State Legislators

A time of opportunity, responsibility, and challenge

UM and State must work together in a partnership to secure the future prosperity and quality of life desired by Michigan citizens Requirements:

- UM must continue its strong commitment to decisive internal actions designed to focus resources on areas of particularly high quality and critical importance
- State must cotinue its commitment to substantial further investment in the University

A time of dramatic economic change...

- Traditional industry economy is shifting to a new, knowledge-based economy just as our industrial focus evolved from an agrarian society at the turn of the century.
- Intellectual capital -- brainpower -- is increasingly regarded as the key element needed to compete effectively in a highly technological and rapidly changing global economy.
- As we look to the knowledge-intensive future of Michigan, we recognize as have so many other states that it will be our great research universities that will hold the key to our collective prosperity.
- For this reason, leaders of state govenrment, business, labor, and industry have called for a renewed investment in these institutions so essential to sustaining the strength of our economic base.

State government has responded...

By re-establishing Michigan's universities as a high priority for public support. Strong steps have been taken to halt the serious erosion of public support that occurred during the 1970s.

Exciting new initiatives such as the Research Excellence Fund are beginning to build the R&D infrastructure so essential to a knowledge-based economy Already clear evidence of payoff...

- University's federal research increased by 25% -industrially sponsored research has increased by 50%
- 2. Research Excellence Fund has created nationally recognized centers in:

Complex manufacturing technology

Machine intelligence

Advanced electronics

Information technology

These programs already have attracted three major national research centers funded at \$27 M.

 UM has been selected as lead institution in EXPRES project to develop a nationwide comtuter-communications network linking together American research universities, federal government, and industry.

We are approac ing State&government for assistance in getting Michigan on-board at an early stage with a similar network linking state universities and colleges with all communities

- 4. State investment in UM Medical Center has paid off, not only with the best medical care in the nation, but exciting new research programs in
