

Table Appendix S9: Phylogenetic β -diversity output statistics. Table summarizing results of decomposed UniFrac index for each summit pair with all species collected above treeline (All Alpine) or just species found on talus slopes (Talus): observed UniFrac distance (UniFrac), observed component of UniFrac distance describing species replacement (UniFrac Turn), observed component of UniFrac distance describing species nestedness (UniFrac PD), standardized effect size (SES) comparing observed UniFrac distance to expected from shuffling the phylogeny tips (SES UniFrac), SES component of UniFrac distance describing species replacement (SES UniFrac Turn), SES component of UniFrac distance describing species nestedness (SES UniFrac PD).
