RESEARCH FOR SUMMER OF 1944

Mat
F. Matheson

DIARY FOR SUMMER OF 1944

NOTE:

1. Dr. Stockard's 10 clams gotten at Old Log Lab. on May 2, 1944. In paraffin in Flint. Two are already sectioned and on slides.

2. Clem's 9(?) were taken on May 29, 1944. Shipped to Ann Arbor. In 10% formalin in Flint.

June 15. Douglas Lake.

Preserved 10 clams from above lake in 15% formalin, two days later transferred to 70% alcohol. Most females with eggs. Refer to PRESERVATIONS.

June 16-19.

The clams from Douglas Lake(at least) are not shedding glochidia. However, in aquaria, many egg sacs are aborted.

June 21. Wednesday. Ocqueoc Lake.

Gathered two tubs of clams. Caught many perch. Most already infected with glochidia. Placed in Cage 10. All died later in summer before any observations could be made.

June 22. Thursday. Preservation.

Preserve 10 from Ocqueoc; 5 from Douglas Lake, planted there last year; 5 from Doukss Lake, from several years ago.

June 23. Friday.

Place clams from Ocqueoc Lake in inoculating(infecting) aquaria(Nos. 1-7); also place those from Douglas Lake in inoculating aquaria(Nos. 8-10).

Find first glochidia in Ocqueoc group. Appear to be dead. Later same day: Observe first clam shedding glochidia. Are suspended on mucus thread, resembling rough spider web. Can tell if glochidia are alive by placing part of fish fin in petridish with glochidia.

June 25. Sunday.

Most infected fish fish have died of water mold. Catch more, infect them, and place in cages with sticks, etc. for shade and protection.

June 26. Monday.

Clean any dead fish from cages.
Glochidia being liberated constantly.

June 27, Tuesday.

Parasitize cages 1, 2, 3, and 4, in forenoon. Place sticks on bottom. 25 perch to each cage. Infect for about 4 or 5 minutes. Ocqueoc glochidia were used.

June 28. Wednesday.

Use different aquaria. Infect enough for cage 10(25 perch); also 25 in cage 9; also cage 9 total is 25. Take dead perch from cages.

June 29. Thursday.

Catch perch and rock bass in morning. Parasitize perch. Preserve clams. Refer to field notes.

June 30. Friday.

Parasitize 20 rock bass, put in cage 5.

July 1. Saturday.

Strip glochidia from clam and inoculate perch in clean aquaria.

Glochidia viable from 11:00 A.M. on through day. Inoculate 35 perch.

July 2. Sunday.

Glochidia still alive. Inoculate 19 perch.

July 2-9.

Many perch die of *Bacillus columnaris* (Bull. of the Bureau of Fisheries, Vol. XXVIII, 1921-22, Document No. 924, by H.S. Davis).

July 10.

To Occueoc Lake.

- (1) Take water sample.
- (2) Catch several perch, all infected.
- (3) Bring back tub of clams.
- (4) Find one gravid female.

At Douglass Lake

- (1) Catch 15(approx.) perch, 1 black bass. Infect artificially.

July 11.

Place infected perch, two to an aquarium.
Fill black bass, infected.

July 17.

Vacuum bottoms of cages 1, 2, 3, 4, and 5. All of June 23 but number 5(June 27).

July 18.

Look over cage samples:

Cage 1: At least one live young

Cage 2: Many live young and dead ones.

Cage 3: No young.

Cage 4: Few live young and dead.

Cage 5: No young.

Have pictures taken of young.

Measurements:

- .462 mm.
- .504 mm. Average .518 mm.
- .588 mm.

Study activities:

- 1. Very agile
- 2. Foot adhesive
- 3. Foot ciliated on end

July 19. Wednesday.

- 1. Vacuum bottom of cages 1, 2, 3, 4, and 5.
- 2. Perch of June 27 killed, no sign of glochidia.
- 3. 3 rock bass of July 2 killed, no glochidia.
- 4. Look over cage samples: Many found in cage 2; none in cage 1;

July 20. Thursday.

- 1. To Occueoc Lake with Invertebrate class all day.
- 2. Preserve *Lasmigona costata*.
- 3. Find more young clams in cage 2; 2 live from cage 3.

July 21. Friday.

- 1. Kill perch of June 23. No glochidia found.
- 2. Place finger bowl of clay and finger bowl of sand in aquarium. Place 5 young in each. Flood with lake water and leave.
- 3. Study young:
 - a. End covered with cilia; beat rhythmically when foot is extended; no beating when forward or stopped; cilia quit beating and form suction pad when foot extended and not moving.
 - b. Many diatoms, also one-celled animals at opening of shell; placed there by currents of water; many go into mantle cavity.
- 4. Examine bottom of aquaria of fish infected July 10. None found.

July 23. Sunday.

- 1. Kill all fish (14 left) infected June 23.
- 2. No signs of glochidial infection.
- 3. Kill all fish infected July 2, were 18 left.
- 4. Kill all rock bass (18) infected July 1. No sign of infection.
- 5. Take pictures, 39 exposures.

July 25. Tuesday.

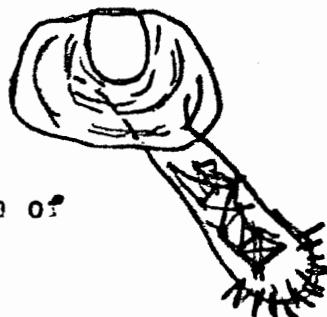

Measure baby clams:

.504 mm.	.588 mm.	.588 mm.	.462 mm.
.630 mm.	.588 mm.	.588 mm.	.630 mm.
.630 mm.			Average .576 mm.

July 26. Wednesday.

Make gill slides:

- a. Infected July 10-13, 3 days, 11 slides.
- b. Infected July 10-21, 11 days, 2 slides.

July 27. Thursday.

Examine dead infected perch of July 10. Glochidis in good shape. Seem to have increased in size, about ready to drop.

July 28. Friday.

1. Get many young clams from aquaria. Fish all infected

July 10.

Very active; very little development visible.

2. Examine infected perch. Many young still incysted.

July 29. Saturday.

1. Take pictures of new clams. Two films of about 30 per film.
2. Examine live infected perch. Many young clams still incysted. One dropped off but did not move.

July 30. Sunday.

1. Sink cages(buckets) into lake with 10 lettered clams in each. (Refer to data sheets for temperature, etc.) Clams gotten July 10 from Ceeueoc. Starved until July 28(18 days). Placed in lake (log lab.) until today (2 days). Weighed in tenths of grams by displacement of water. Scales readjusted for each clam. Placed in lake where water was 19 Meters deep.

July 31. Monday.

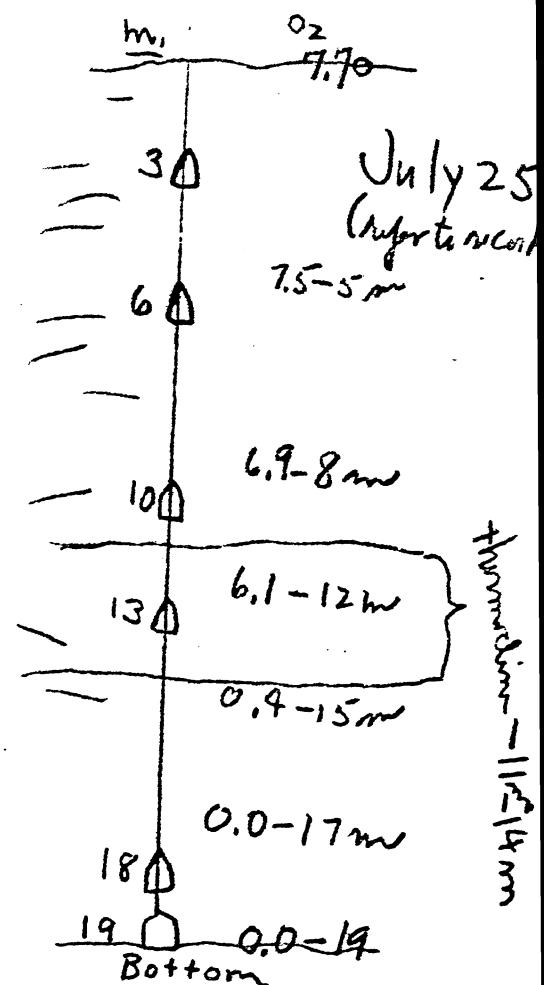

Glochidie gone from gills(other than one or two).

August 1. Tuesday.

Raise colony from North Fishtail Bay, Douglas Lake. Get many not gotten before(calm day). Weigh and measure and return.

August 2. Wednesday.

1. Raise clam colony in Lancaster Lake. Get 68. Bottom covered with fine ooze. Clams all deeply buried. Many lying on side as bottom is hard sand.
2. Examine baby clams.
 - a. Last group now have narrow rim of shell around glochidial shell; can't distinguish organogenesis to very great extent. Foot long and narrow.

b. Older ones have put on considerable growth. Gills becoming much more evident, seem to increase in number. Very active algae, etc. can enter the mantle cavity at this stage.

c. Measurements on older ones:

18 16 13 14 14 14 14 14

August 3. Thursday.

1. One clam placed on desk July 17 died. Had been at the temperature of the room with no water.
2. Raise, measure, and return colony at Vincent Lake after returning colony to Lancaster Lake.

August 4. Friday.

1. Kill all perch formerly infected. Fix gills in formaline for preservation. Many parasitic worms on gills. No evidence of glochidia.
2. Isolate 13 young(second group). Only from a couple aquaria.

August 5. Saturday.

Raise clams at Station 1 in Bar Lake. Weigh measure and return.

August 6. Sunday.

Raise clams at Station 2 in Bar Lake.
About 80-100 have been stolen. Rest weighed and measured.

August 7. Monday.

1. Take Physical-chemical data on stations at Bar Lake.
2. Preserve 10 *Iasmigona complanata* and 1 *Anodontes grandis*.
3. Physical -chemical records on separate sheets.

August 9. Wednesday.

Raise clam cases at floats:

3m. 1 dead, 9 alive(bucket)
6m. 1 dead, 9 alive(bucket)
10m. all 10 alive(bucket)
13m. all 10 alive(case)
18m. all 10 alive(case)
19m. 1 dead or dying, 9 alive(case)

Physio-chemical data also taken, refer to records.

August 10. Thursday.

1. Measure older group:

.924 mm.	.756 mm.	.882 mm.	.420 mm.
.840 mm.	.798 mm.		

2. Measure younger group:

.294 mm.	.294 mm.	.294 mm.	.294 mm.
.294 mm.	.316 mm.	.252 mm.	.236 mm.

3. Take photograph of both older and younger clams.

4. Younger have increased much in size.

August 11. Friday.

1. Ratte colony at Ocqueoc Lake. Take only 100. Most of entire colony in evidence.
2. Examine clam which has laid on desk at room temperature since July 17. Still alive. Shouldn't have killed it. Killed Friday night.

August 12. Saturday.

Survey trip to Hubbard Lake.

Check (refer to collection):

1. Swan Lake
- 1a. Swan River
2. Little Lake
3. Grand Lake
4. Long Lake
5. Alnena (bridge), Thunder Bay River
6. Hubbard Lake
(Collections at all lakes but Hubbard)

August 13. Sunday.

From Hubbard Lake to:

7. South Branch River at First Bridge from Hubbard Lake.
8. South Branch River 1 mile farther north from 7.
9. South Branch River 2 miles NE from no 8
10. Devil's Lake
11. Thunder Bay River above dam, Alnena City Park.
12. Thunder Bay River at Oxbow above Alnena

August 14. Monday.

From Hubbard Lake to:

13. Wolf Creek above dam.
14. Thunder Bay River 1 mile SSE of Orchard Hill.
15. Thunder Bay River 1 mile S of Long Rapids.
16. North Branch River 2 miles SE of Sunken Lake.
17. East shore of Lake Emma. PRESENT
18. Two points on East Shore of Lake May. Not present.
19. Lake Nettie, north shore. PRESENT
20. Road bridge between Lake Nettie and Upper Barnhart Lake. PRESENT
21. Upper Barnhart Lake, south shore. PRESENT
22. Ocqueoc River, 2 miles NE of Millersburg. Not present.

August 15. Tuesday.

Clean clams for collection.

August 16. Wednesday.

1. Clean clams for collection.
2. Preserve certain clams and number shells.
3. List 1 clam that repaired shell when cracked.
4. List 1 clam with pink instead of purple nacre.
5. Preserve A101-A110 for series.

August 17. Thursday.

Mount older bivalve clams which were killed at time of first discovery on slides.

August 20, Sunday.

1. Clean out aquaria of older clams. Place in jar for transportation. Gills, etc, clearly visible.
2. Also start cleaning out younger clams.

August 21. Monday.

1. Finish cleaning up young.
2. Considerable growth beyond glochidial shell.
3. Small creatures can swim inside of mantle cavity of clam.
4. Try floatation method. No good as young pinch onto algae and float out.
5. Young have valves apart very much of time.
6. Take pictures of both old and young.

August 22. Tuesday.

1. Pull in buoys, etc.
 2. Take in vertical cages
- | | |
|------|---------|
| 5m. | 9 alive |
| 6m. | 9 " |
| 10m. | 10 " |
| 13m. | 9 " |
| 18m. | 8 " |
| 19m. | 9 " |
3. Take cages to boat-house
 4. First suck bottom of cages for older clams who have had out-door conditions.
 5. Examine material of bottom.
 6. Find quite a few dead ones; one just dead. Few (very few) live ones. Why did they die? Cages were down about 8 feet. Observe and preserve flat worms which infested Cypris, etc.

end

PRESERVED MATERIALS 1944

1. June 20, 1944. Aborted Ovisacs.
2. June 21, 1944. Infected gills from perch in Ocqueoc Lake.
3. June 23, 1944. Glochidia(alive) still in mucous network.
4. June 27, 1944. Gills from perch infected today. Fish killed about 2 hours later. Many glochidia present.
5. June 28, 1944. Glochidia(alive) from infecting aquaria.
6. June 28, 1944. Infected gills from perch infected yesterday. Heavily infected.
7. July 2, 1944. Gills infected on June 27, infected; 10:30A.M.
8. July 4, 1944. Gills from infected perch of 4 days; very much infected.
9. July 5, 1944. Gills(highly infected) from perch infected July 2(two samples).
10. July 11, 1944. Gills from perch infected last night(about 8 hours).
11. July 11, 1944. Gills from black bass(striped gill-plates, kind?) infected 16 hours. Several encysted glochidia.
12. July 11, 1944. Gills from naturally infected perch from Ocqueoc Lake on July 10.
13. August 4, 1944. Gills from fish(perch) who had recently dropped their glochidia. Hope to see cysts(empty). Fixed in formalin and placed in alcohol August 10.
14. August 4, 1944. Same as above.
15. August 22, 1944. Bodies of older shells of clams found while going over bottom material of cases in lake. Very large. Also soft parts of one body. Also flat worms with Cypris, etc. inside.

PRESERVATIONS FOR SECTIONING

1944

June 15, 1944. A1-A10.

All from Douglas Lake. Placed in the lake last summer. Fixed in 15% formalin. Left in formalin for 36 hours(approx.). Then transferred to 70% alcohol.

A5 with eggs

A6 decidedly with eggs

A7 decidedly with eggs

A9 eggs just beginning

June 22, 1944.

A11-A20 from Ocqueoc Lake

A21-A25 from Douglas Lake(last year)

A26-A30 from Douglas Lake(several years)

A13 eggs well developed

A14 eggs well developed

A15 eggs very well developed, even in inner shell

A19 eggs just starting

A22 signs of eggs

A23 eggs well developed

A24 eggs well developed

A25 tubes with something in them, maybe eggs

June 29, 1944.

A31-A36 from Ocqueoc Lake

A37-A40 from Douglas Lake

July 1, 1944. A41-A47.

All were opened in looking for a gravid female.
All were either males or females who had shed.

July 6, 1944.

A48-A50 from Douglas Lake

A51-A70 from Ocqueoc Lake(in D.L. for 4 weeks)

A60 boiled

July 12, 1944.

A71-A80 directly from Ocqueoc Lake

July 15, 1944.

A11-A16(*Alasmidonta calceolus*)

Boiled

A12 and A13, no shell

also---

R1-R10(*Elliptio complanatus*)

Boiled

Small, for total mounts

also---

A81-A90 from Ocqueoc Lake on July 10
Boiled

July 20, 1944. LC1-LC20 (*Lasmigona costata*)
Boiled
No shells

July 24, 1944. LS1-LS10 (*Lambskillia siliquoidea*)
Boiled
Small for total mount
From Douglas Lake
also---
LN1-LN12 (*Ligumia nasuta*)
Boiled
LN11 not boiled
From Douglas Lake
also---
AC1-AG12 (*Anadonta grandis*)
AG3 and AG4 not boiled
From Douglas Lake

July 28, 1944. A91-A100
Boiled
All starved for 18 days
A93 and A94 not boiled

August 6, 1944. LC1-LC10 (*Lasmigona complanata*)
From Bar Lake
also---
AG13 (*Anadonta grandis*)
From Far Lake
All of above boiled

August 15-16, 1944. All boiled
AF1-AF3 from Swan Lake
AF4-AF8 from Grand Lake
AF9 from North Branch of Thunder Bay River (SE
of Sunken Lake)
AF10-AF20 from Black Lake
Anadontoides ferrassacianus
AG1-AG16 from Little Lake
AG17 from Mackinaw
Anadonta grandis (marginata)
SR1 from Grand Lake
SR2 (may be called 1) from Alpena City Park
Strophitus rugosus
LC1-LC13 from Ocqueoc River at road below
Lake Hettie
LC2-14-LC15 Maple River East of Bryant's Bog
Lasmigona compressa

ED1-ED17 from Thunder Bay River at Long Rapids
Elliptio diabolus
LV1-LV2 from Black Lake Outlet
Lampsilis ventricosa
XO1-XO3 from Ripon City Park
unknown
also
A101-A110 from Lake Emma
A4 to A10 small ones

RECLAIMED FROM BAR LAKE AUGUST 5, 1944
