

Call for Information about Microcomputers

Educational Measurement: Issues and Practice wishes to publish articles, features and other useful information about the application(s) of microcomputers to testing, measurement, and assessment. We are developing a special issue devoted to this topic. We also plan to publish relevant articles and features regularly in various issues of *EM*.

In order to develop these plans, I need *your* help. I need information about software that has been developed and/or is being developed for using microcomputers to enhance testing; I need information about persons who are developing such software for microcomputers; I need information about continuing "sources" of information; I need suggestions of persons who could contribute to this effort. Please keep in mind that *EM* is a publication focusing on *practices* and *applications*, rather than on theory or on hardware, and that *EM* is a publication focusing on testing and measurement, rather than on curriculum and instruction. With these caveats in mind, please fill out the form on this page and send it to me no later than July 1, 1983.

Microcomputers and Testing

Frank Womer

Software

Name of Product _____

Function of Product _____

Computer Requirements _____

Address for Information about Product _____

Individuals Professionally Active in the Area of Microcomputers in Testing

Name _____

Address _____

Area of Specialization _____
(describe)

Projects Addressing Microcomputer Applications in Testing, Measurement, Assessment

Name of Project _____

Organization/Person Conducting Project _____

Address _____

Purpose of Project _____

Project Beginning and Ending Dates _____

Additional information/comments/suggestions will be welcome.

Feel free to reproduce this form for others. NCME membership is NOT a requisite.
