## Supplemental Information

## Supplemental Figures

Figure S1. Random forest number of trees optimization, based on cross validation. AUC is shown vs. number of trees. Error bars represent the standard error. The number of trees selected (500) improved performance by $0.05 \%$ over the previous value.

Figure S2. Distributions of numbers of mutations per gene, for benign (blue, lower) and pathogenic (orange, upper) mutations. A) Leftmost portion of distribution. B) Rightmost portion of distribution.

Figure S3. Number of mutations for each residue type, for benign (blue, lower) and pathogenic (orange, upper) mutations. A) Amino acid mutated from (WT residue type). B) Amino acid mutated to (mutant residue type).

Figure S4. Histograms of topological information for mutations from the ADDRESS database. Blue (foreground, top) indicates pathogenic mutations, yellow (foreground, bottom) indicates benign mutations, and gray (background, both panels) indicates all residues within proteins in the database. A) Number of residues in contact with the mutated residue ( 6 or more atom-atom contacts within 5 Angstroms). B) Number of contacts in cross relation with a contact formed with the mutated residue. C) Number of contacts in inverse parallel relation with a contact formed with the mutated residue. Additional features are shown in Figure S1.

Figure S5. Histograms of topological information for mutations. Colors are as in Figure S2. A) Local contact order, defined as the mean interchain distance to contacting residues. B) Number of contacts in parallel relation with a contact formed with the mutated residue. C) Number of contacts in series relation with a contact formed with the mutated residue.

Figure S6. Topological measures for proteins in essential and non-essential genes. Top: essential genes. Bottom: non-essential genes. A) Number of residues in contact with the mutated residue. B) Number of contacts in cross relation with a contact formed with the mutated residue. C) Number of contacts in inverse parallel relation with a contact formed with the mutated residue.

Figure S7. Topological measures for proteins in essential and non-essential genes. Top: essential genes. Bottom: non-essential genes. A) Local contact order. B) Number of contacts in parallel relation with a contact formed with the mutated residue.

Figure S8. Relations information by residue type. ds: disulfide. Residue types are ordered according to values for pathogenic mutations. A) Mean number of inverse parallel relations divided by mean number of parallel relations. B) Mean number of cross relations.

Figure S9. Comparison of cross relation to structural features from MISCAST database. A) Histogram of number of cross relations for residues exhibiting coil, sheet, and helix secondary structures. T-test p-value for helix to coil: $1 \times 10^{-7}$, helix to sheet: 0.03 , coil to sheet: $9 \times 10^{-12}$. B) Two-dimensional histogram showing relative accessible surface area vs. number of cross relations. $r=-0.35, p=6 \times 10^{-144}$.

## Supplemental Tables

Table S1. Numbers of genes and mutations with specific GO annotations

|  | GO_term_ID | GO_term_def | NGenes | NMutations |
| :--- | :--- | :--- | :--- | :--- |
| 1 | GO:0043167 | ion binding | 1494 | 13084 |
| 2 | GO:0019899 | enzyme binding | 599 | 4940 |
| 3 | GO:0003677 | DNA binding | 380 | 2530 |
| 4 | GO:0016301 | kinase activity | 319 | 2183 |
| 5 | GO:0003723 | RNA binding | 302 | 1356 |
| 6 | GO:0016491 | oxidoreductase activity | 272 | 3252 |
| 7 | GO:0030234 | enzyme regulator activity | 257 | 1542 |
| 8 | GO:0008092 | cytoskeletal protein binding | 213 | 1583 |
| 9 | GO:0008289 | lipid binding | 210 | 1934 |
| 10 | GO:0008233 | peptidase activity | 174 | 1359 |
| 11 | GO:0008134 | transcription factor binding | 163 | 1190 |
| 12 | GO:0003700 | DNA-binding transcription factor activity | 162 | 1142 |
| 13 | GO:0005198 | structural molecule activity | 108 | 898 |
| 14 | GO:0022857 | transmembrane transporter activity | 107 | 929 |
| 15 | GO:0016887 | ATPase activity | 97 | 1043 |
| 16 | GO:0004518 | nuclease activity | 75 | 336 |

| 17 | GO:0016791 | phosphatase activity | 73 | 345 |
| :--- | :--- | :--- | :--- | :--- |
| 18 | GO:0016829 | lyase activity | 73 | 663 |
| 19 | GO:0008168 | methyltransferase activity | 65 | 358 |
| 20 | GO:0003924 | GTPase activity | 58 | 499 |
| 21 | GO:0042393 | histone binding | 54 | 178 |
| 22 | GO:0016874 | ligase activity | 54 | 465 |
| 23 | GO:0016757 | transferase activity transferring glycosyl groups | 52 | 500 |
| 24 | GO:0016853 | isomerase activity | 52 | 606 |
| 25 | GO:0030674 | protein binding bridging | 51 | 438 |
| 26 | GO:0016810 | hydrolase activity acting on carbon-nitrogen <br> (but not peptide) bonds | 51 | 279 |
| 27 | GO:0016746 | transferase activity transferring acyl groups | 50 | 292 |
| 28 | GO:0016798 | hydrolase activity acting on glycosyl bonds | 44 | 1121 |
| 29 | GO:0016779 | nucleotidyltransferase activity | 43 | 351 |
| 30 | GO:0004386 | helicase activity | 38 | 201 |
| 31 | GO:0003729 | mRNA binding | 35 | 200 |
| 32 | GO:0032182 | ubiquitin-like protein binding | 29 | 144 |
| 33 | GO:0051082 | unfolded protein binding | 28 | 95 |
| 34 | GO:0016765 | transferase activity transferring alkyl or aryl <br> (other than methyl) groups | 25 | 272 |
| 35 | GO:0008135 | translation factor activity RNA binding | 10 | 15 |
| 36 | GO:0019843 | rRNA binding | 7 | 31 |
| 37 | GO:0003735 | structural constituent of ribosome | 3 | 10 |
| 38 | GO:0030555 | RNA modification guide activity | 0 | 0 |
| 39 | GO:0030533 | triplet codon-amino acid adaptor activity | 0 | 0 |

Table S2. Significance of difference in means of topological relations (T-test), for pathogenic vs. benign mutations. Relations, contact order, and long-range order are not normalized by chain length.

|  | p-value | p-value, lower <br> distance cutoff |
| :--- | :--- | :--- |
| Number of contacts | $2 \times 10^{-298}$ | $2 \times 10^{-257}$ |
| Cross relations | $8 \times 10^{-195}$ | $1 \times 10^{-163}$ |
| Parallel relations | $2 \times 10^{-66}$ | $2 \times 10^{-54}$ |
| Inverse parallel relations | $3 \times 10^{-99}$ | $4 \times 10^{-88}$ |
| Series relations | $4 \times 10^{-58}$ | $6 \times 10^{-52}$ |
| Local contact order | $9 \times 10^{-43}$ | $5 \times 10^{-35}$ |
| Long range order | $5 \times 10^{-259}$ | $1 \times 10^{-226}$ |

Table S3. Random Forests performance for pathogenicity prediction, for a range of ntree values

| num <br> features | ntree | features |  |  |  |  | AUC |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 50 | FoldX | essential |  |  | 0.689 |  |
| 2 | 200 | X | essential |  |  |  | 0.692 |
| 2 | 500 | FoldX | essential |  |  |  | 0.693 |
| 2 | 1000 | X | essential |  |  | 0.694 |  |
| 3 | 50 | aa1 | ncontacts | essential |  |  | 0.738 |
| 3 | 200 | aa1 | ncontacts | essential |  |  | 0.741 |
| 3 | 500 | aa1 | X | essential |  | 0.741 |  |
| 3 | 1000 | aa1 | ncontacts | essential |  |  | 0.742 |
| 4 | 50 | aa1 | X | P-1 | essential |  | 0.769 |
| 4 | 200 | aa1 | X | position | essential |  | 0.769 |
| 4 | 500 | aa1 | X | position | essential |  | 0.770 |
| 4 | 1000 | aa1 | X | position | essential |  | 0.769 |
| 5 | 50 | aa1 | ncontacts | P-1 | position | essential | 0.787 |
| 5 | 200 | aa1 | ncontacts | P-1 | position | essential | 0.792 |
| 5 | 500 | aa1 | X | P-1 | position | essential | 0.794 |
| 5 | 1000 | aa1 | ncontacts | P-1 | position | essential | 0.793 |
| 14 | 50 | all |  |  |  | 0.798 |  |
| 14 | 200 | all |  |  |  | 0.807 |  |
| 14 | 500 | all |  |  |  | 0.807 |  |
| 14 | 1000 | all |  |  | 0.808 |  |  |

Table S4. Feature importance for Random Forest model

|  | 0 | 1 | Mean Decrease <br> in Accuracy | Mean Decrease <br> in Gini |
| :--- | ---: | ---: | ---: | ---: |
| essential | 94.18 | 86.57 | 105.11 | 708.30 |
| $\mathrm{P}^{-1}$ | 19.52 | 48.80 | 64.56 | 642.51 |
| aa1 | 92.93 | 0.62 | 61.82 | 941.78 |
| X | 22.36 | 35.96 | 61.66 | 699.51 |
| FoldX | 44.92 | 23.21 | 51.46 | 851.69 |
| CS | 18.01 | 24.96 | 46.78 | 427.11 |
| CO | 9.62 | 31.60 | 46.54 | 517.49 |
| EvoEF | 44.19 | -0.93 | 45.80 | 734.39 |
| aa2 | 78.49 | -18.73 | 44.82 | 976.39 |
| CP | 14.61 | 26.50 | 43.10 | 391.61 |
| $\mathrm{CP}^{-1}$ | 13.58 | 29.90 | 41.59 | 405.54 |

| P | 9.78 | 28.61 | 39.54 | 493.03 |
| :--- | ---: | ---: | ---: | ---: |
| ncontacts | 24.45 | 16.30 | 36.83 | 292.46 |
| LRO | 11.85 | 22.35 | 31.41 | 229.85 |
| position | 10.54 | 28.02 | 28.04 | 642.13 |

Data are sorted by mean decrease in accuracy.
Essential: whether or not the gene is essential.
$\mathrm{P}^{-1}$ : number of inverse parallel relations
aa1: amino acid mutated from
X : number of cross relations.
FoldX: FoldX $\Delta \Delta G$
CS: number of concerted parallel relations
CO: unnormalized local contact order
EvoEF: EvoEF $\Delta \Delta \mathrm{G}$
aa2: amino acid mutated from
$\mathrm{CP}^{-1}$ : number of concerted inverse parallel relations
CP : number of concerted parallel relations
P: number of parallel relations
ncontacts: number of contacts formed by the mutated residue and other residues
LRO: unnormalied local long range order
position: the position of the residue along the chain divided by chain length
