**Table S2.** Estimated Cumulative Percent and 95% Confidence Interval of 1320 Women with at least 1, 2, or 3 Occurrences of Potentially Abnormal Uterine Bleeding<sup>3-6</sup>, The Study of Women's Health Across the Nation (SWAN) Menstrual Calendar Substudy

<sup>a</sup> Cumulative percent and 95% confidence interval calculated by Kaplan-Meier Product Limit to adjust for right-censoring

<sup>b</sup> Prolonged menses defined by FIGO<sup>3,6</sup>

<sup>c</sup>1320 women were observed during the study

<sup>d</sup> 963 had the start of the early transition stage observed

<sup>e</sup>815 women had the start of the late transition observed.

f Prolonged menses defined by Belsey 1997<sup>7</sup>

g Cutoff defined by approximate upper 5% of menstrual cycles in SWAN menstrual calendar substudy
