

Supporting Figure S4. Differential effects of lovastatin and fenpropimorph treatments on DRP1A total protein levels.

Western-blot analysis of proteins in total protein extracts from five-day-old *Arabidopsis* seedlings. Equal amounts of membrane protein (30 μ g) were loaded. Antibodies were directed against DRP1A and BiP as a loading control. Coomassie-stained gels were also used as a loading control. The results from three independent experiments are displayed.
