34

35 On behalf of the journal, AGU, and the scientific community, the editors would like to sincerely thank  
36 those who reviewed the manuscripts for *Geophysical Research Letters* in 2020. The hours reading and  
37 commenting on manuscripts not only improve the manuscripts but also increase the scientific rigor of  
38 future research in the field. We particularly appreciate the timely reviews in light of the demands  
39 imposed by the rapid review process at *Geophysical Research Letters*. The COVID pandemic imposed  
40 additional stresses on the review process, as many reviewers had to juggle increased family  
41 commitments, hours of online meetings, remote work and instruction, lack of physical access to library  
42 resources, and other hardships to maintain the quality and timeliness of their reviews. Although we  
43 witnessed an increase in the number of submissions, the average number of days to complete a review  
44 increased by less than one day!! That says a lot about the diligence of our reviewers. We deeply  
45 appreciate their contributions in these challenging times. With the advent of AGU's data policy, many  
46 reviewers have also helped immensely to evaluate the accessibility and availability of data, and many  
47 have provided insightful comments that helped to improve the data presentation and quality. We  
48 greatly appreciate the assistance of the reviewers in advancing open science, which is a key objective of  
49 AGU's data policy. Individuals in italics provided three or more reviews for *Geophysical Research Letters*  
50 during the year.

51 In total, 5,177 referees contributed to 8,786 individual reviews. Thank you again. We look forward to the  
52 coming year of exciting advances in the field and communicating those advances to our community and  
53 to the broader public.
