
Supplemental Figure 1: *CDC administered mice show reduced inflammation following pneumonia.* Cytokine concentrations in the BAL and lungs were determined by ELISA (n=16). The levels of MCP-1 (a-b), MCP-5(c-d), IL-4 (e-f), IL-13 (g-h), IFN-γ(i) and RAGE (j-k) were measured. Statistical analysis was performed at each time point; samples were analyzed using two-tailed unpaired t-test with Welch's correction (*p<0.05 CDC vs. *KP) (#p*<0.05 *KP* vs. *KP*+CDC).
