

Course Formulation of Surgery and Applied Sciences — Anesthesiology

Andrea Bouwhuis

2018

UMMS Capstone for Impact

Branch: Systems Based, Hospital Based

Project Summary

Creating the one week anesthesiology clerkship course for the new Clerkship X. I am working on this with Dr. Wixson and fellow student TJ Biel.

Action Items/Outcome

Create core content outline for students and teachers, coordinate with faculty for lecture content, organize orientation, and overall set up the week long course.

Conclusion/Reflection

This is going really well so far. We have all of the core content outlines written and being edited by faculty/residents. We have developed a student workbook that will help outline what is expected over the week and will give students a place to take notes on key concepts. We plan to do a trial run with rising M4s in March and will be pitching the course to the Anesthesiology department.
