[Lisa Nakamura](#) is the Gwendolyn Calvert Baker Collegiate Professor of American Culture and Digital Studies and the founding Director of the Digital Studies Institute at the University of Michigan. She is the Lead P.I. for the DISCO Network.

In *Discriminating Data*, Chun reveals how polarization is a goal—not an error—within big data and machine learning. These methods, she argues, encode segregation, eugenics, and identity politics through their default assumptions and conditions.

CART and ASL will
be provided.

reveals how polarization is a goal—not an error—within big data and machine learning. These methods, she argues, encode segregation, eugenics, and identity politics through their default assumptions and conditions. Correlation, which grounds big data's predictive potential, stems from twentieth-century eugenic attempts to “breed” a better future. Recommender systems foster angry clusters of sameness through homophily. Users are “trained” to become authentically predictable via a politics and technology of recognition. Machine learning and data analytics thus seek to disrupt the future by making disruption impossible.
