

Supplemental Figure 1

Supplemental Figure 1. Effects of HDM on AM intracellular SOCS3 and EV release

(A) SOCS3 protein levels in AM lysates (pooled from 5 mice) isolated from HDM-challenged mice 24 h after the second of two consecutive daily intrapulmonary PBS or HDM challenges. (B) Relative EV numbers enumerated in the CM of AMs isolated from the same HDM-challenged mice as in (A), measured by flow cytometry.
