The objective of the standards database projects has been to develop and maintain a compendium of standards (from international, national, government and regulatory bodies) that have relevance to the U.S. shipbuilding and repair industry. The first project in the current series was reported as NSRP 0361. It had standards titles, numbers, and issuing organizations cross-referenced by Ship Work Breakdown Structure (SWBS) numbers. The second was NSRP 0456 and was intended as a follow-on to NSRP 0361, but the timing was such that 0456 was essentially a new database index. This report is another new database index of shipbuilding-related standards. It is an expanded and updated version of 0456 with over 37,000 (up from 17,000) standards listed. This database should provide shipyards and related marine industries with a ready reference to standards that are of use to shipbuilding, and avoid the development of new standards where acceptable standards exist.

EXECUTIVE SUMMARY

The objective of the standards database projects has been to develop and maintain a compendium of standards (from international, national, military, and regulatory bodies) that have relevance to the U.S. shipbuilding, repair and related industries. The first compendium in the current series was reported as NSRP 0361 and accomplished to replace an older database (NSRP 0088) that was available only in printed form. It has standards titles, numbers, and issuing organizations cross-referenced by Ship Work Breakdown Structure (SWBS) numbers and contains about 10,400 titles. It is still available on a single 3.5 inch floppy disk but has been superseded by the current report. The second compendium was NSRP 0456 and was intended as a follow-on to NSRP 0361, but the timing was such that 0456 was essentially a new database index with 17,000 standards. It is still available on two (2) 3.5 inch floppy disk but has also been superseded by the current report

This Phase II (contractually Phase II of the same contract that produced report NSRP 0456) is a new database index of shipbuilding related standards. It is an expanded and updated version of 0456 with over 37,000 standards indexed and cross-referenced by SWBS numbers. This database should provide shippards and related marine industries with a ready reference to standards that are of use to shipbuilding, and avoid the development of new standards where acceptable standards exist

The database is accessible directly from the World Wide Web at:

http://www.umich.edu/~umtrimsd/docctr/edocs/index.htm

and can be downloaded and installed on a personal computer of reasonable capacity (486/66 minimum) that runs Microsoft Windows 95® or Windows NT®. It is basically a Microsoft ACCESS® database packaged with a stand alone search engine. It can also be loaded into the Microsoft ACCESS® software and searched through that program.

INTRODUCTION and BACKGROUND

This report is a product of a program directed by the National Shipbuilding Research Program (NSRP) and the Ship Production Committee (SPC) of the Society of Naval Architects and Marine Engineers (SNAME). Newport News Shipbuilding was the prime contractor, with the University of Michigan Transportation Research Institute (UMTRI) working under a subcontract.

Under the SPC Panel SP-6 proposal, the technical objective of this project is to maintain and expand a compendium of standards (international, national, military, and regulatory) that have relevance to the U.S. shipbuilding and repair industry. The intended benefits are to provide shippards with a ready reference to standards that are of use to shipbuilding and to eliminate the need for development of new standards where acceptable standards exist.

The project was performed at UMTRI by Albert W. Horsmon, Jr. and Scott B. Clapham. Thomas Lamb was project director.

Standards are a key element in the efficient design, construction, and repair of ships and vessels in all shipyards. As a result, there is a continuous need by many designers, engineers, managers, and other people associated with marine work to reference standards from a wide range of regulatory bodies, government agencies, technical societies, and private industry groups. For this database, standards include:

- Consensus standards, such as those developed by the American Society of Testing and Materials (ASTM),
- Government regulations and requirements, such as U.S. Coast Guard regulations,
- Military Specifications (MilSpecs), and
- Related rules requirements.

Traditional methods of locating standards center around referencing many documents and books of standards issued by diverse individual organizations. Copies of the standards on microfiche may have reduced the volume of the references but not the difficulty in searching for information. Computerized versions of the standards made searches faster, but frequently gave users more information than they needed for initial investigations. This can be not only time consuming, but may result in either not finding a standard or developing a new standard where a suitable one may already exist.

The first shipbuilding standards compendium for the NSRP was completed as NSRP 0088 in September of 1979 under an NSRP Project titled "A Compendium of Shipbuilding Standards." It was produced as a hard copy database with 2,580 entries, predominately from domestic agencies. It was issued in hard copy format sorted by four methods, but without provision for maintenance. In a short period of time it was outdated.

As a result, the Marine Industry Standards Panel (SP-6) of the Ship Production Committee of SNAME identified the need for a computerized compendium of standards pertinent to shipbuilding and ship repair. The first project in the current series was reported as NSRP 0361 in 1992. It has standards titles, numbers, and issuing organizations cross-referenced by Ship Work Breakdown Structure (SWBS¹) numbers. It contains about 10,400 titles from 50 organizations, both domestic and international. The database was supplied compressed on a single floppy disk as a Borland

¹ SWBS - Ship Work Breakdown Structure. A systems-oriented coding structure used by the U.S. Navy to classify components from design through the life of the ship. A listing is provided in the Appendix.

dBASE IV[®] file, overcoming some of the limitations of the earlier project. It is still available on a single 3.5 inch floppy disk but has been superseded by the current report.

As standards changed, the NSRP 0361 database became somewhat outdated. The SP-6 Panel recognized the need for maintenance of this (NSRP 0361) database and planned a follow-on maintenance project, but the follow-on project was not funded until nearly two years later. The maintenance project was planned as a two year project. NSRP 0456 (the Phase I report) was intended as the follow-on to NSRP 0361, but the timing was such that NSRP 0456 was essentially a new database index with 17,000 standards. NSRP 0456 is supplied compressed onto two floppy disks in a number of different database formats as requested by subscribers. However, it has also been superseded by the current report

This report completes Phase II of the maintenance project and is an expanded and updated version of the NSRP 0456 database, with over 37,000 standards indexed and cross-referenced by SWBS numbers. The database is available directly from the World Wide Web and can be downloaded and installed on a personal computer of reasonable capacity. A minimum of a 486/66 machine with 16M of RAM should be used to look at the database. It is basically a Microsoft ACCESS® database packaged with a stand alone search engine.

GETTING TO THE DATABASE

To access the Phase II Standards Database for Windows 95 and NT machines, on the World Wide Web go to:

http://www.umich.edu/~umtrimsd/docctr/edocs/index.htm

Once there click on NSRP Report 0488 - it will download the zipped file to your desktop. These instructions or updates to them are also located there.

To access the Standards Database through an FTP server go to the FTP site:

141.211.187.96

Log in as "anonymous," use your email address as the password. Once into the site, open the folders "doccen" and in doccen open "reports." In the reports folder download the one titled DBinstal.zip to your desktop.

On your desktop, double click the DBinstal.zip folder and your host unzip program will unzip the files into the specified folder. In the unzipped group of files, find and double click the "setup.exe" file and it will create a StandardsDB folder on your C drive. After the files are installed, Double Click the Standards.exe file in the StandardsDB folder and you should be ready to search.

More complete instructions, including special search instructions, are in Appendix A. Appendix B is a listing of SWBS numbers and titles. Appendix C is a listing of the organizations whose standards are listed in the database and the acronyms used to identify them. Appendix D has sample printouts from the database

CONCLUSIONS

The Phase II standards database is an easy to use comprehensive index of marine related standards that should give the user a good first cut at finding which standards are applicable to a specific subject.

Appendix A

Installation and Usage Instructions

OBTAINING THE DATABASE

To access the Phase II Standards Database for Windows 95 and NT machines, on the World Wide Web go to:

http://www.umich.edu/~umtrimsd/docctr/edocs/index.htm

Once there click on NSRP Report 0488 - it will download the zipped file to your desktop. These instructions or updates to them are also located there.

To access the Standards Database through an FTP server go to the FTP site:

141.211.187.96

Log in as "anonymous," use your email address as the password. Once into the site, open the folders "doccen" and in doccen open "reports." In the reports folder download the one titled DBinstal.zip to your desktop.

To obtain some other form of the database, contact UMTRI directly or by email at seai@umich.edu.

INSTALLATION

Run the installation program, "Setup.exe." The program must be installed in the directory C:\StandardsDB." The setup program will install a number of files on the computer. Dynamic Link Libraries (DLLs) will be placed in your Windows directory. The executable file, "StandardsDB.Exe," will be placed in C:\Standards, and the database of standards, DB2.Mdb, will be placed in C:\StandardsDB

USAGE

Without the Search Utility

The standards database, DB2.Mdb, is a Microsoft ACCESS 7.0[®] database. It can be opened and modified like any other ACCESS database. It may also be opened in any other compatible database program.

With the Search Utility

The Search Utility that has been included with the database allows users to search by any combination of criteria, and view and print the results in three different formats.

There are four different titled criteria that can be used for searching: SWBS number, entering a keyword in the "Title" box, "Originating Organization," and "Standard Number." To search by a criterion, the corresponding box on the left must be checked and a search criterion entered. The search criterion may be an exact entry, such as for the SWBS field "120," or it may include wildcard characters such as *, ?, and #. The most powerful wildcard operator is the *. To search for all standards with the word "pipe" anywhere in their title the following (without quote marks) would be entered into the box to the right of the keyword, "*pipe*." Examples of the other more restrictive operators are given below.

Kind of match	Pattern	Match	No Match
Multiple characters	"a*a"	"aa", "aBa", "aBBBa"	"aBC"
	"*ab*"	"abc", "AABB", "Xab"	"aZb", "bac"
Special character	"a[*]a"	"a*a"	"aaa"
Multiple characters	"ab*"	"abcdefg", "abc"	"cab", "aab"
Single character	"a?a"	"aaa", "a3a", "aBa"	"aBBBa"
Single digit	"a#a"	"a0a", "a1a", "a2a"	"aaa", "a10a"
Range of characters	"[a-z]"	"f", "p", "j"	"2", "&"
Outside a range	"[!a-z]"	"9", "&", "%"	"b", "a"
Not a digit	"[!0-9]"	"A", "a", "&", "~"	"0", "1", "9"
Combined	"a[!b-m]#"	"An9", "az0", "a99"	"abc", "aj0"

The abbreviation for the organization search criterion may be entered manually or selected from the drop down list. Once a search has been completed the number of matches is displayed on the right side of the screen. The user may then view the results ordered by Standard Number, Organization, or SWBS by clicking on the appropriate radio button and clicking the "View Results" button. The results will be displayed in a new window. This window can be printed by clicking on the printer icon. The results can be paged through by clicking on the arrows. The view can be zoomed in and out by clicking on the magnifying glass icon. When the user has finished viewing the results the "Close" button should be pressed and the Search Utility will be displayed.

The Search Utility also allows the user to search the results of a previous query. This allows more than one keyword to be used. To search the results of the last query for additional criteria, select the "Search Previous" option, enter the new criterion, and click the "Search Database" button.

MAINTAINING THE DATABASE

Users who would like to add additional standards to the database may do so using Microsoft Access 7.0. The Standards Database is entitled DB2.Mdb. Any number of records may be added or deleted and the field entries modified. However, the layout of the table must remain the same and the field names must not be changed.
