Notes:

Using the Repository Description Tool

Name and URL: official repository name and online location

Hosted by: The organization (institution, consortium, non-profit, etc.) that administers the resource, sets policy, etc.

Subject/discipline focus: Be as specific as necessary and possible. It is unnecessary to list all of the possible data types for a broad-focus interdisciplinary repository, but a repository that specializes in biodiversity data should probably be labelled “biodiversity” rather than simply “ecology” or “biology.”

Access to data: Access is “Open” if data is freely available to anyone on the Web, otherwise access is “Restricted” should be described more completely (e.g., subscription access, must apply for access to sensitive data, data available only to members of a particular institution/organization, automatic embargo of new data for X years, etc.).

Deposit of data: Deposit is “Open” if data can be freely deposited by anyone on the Web, otherwise deposit is “Restricted” and should be described more completely (e.g., deposit fee, deposit only for members of a particular institution/organization, etc.).

Deposit fee: Fee (if any) for depositing data into the repository; specify whether this is per dataset or a membership fee.

Persistent identifiers: Describe any identifiers that are assigned to datasets (e.g., DOI, ARK, handle, etc.)
