

Supplement C: Additional Tables

Supplementary Table S.C.1. Mean (1 SD) change in biomass (kg/ha) of species groups from the baseline simulation without AC for different scenarios. Scenarios are as follows: high detritus in the AC diet (AC_HD), low detritus in the AC diet (AC_LD), no detritus in the AC diet (AC_ND), larval fish in the AC diet (AC_LF), and high phosphorus loads (AC_HP). An asterisk indicates the baseline simulation for this scenario was the simulation without AC but with high phosphorus loads. See Table 1 for full species group names.

Supplementary Table S.C.2. Mean (1 SD) percent change in biomass of species groups from the baseline simulation without AC for different scenarios. The scenarios include: high detritus in the AC diet (AC_HD), low detritus in the AC diet (AC_LD), no detritus in the AC diet (AC_ND), larval fish in the AC diet (AC_LF), and high phosphorus loads (AC_HP). An asterisk indicates the baseline simulation for this scenario was the simulation without AC but with high phosphorus loads. Changes greater than $\pm 25\%$ were highlighted. See Table 1 for full species group names.
