

Supplemental Figure 4

Supplemental Figure 3. Intrapulmonary administration of synthetic liposomes containing recombinant SOCS3 inhibits inflammatory cell recruitment to the lung

(A) Total cell numbers and (B) AM numbers in lavage fluid of OVA-challenged male (green) and female (purple) mice determined 24 h after the second of two consecutive daily intrapulmonary PBS or OVA challenges. Treatment with empty or SOCS3 liposomes occurred 2 h before challenges on both days. * $p < 0.05$, using a two-way ANOVA followed by Sidak's multiple comparisons test.
