

Welcome GSA Virtual Workshop Attendees!

Analyzing Longitudinal Aging Studies within an Interoperability Environment: The NACDA Data Portal

Plan for Today: 4hr workshop - 4 sessions

- Welcome, intros, technical (5min)
- **Session 1** – NIA Program Priorities – John Phillips (40min)
- 5min Break
- **Session 2** - MIDUS and the MIDUS portal - Barry Radler (45min)
- 20min Break
- **Session 3** - NACDA and the NACDA portal - James McNally, Kathryn Lavender (60 min)
- 10min break
- **Session 4** - Colectica, demo, benefits to using - Jeremy Iverson (45min)
- Open question/discussion (10min)
- End workshop 2pm EST

Our Presenters

- **Dr. John Phillips** - Chief of the Population and Social Processes Branch (PSP) of the NIA Division of Behavioral and Social Research (BSR). During a career spanning over 20 years, John has worked to produce research and data resources on aging related topics.
- **Dr. Barry Radler** - Research background is in quantitative social science with a focus on how information technologies can improve research processes and data. Dr. Radler is currently the Survey Project Manager and Data Management Director for the MIDUS study (www.midus.wisc.edu) at the UW-Madison Institute on Aging.
- **Dr. James McNally** - Director of NACDA for 20 years, researches family support and health among the aged, in the United States and internationally. He also studies the impacts of heterogeneity on health outcomes among elderly U.S. Asian/Pacific Islander populations.
- **Kathryn Lavender** – Data Project Manager for NACDA with 14 years of experience in social science data management.
- **Jeremy Iverson** - Co-founder and partner at Colectica where he helps build software to document statistical data using open standards. Previously, he was a programmer at the Wisconsin Longitudinal Study, working to process, document, and disseminate data for the long-running study. Jeremy is currently an invited expert on the Data Documentation Initiative's (DDI) Technical Committee.

NACDA Session

- Why Interoperability?
- Intro to NACDA
- Intro to NACDA Colectica Portal
- How to Download Data from the NACDA Portal – Customized Datasets
- How to Search the NACDA Site
- How to Download Data from the NACDA Site – Whole Datasets
- Related Publications
- How to Cite the Data You Use
- How to Share Your Data

We will share these slides from our NACDA announcements page after the conference.

In Search of a Superpopulation

The superpopulation and the finite population concepts are compatible if one views the finite population labels (which are needed to allow specific units to be sampled) to be part of the superpopulation model. Doing so, the final sample can be thought of as the result of a two-step process:

First, the finite population is selected from a superpopulation according to the superpopulation model.

Then, after each unit is identified with a label and related information, a sample design is formed and the final sample of units is selected. The measured characteristics are known only for the final sample. However, other information, such as the information used as part of the sample design, will be known for the **entire finite population**.

Step 1: Metadata

ICPSR has produced study descriptions, or metadata records, describing its holdings since the organization began in 1962. In the 1980s the metadata records were converted to a standardized, fielded text format. In 1999, ICPSR received an NSF Infrastructure in the Social Sciences award (SES-9977984), which enabled us to enrich the content of the records and to convert them to XML. In 2006, ICPSR, in partnership with the University of Michigan Library, produced MARC records for its collection. More recently, ICPSR has added machine-readable schema.org markup in JSON-LD format to dataset landing pages.

About ▾

Powered by DDI

The SSVD builds on a pilot project funded by the National Science Foundation. It demonstrates the benefits of using structured variable-level documentation in XML, tagged according to the Data Documentation Initiative [↗](#) standard.

Search/Compare Variables

The Social Science Variables Database (SSVD) enables ICPSR users to examine and compare variables and questions across studies or series. The SSVD currently includes over 5 million variables, representing about 76% of ICPSR's holdings that have quantitative data described in statistical syntax.

The SSVD does not include our entire collection. For a comprehensive search of all datasets, use our [main data search](#), which indexes all of the documentation available for our studies, including the variable descriptions.

- [Browse by Study](#)
- [Browse by Series](#)

Comparing Variables

Select checkboxes, and then select "Compare" from the Actions button. This will take you to a screen where you can compare the details of the variables you chose.

Search Tips

- Enter words or strings that are likely to appear in a variable name, label, question, and value labels:

Presidential election will return variables dealing with all presidential elections

Presidential election Obama will return only variables dealing with the 2008 and 2012 presidential elections

- Use quotes to search for specific phrases:

"life satisfaction" "minority rights" "community programs"

- The minus sign may be used to remove certain types of results:

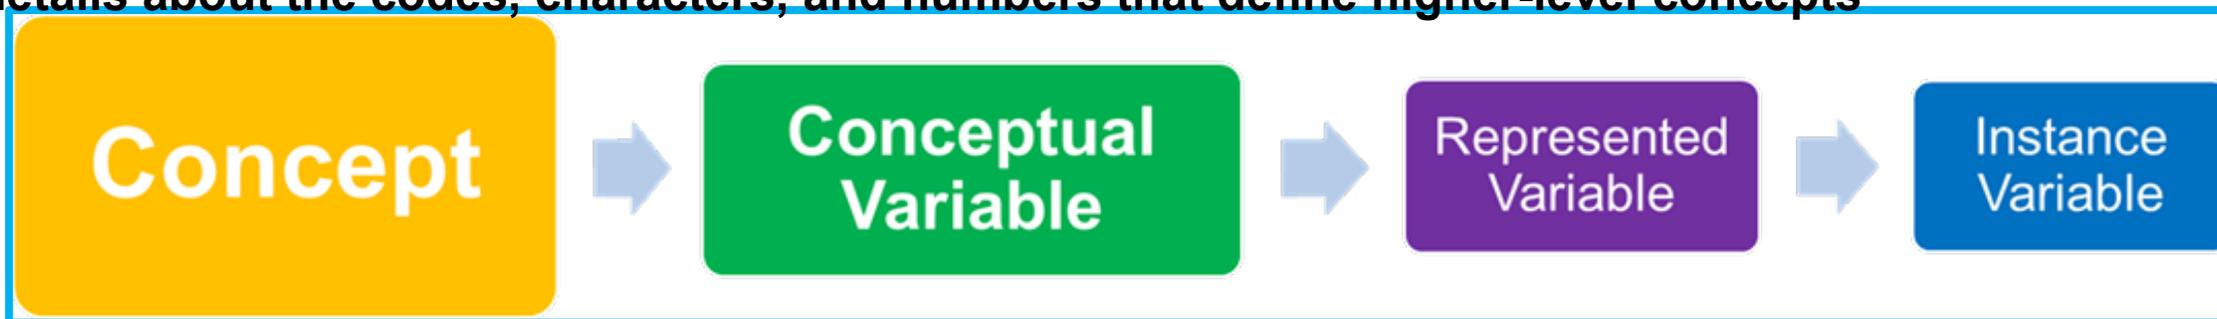

"Presidential debate" -"Bill Clinton"

Step 3: Research Frameworks

Research data is used in a systematic manner to build models that measure specific activities, populations, or behaviors of interest. To accomplish this, researchers use frameworks that attempt to capture and model outcomes that follow theoretical pathways. To build and analysis model based on a specific research framework such as Social Determinants of Health, the analyst needs access to a specified set of variables. NACDA seeks to organize and present variables commonly used in research frameworks using Variable Cascades.

The variable-cascade is an essential tool for organizing compatibility across longitudinal study waves and creating cross-study linkages for related, though independent studies. Variable-cascades consist of four levels, each level corresponding to more detailed descriptions. The levels also indicate the main focus of the descriptive label. The Concept and Conceptual Variable provide details about the concepts employed. The Represented Variable and Instance Variable provide details about the codes, characters, and numbers that define higher-level concepts

Step 4: Harmonization and Quasi-Harmonization

NACDA Concordance Sheet for Levels of Conceptual Variable Comparability

	A	B	C
1	Topical Groups and Subgroups	NEW Cross-Series Conceptual Items	Comparability note:
26	Respondent demographics	Number of stepchildren	Comparability: one to many
27	Respondent demographics	Number of sons	Comparability: directly comparable
28	Respondent demographics	Number of daughters	Comparability: directly comparable
29	Respondent demographics	Born in the US	Comparability: need harmonization
30	Respondent demographics	Financial status in childhood	Comparability: need harmonization
31	Respondent demographics	Lived with both parents in childhood	Comparability: related concepts
32	Respondent demographics	Health status in childhood	Comparability: need harmonization
33	Respondent demographics	Gender of partner	Comparability: directly comparable
34	Respondent demographics	Education of spouse or partner	Comparability: need harmonization
35	Respondent demographics	Internet use	Comparability: related concepts
36			
47			
48	Social life	Size of social network	Comparability: need harmonization
49	Social life	Socializing with friends or family	Comparability: related concepts
50	Social life	Volunteer work	Comparability: related concepts
51	Social life	Attending organized group activities	Comparability: related concepts
52	Social life	Attending religious services	Comparability: related concepts
53	Social life	Total years lived in current neighborhood	Comparability: directly comparable
54			
55	Biomeasures	Current weight	Comparability: directly comparable
56	Biomeasures	Waist measurement final status	Comparability: related concepts
57	Biomeasures	Waist measurement (inches)	Comparability: directly comparable
58	Biomeasures	Height	Comparability: one to many
59	Biomeasures	Height (feet)	Comparability: one to many
60	Biomeasures	Height (inches)	Comparability: one to many

What is NACDA?

- The National Archive of Computerized Data on Aging
- **Free data** on aging resources and data user support
- Preserving and sharing data resources for 35+ years
- Part of ICPSR, ISR at the University of Michigan
- Funded by the National Institute on Aging (NIA)

Metadata Levels at NACDA, ICPSR

We are going to be talking today about Variable-Level Metadata efforts, but there are many types of and purposes for metadata, and often you need one to effectively assess and use the other. NACDA and ICPSR typically work with:

- **Series-level** – a series is a set of studies intended to be used together; series metadata describe several studies and can include topics, timeframes, and anything else that applies to all of the studies that belong to a series.
- **Study-level** – a study at NACDA and ICPSR is a unique data collection which can be comprised of a single or multiple datasets, questionnaires, etc. Study metadata would be the title, universe, methodology, sampling, collection dates, subject terms...
- **File-level** – file metadata describes a specific file within a series, study, project, etc. (this is an area we are currently developing further); it can include version, filetype, etc.
- **Variable-level** – variable metadata gives context to the data points in a dataset, and includes the variable label, value labels, values, related question/record info, etc.

NACDA Preserves, Provides, and Promotes Longitudinal Data on Aging Resources

What's in the NACDA Portal?

- National Social Life, Health, and Aging Project (NSHAP) public data and metadata – 3 Rounds
- National Health and Aging Trends Study (NHATS) metadata – 8 Rounds
- Midlife in the United States (MIDUS) metadata – M1-M3, Refresher, Milwaukee studies
- Comparisons across NSHAP – NHATS and NSHAP-MIDUS at the variable level, organized by concept
- Data can be downloaded as CSV or SPSS formats; metadata documentation can be downloaded as PDF, CSV, Excel, or DDI-3.3 XML

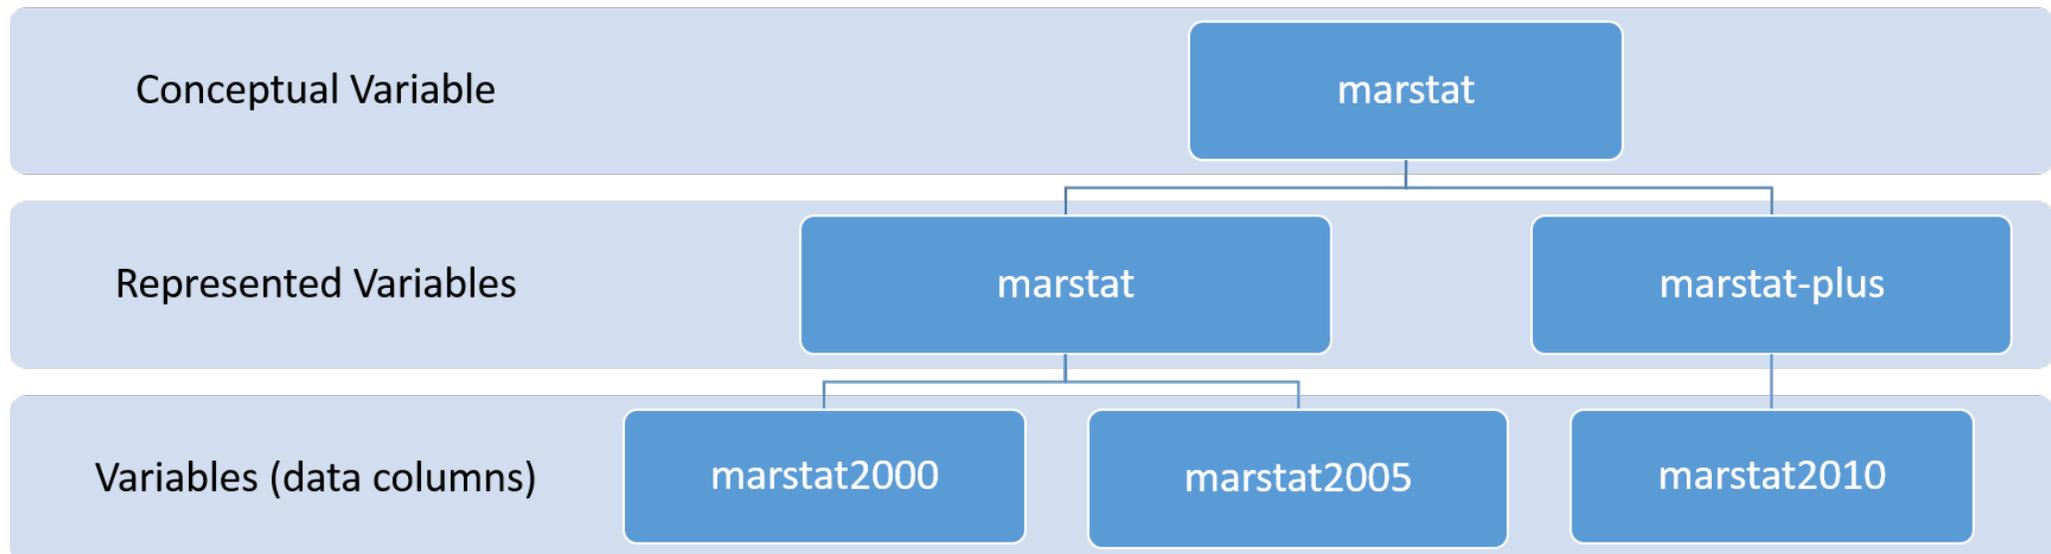

What is the Process?

- We identify longitudinal data collections with publicly accessible data, which are nationally representative, funded by NIA, and with cognition, Alzheimer's, dementia, and biomeasures variables in particular but that overall have a broad range of potential research uses.
- We start with a variable crosswalk organized by topic – this is often created in Excel.
- From there, the metadata specialist creates a conceptual concordance file.
- After that, we send the materials, data, concordance, any DDI files we have, to the Colectica team and they make the comparisons appear in the portal.

A Bit More about the “How”

The concordance file needs to outline the variables, represented variables, and conceptual variables. Additionally, when you have multiple series, we include comparability type.

- **Variable:** A column in a dataset.
- **Represented Variable:** Describes how a variable is measured; the data type. This may be consistent across rounds, or may change.
- **Conceptual Variable:** Describes a measurement of a person, firm, or other thing, without specifying the data type. The most generic way to describe something that is measured.

What's Next for the Portal?

- We are applying for more funding to support enhancing the portal.
- We want to add more data to the portal.
 - TILDA, ACL, HAALSI, and more
- We want to add more variable-level metadata comparisons to the portal (cross-series comparisons).
- We want to figure out how to properly preserve the materials related to the portal work.
- We hope to assist in establishing social science Common Data Elements (CDEs) on aging and related health topics.

Project Description

Alternate Title

NSHAP Round 1

Summary

The National Social Life, Health and Aging Project (NSHAP) is the first population-based study of health and social factors on a national scale, aiming to understand the well-being of older, community-dwelling Americans by examining

By creating a MyData account, you can:

- Download data and use online analysis tools
- Download data available only to ICPSR members, if you are from a [member institution](#)
- Generate utilization reports and download statistics
- Update your account profile and settings
- Access your past searches, downloads, and deposits (forthcoming)
- Access Summer Program registration and history of courses taken (forthcoming)

Or one of these:

Please note that logging in through LinkedIn may require additional setup. Please follow the instructions provided by LinkedIn.

- It's **free**
- Very little info is needed
- We **do not** spam you or sell your data

Download Data - Steps

- Select the files you want
- Agree to the terms of use
- Make sure you are logged in to your MyData Account
- Check your downloads folder

The screenshot shows two overlapping File Explorer windows. The top window displays the 'Downloads' folder, which contains a file named 'ICPSR_20541-V9.zip'. The bottom window shows the contents of the compressed folder 'ICPSR_20541', listing various files and folders with their compressed sizes.

Name	Type	Compressed size
DS0001	File folder	
DS0003	File folder	
DS0007	File folder

Featured

The NSHAP data are available in the [NACDA Colectica Portal](#) where data users can search across the rounds and create custom data and documentation extracts.

In this portal, data users will also find that we have compared NSHAP to NHATS and NSHAP to MIDUS to identify comparable variables within concepts such as health and cognition.

Please note that you will need new login credentials to access the portal as it is not accessible with your MyData login credentials.

Have You Used NACDA or ICPSR Data? Submit Your Citation to Us

Email us at icpsr-nacda@umich.edu or [use our ICPSR citation submission form](#) that provides the citation directly to our bibliography team. Your publication will be linked to the data you used and become part of our bibliography database!

How to Share Your Data – “Deposit”

The screenshot shows the NACDA website interface. At the top left, the logo 'NACDA' is displayed next to the text 'National Archive of Computerized Data on Aging'. In the top right corner, the name 'Kathryn Lavender (logout)' is visible. Below the header, there is a navigation bar with a 'Search' button and a 'Deposit Data' dropdown menu. A blue arrow points to the 'Deposit Data' menu, which is open, showing options: 'Deposit', 'NACDA Aquisitions Policy', 'Tips for Depositing Data', and 'FAQ'. Below the navigation bar, there is a large image of an elderly woman with a walker. To the right of the image is an 'About Us' section with text describing the organization's mission and services. At the bottom of the page, there are three columns: a Twitter feed for @NACDA_Aging, a video player titled 'NACDA Overview' with a play button, and a 'News and Announcements' section with a list of recent news items and a 'Subscribe to News' button.

How to Deposit with NACDA

Deposit Data - NACDA welcomes and encourages deposits of digital data on aging.

Deposits are made using a secure form to describe the data collection and upload content. Users must have or [create a MyData](#), Facebook, or Google account to sign in to the deposit form.

NACDA has two options for sharing your data!

Use this [decision tree](#) to determine which option best meets your needs — NACDA curated or the NACDA Open Aging Repository (NACDA-OAR).

NACDA National Archive of Computerized Data on Aging

NACDA offers curation services as staff obtain, process, preserve, and disseminate electronic data to researchers for secondary analysis in aging research. After a data collection is deposited with NACDA, the data and documentation will be reviewed, enhanced, and made available in several widely used formats, including ASCII, tab-delimited (for use with Excel), SAS, SPSS, and Stata. Documentation is provided as PDF.

Deposit to NACDA

NACDA OAR

The NACDA-Open Aging Repository (NACDA-OAR) offers free self-publishing options for gerontological researchers to share their research projects. Data collections published in NACDA-OAR are immediately distributed as-is for research use in the same condition and format submitted by the depositor.

Deposit to NACDA-OAR

Tips for Preparing Data for Deposit at NACDA

Providing a Complete Deposit

What Happens After Depositing

Data Management Plans Resources

The main idea is to provide **complete** data, documentation, and metadata (study level and variable level) so that your data can be easily reused and replicated. Preparing your data will help reduce the time it takes to fully curate it, increase secondary usage, ensure consistency in use across statistical packages, and ultimately stand the test of time against changes in software. **How do you ensure your materials are "complete"? What should your deposit include?** Review our [Data Sharing Best Practices for NIA Funded Research](#).

Need help assessing how to prepare your materials or address data confidentiality? Please [contact us](#).

Review our [Depositor Agreement](#) and [Depositor Checklist](#) (based on best practices) for more details.

Refer to our "Data
Sharing Best Practices"

About the NACDA - Open Aging Repository

The NACDA - Open Aging Repository (NACDA-OAR) from the National Archive of Computerized Data on Aging (NACDA) offers free self-publishing options for gerontological researchers to share their research projects. Data collections published in the NACDA-OAR are immediately distributed as-is for immediate research use. NACDA-OAR services are primarily meant to be a resource for NIA-funded projects, although all aging-related data may use the service.

NACDA-OAR self-publications should include all data, annotated program code, command files, and documentation that are needed to replicate research findings. For general instructions for publishing data, see the [NACDA-OAR Deposit Instructions](#). For best practice in preparing data for sharing, please refer to [ICPSR's Guide to Social Science Data Preparation and Archiving](#).

[Start Your Deposit](#)

NACDA's Role

NACDA does not alter datasets deposited in NACDA-OAR in any way. Data are distributed in the same condition and format submitted by the depositor.

NACDA-OAR is one of many services provided by the [NACDA Program on Aging](#) to archive and promote gerontological research, aging health and a better understanding of the life course. Please contact NACDA at icpsr-nacda@umich.edu with any questions you might have about your data and archiving options.

NACDA staff may review data deposited and published to the NACDA - Open Aging Repository at random. If any issues are found during these random reviews, NACDA will contact depositors to remediate the concerns. In the event any data contain direct identifiers or pose a risk to respondent anonymity, NACDA reserves the right to make the data unavailable.

Confidentiality and Copyright

Researchers publishing data in NACDA-OAR are entirely responsible for ensuring the confidentiality of their research subjects. Self-publishers are also required to affirm that they have the right to publish this material. NACDA-OAR requires written permission for distribution of data, but copyright remains with the author.

Why Self Publish with NACDA-OAR?

- Great for code sharing and replication data
- You control the content and version control
- Quick availability and DOI
- Discoverable through ICPSR and NACDA site searches
- Track usage of your project

Subscribe to Our Newsletter

The National Archive of Computerized Data on Aging (NACDA), located within ICPSR, is funded by the National Institute on Aging. NACDA's mission is to advance research on aging by helping researchers to profit from the under-exploited potential of a broad range of datasets.

NACDA acquires and preserves data relevant to gerontological research, processing as needed to promote effective research use, disseminates them to researchers, and facilitates their use. By preserving and making available the largest library of electronic data on aging in the United States, NACDA offers opportunities for secondary analysis on major issues of scientific and policy relevance.

The NACDA staff represents a team of professional researchers, archivists and technicians who work together to obtain, process, distribute, and promote data relevant to aging research.

NACDA Podcast 1

The focus of the NACDA Podcast Series and Researcher Interviews is to connect with the gerontological research community. We will highlight data resources, researchers and principal investigators in order to talk through data concerns as well as learn the stories behind the projects. Have suggestions or questions? Email us at icpsr-nacda@umich.edu.

Recap

- We are working to make data on aging resources interoperable to further the potential research use
- NACDA represents **FREE** data on aging and resources to the research community
- Check out our Colectica portal for cross-series comparisons and custom data extracts
- Visit nacda-aging.org for whole datasets and data user support
- Make sure to check our related publications to see what's happening with the data
- Contact us if you have used data we host in your publication so we can link it to the study
- Share your data and code with us – visit our deposit page for details
- Sign up for our quarterly newsletter to stay in the know
