Table 1: Role-symmetric equilibria for prediction market games with an LMSR market maker and 42 single-entry traders (21 informed and 21 less informed), calculated from the (3, 3)-player DPR approximation. Each row of the table describes one equilibrium found, with the market maker spread and liquidity parameter b included, as well as the mean out-of-sample RMSD and the mixture probabilities for each role for the strategy parameter $\theta \in \{0, 0.25, 0.5, 0.75, 1\}$.
