JOHN HARVEY KELLOGG (1852-1943)

INDEX RERUM, CA. 1888-1896

A NEW

INDEX RERUM.

—FOR—

Students and Professional Men.

ARRANGED TO MINIMIZE THE LABOR OF INDEXING AND TO CLASSIFY ALL INDEXED SUBJECTS.

ENLARGED EDITION.

COPYRIGHT 1880, BY JOEL A. MINER.
ENLARGED EDITION COPYRIGHT 1881, BY JOEL A. MINER.

PUBLISHED BY
JOEL A. MINER, ANN ARBOR, MICHIGAN.
ORDER BY MAIL.

EXPLANATIONS FOR THE ENLARGED EDITION OF THE INDEX RERUM.

(NOTE.—Those, who think the changes from the previous form make the book complex, will ignore them, and use the book as first designed. The last paragraph below, belongs only to the *full size* of this edition.)

(1.) An objection to arranging subjects under each inital letter by the first following vowel is, that the allotted space does not always correspond to the requirements of space. In the former edition, this objection was remedied in good degree, by the two extra pages in each set, and by carrying full pages in any set to unfilled pages in other sets. In this edition in addition to these plans, provision is made for each user of the book, to change the present printed vowels upon the pages, as his probable wants may suggest. For example, if under B, it would be a better division of the pages to have two pages for the Vowel, *a*, and two for, *o*, it would be the work of only a moment to cross out the printed vowels and figures, and in the parentheses below them insert the new vowels as required.

(2.) The scope and usefulness of the table for subjects on each page is greatly enlarged, by making it also a table for Subdivisions of Subjects. An illustration for physicians will answer for the other classes who use the book. If this table on the *G o* page were filled out, 1, Gout; 2, Arsenic in Gout; 3, Iodide of Potassium in; 4, Colchicum in; then, 1, 2, 3, 4, etc., in the Subject Number column, would stand for these items, and when the book was referred to, a glance of the eye down this column would suggest minutely, the contents of the page. When a physician wishes to make mere references to where valuable matter could be reread when needed, a figure in this column and the figures expressing the Journal's name, (from the Table of References) and year, and page, (*e. g.*, 1, '80, p. 100) would give a useful descriptive entry. The labor would be so slight, as to make it inexcusable to not sort out in this way, the important from the unimportant in one's reading. Every other class using the book can make corresponding subdivisions of subjects. If more than nine numbers are required prefix a 2, to the numbers on the right hand page (*e. g.*, 21, 22, etc.).

(3.) The letters A, B, C, D, are a device for paragraphing the references, and other matter upon the page, according to its character, and in connection with the table of subdivisions as just explained, they give an entirely distinct use of the book from the one first intended. There are large classes to whom a book of this kind would be useful, not to catch and hold all kinds of miscellaneous knowledge, but to retain and classify a large number of mere references, for the limited range of subjects, in which through their profession or pursuits they have interest. They need a book which by the mere labor of setting the figures involved in a reference, in a significant place, will give a classified reference, to some class of subjects, or to the divisions of a single subject. All related references then will be in one place, and when the subsequent need comes, the subject matter of these references can be reread, as fully as desired. All the former printed headings, except, "Subject Number Column," are to be ignored. The divisions A, B, C, D, are to be filled out after the illustration below, as the wants of individual users require. They then mark the *beginning point* upon the page, for all references or paragraphs, belonging to these respective divisions. I give a medical illustration. If filled out, as follows:

A, Diseases, and general and unclassified remarks; B, Symptoms; C, Complications; D, Treatment; now if the reference was made on account of the description of symptoms, it would be begun underneath the letter B; if on account of treatment, underneath D. When an entry is begun in a line, the remainder of that line belongs to that entry, or that class of entries, (and if preferred, the remainder of the space until the next red line is met). To keep the paragraphs distinct, make the lines which continue preceding lines, begin close to the cross line on the left.

College students can make use of the book in this form, to cast the valuable portion of their college notes into a permanent form. In this case the notes would be written out in accordance with this plan, instead of having references to them. The following classifications will frequently be valuable, and they will suggest any others required:

A	B	C	D
General Statements and Truths.	Historical Development.	Contradictory, Past Beliefs, or Theories.	Applications, Lines of Progress, Wants.

(4.) In the *full size* of this edition, there are two parts precisely alike, they can be used in three ways: (1) Professional men can use one part for their professional reading, and the other for all other uses; (2) Other users of the book can put, one class of subjects, as, history, and literature in one part, and another class, as, philosophy, and science in the other part; (3) If such subdivisions are not made, a consonantal arrangement of subjects can be combined with the vowel arrangement. If the consonant first following the initial letter is in the first half of the alphabet (*b* to *m*) these subjects can be put in the first part; if in the last half (*n* to *s*), in the second part. For example, electricity, eccentricity, Homer and Milton, would belong in the first part; and mesmerism, motives, pyramids and Kant, belong in the second part.

STUDENTS, Scientists and members of the Professions, have long recognised the necessity of a convenient book, for indexing all important subjects of which subsequent use may be made. Without this aid, much that is read soon passes beyond the power of the memory to recall. By indexing all that is valuable in one's reading, and recording the judgment of the mind thereupon, no important fact, or thought, can escape from the storehouse of mental riches; the reading of a previous decade is made nearly as fruitful in giving the mind materials to work with, as is that of the current year. But it may be said that formerly publishers did not index their books, and that, then, no one could dispute the usefulness of a personal index; but that latterly, all valuable books come to the readers thoroughly indexed, and therefore the reader is saved the labor of indexing, and there is left no sufficient reason for an Index Rerum. This statement overlooks the fact, that many valuable things are still not indexed; but beyond this, it involves a very inadequate perception of the benefits which may come from keeping an Index Rerum. A properly kept Index Rerum, besides tabulating valuable references, makes for the individual out of the mass of his reading, a selection of the things germane to his own work and development. It selects the important from the unimportant, and, frequently, in recording personal judgments upon their worth it gives a permanence to valuable thoughts. It arranges in one place all that is read or thought upon that subject, so that when consulted, it gives the mind a comprehensive view of all its previous reading, and greatly aids it in making its knowledge accurate and full. It provides for the Student an invaluable means for reviewing his knowledge and increasing his hold upon it. If it be his habit, whenever consulting the Index, to reread any reference of which he has not a definite and clear remembrance, he will acquire an available wealth of knowledge, which can be gained in no other way.

While the indexing is done to provide against the inevitable lapses of the memory, no other course could be taken to make the grasp of the memory so strong upon the topics indexed. The definite concentration of attention, involved in the act of indexing, accords with the first law for strengthening the memory of the subjects, and the tabular arrangement of all that relates to the same subject, where it will be frequently consulted and consulted in its entirety, accords with the fruitful law of association.

The following points are peculiar to this book, and are its ground for asking public favor.

1. It will frequently happen that many references will be made to the same source (some important book or professional journal). This book can be entered in the Table of References following this preface, and in the body of the index be referred to by the number opposite it in the table, and thus save the labor of the successive writings of the title. In the Index it will be well always to prefix to the reference number, the chief initial letters in the title, to aid the mind when the Index is consulted, to recall the significance of the reference number without consulting the table. The table is separated into divisions of sizes. Put in the same division related references, as science in one group; literature in another; and professional subjects in a third, and so on. 2. The more important subjects may have many references on the same page; enter such subjects in the table at the top of the page, and afterwards refer to them by the numbers opposite them. 3. Each page is divided into parts by red lines. One or more of these parts can be given to each subject of numerous references, and thus secure the very desirable advantage of bringing together in one part of the page the related references. This will be especially serviceable with all scientific and professional subjects. 4. The arrangement of subjects under each letter of the alphabet, is made by the vowel first following the initial letter. Those having *a* in the first syllable are put on the first page; those having *e* on the second page, and so on. Two extra pages follow the necessary six of each initial letter, upon which can be continued the pages of that letter first filled. By this means the unavoidable differences of demand, for the different pages is provided for. The book, when filled, will be filled throughout. To those who have never used a book of this kind a few words should be said. Index everything by its most significant title. It will be desirable sometimes to index very important matters under several titles. Make the record of personal opinions as serviceable as possible. Devise your own scheme of abbreviation for making your index as full, and as suggestive, and as labor saving, as possible. Ordinarily one line will be used for one reference, but sometimes two lines. One example is as good as many in illustrating the use of the book.

Coinage, Debasement of, coincident with general debasement, Draper's Intellectual Development of Europe, page 184.

In this book it may happen that "Coinage" and "Draper's Europe" may be represented by numbers, and thus save half the labor of the entry.

TABLE OF REFERENCES.

NOTE.—Arrange in the same group references to similar sources, as professional, or general journals, in one group; history, science, philosophy, literature, etc., each in one or more groups, as special circumstances may require. When the table is confined to professional references, a similar grouping into related branches of professional subjects can be made. This table of references is only to be used with books and journals likely to be referred to frequently.

Illustrations and Remarks upon the Use of the Index Rerum.

GENERAL LITERARY USE.—The arrangement is as follows:

SUBJECT No.	SUBJECT.	REMARKS.	REFERENCE.	REF. No.	VOL.	PAGE.
	Architecture.	Source of its Types.	"Spencer's Illustrations of Progress."			434

NOTE.—This subject would be entered in the Index Rerum upon page A i—A being the the initial letter, and i the first following vowel. If "Spencer's Illustrations of Progress" is a book likely to be referred to frequently, it would be entered in the Table of References in front, for example, opposite 12, and thenceforward throughout the Index Rerum 12 in the "Reference No." column would always designate this book as clearly, as though the full title were written out. If "Architecture" is a subject upon which numerous references will probably be gathered, it can be entered in the "Table of Subjects" at the top of the page, and be designated thenceforward on that page by the number opposite it. (In this case, e. g. 2). This entry would then be as follows:

SUBJECT No.	SUBJECT.	REMARKS.	REFERENCE.	REF. No.	VOL.	PAGE.
2		Sources of its Types.		12		434

It is manifest that these devices save half the labor in indexing and involve no obscurity.

ARABS—Their Civilization in Spain; "Draper's Intellectual Development of Europe." page 347. (This would be entered on page A a.)

CHINESE—Schlegel's Philosophical Account of; "Hedge's Prose Writers of Germany," page 214, (page C i.)

DESPOTISM—Secures the services of the best talent; "Spencer's Essays," page 192, (page D e.)

IMMORTALITY—Fine Thoughts of Horace Mann; "Scrap Book," page 105, (page I o.)

Use by Physicians.—To no class will the Index Rerum be more serviceable. A large portion of the advancement in medical knowledge first appears in medical journals, where it is quickly lost sight of, unless it is preserved by some selective reference. The busy physician has less time to ransack his library for some important, but only half remembered fact, than the members of other professions. His science requires so many exceptions to fixed procedures, that he will fail of the largest success, unless he brings to his aid the recorded experiences of the entire profession. Let the physician, under the heads of the various *diseases* and *remedies*, keep a record of all that is noteworthy in his reading, or experience, and he will have an available wealth of knowledge, invaluable to him, and attainable in no other way. The use of the book is precisely as given above, only many times valuable prescriptions and items will be copied out in full.

Use by Lawyers.—Aside from its general literary use, and its use as a political hand-book, the Index Rerum is as serviceable as any form, for a lawyer's professional Common-Place Book. In this latter use the "Table of Subjects" will be quite serviceable. Professional subjects, involving many references, can be extended from page to page in the lower half of each page, saving the upper half of each page for the special subjects, by the vowel arrangement, belonging to that page; or, the Table of Subjects on each page can be used as an ordinary index, when more than that page and the extra pages in that set may be needed for the subjects belonging to that letter, designating the pages under the less used letters of the alphabet, where the subjects are continued. I y, Q o, V a, designate pages in this book as clearly as paging does in ordinary books.

To both lawyers and physicians, even though the subjects indexed were all accessible in other ways, the Index would still be very valuable by bringing together in one place all related references, and thus guarding against what sometimes might prove fatal omissions in knowledge. But it does much more than this; it saves references that otherwise would never be made, and it records personal judgments that otherwise would be forgotten, its discriminations are closer than any general form of indexing for the professions can provide.

Domestic Use.—This field, if not as wide, is as important as any of the others. There are many things of practical importance constantly appearing in the periodical press, which are quickly lost sight of, and which, if preserved, in some exigency would be invaluable. Matters pertaining to hygiene, to sickness, to accidents, illustrate this. The book would in fact, grow into a Domestic Cyclopedia, to be referred to, whenever guidance might be needed outside of the usual domestic routine. The saving of labor, which the Tables of References provide, especially commends it for domestic use.

I give a few examples which suggest, rather than illustrate the range of usefulness to which the book might attain. (The references given are not accurate.)

BOILS—Can be aborted by carbolic acid and glycerine; Scrap Book, page 18. (In the Index on page B o.)

CARPET MOTHS—Two preventives; Scientific American, 1879, No. 40, (page C a)

CEMENTS—For all kinds of domestic purposes, very valuable; Boston Journal of Chemistry, July, 1880, page 23, page C e.)

DIPHTHERIA—(In I. R. upon page D i). Use of common salt as a gargle recommended as a preventive; N. Y. Weekly Tribune, October 20, 1879.

INCH RUST—Best removed from clothing by Stanhous Chloride, Scrap Book, page 50, (I o);

LINEN—How to distinguish from cotton by chemical means; Christian Union, Dec. 14, 1879, (L i.)

SICKROOM—Cookery for, very valuable and full directions; American Agriculturist, June, 1880, (page S i.)

If the younger members of the family be encouraged to index their reading, and the Index be used by parents, as a question book upon the reading, it will develop a love for intellectual work, and establish mental habits, and secure knowledge to the plastic mind of the child, far surpassing the results of any other single educational method.

SPECIAL NOTE.—*The book, aside from the uses indicated above, and similar uses in other professions, can be used in many special ways. The indexed form, and the special reference tables, can be made serviceable wherever classification and repetition of writing are involved. The indexing of correspondence illustrates its miscellaneous use.*
