College of Engineering

Announcement
1936-1937
and
1937-1938
Entered as second-class matter at the Post Office at Ann Arbor, Michigan. Issued by the University of Michigan semiweekly from March to August, inclusive, and weekly from September to February, inclusive.
CONTENTS

CALENDAR .................................................. 4–5

PART I

OFFICERS AND FACULTY ..................................... 7

PART II

GENERAL INFORMATION: Admission; Fees and Expenses; Michigan Union and Michigan League; University Health Service; Facilities and Requirements for Physical Education; Assembly, Mentor, and Placement System; Rules Governing Election of Studies and Grades .................. 19

PART III

GENERAL STATEMENT: Departments; Buildings and Other Equipment; Societies; Fellowships, Scholarships, Prizes, and Student Aids; Degrees; Requirements for Graduation; Non-technical Electives ........................ 45

PART IV

NONPROFESSIONAL DEPARTMENTS: The First Year; Departments of Instruction; Engineering Research ......................... 58

PART V

PROFESSIONAL DEPARTMENTS ......................... 92

APPENDIXES

SUMMARY OF STUDENTS ................................. 228
INDEX OF SUBJECTS ................................. 229
The days that the University is in session are printed in light-face type; Sundays, holidays, and vacations in bold face.
UNIVERSITY CALENDAR

Academic Year, 1936–37

1936
September 14–18, Monday–Friday........Examinations for admission
September 22–26, Tuesday–Saturday..........Orientation Period
September 25–26, Friday and Saturday ...........
------------------------Classification of all Engineering students
September 28, Monday, morning........FIRST SEMESTER BEGINS
November 26, Thursday................Thanksgiving Day, holiday
December 18, Friday, evening........Holiday vacation begins

1937
January 4, Monday, morning.................Classes resume
January 30, Saturday ....................Final examinations begin
February 10–12, Wednesday–Friday........Examinations for admission
February 12–13, Friday and Saturday ......
------------------------Classification of all Engineering students
February 12, Friday, evening..........FIRST SEMESTER CLOSES*
February 15, Monday, morning..........SECOND SEMESTER BEGINS*
February 22, Monday .............Washington's Birthday, holiday
April 9, Friday, evening .................Spring vacation begins
April 19, Monday, morning ..............Classes resume
June 5, Saturday .......................Final examinations begin
May 31, Monday ......................For Memorial Day, holiday
June 19, Saturday ......................COMMENCEMENT

Summer Session, 1937
June 21, Monday—September 1, Wednesday...In the Law School
June 28, Monday—August 6 and 20, Friday...In the Medical School
June 28, Monday—August 20, Friday.......In all other divisions

Academic Year, 1937–38

1937
September 20–24, Monday–Friday........Examinations for admission
September 21–25, Tuesday–Saturday..........Orientation Period
September 24 and 25, Friday and Saturday ....
------------------------Classification of all Engineering students
September 27, Monday, morning........FIRST SEMESTER BEGINS
November 25, Thursday................Thanksgiving Day, holiday
December 17, Friday, evening ..........Holiday vacation begins

1938
January 3, Monday, morning................Classes resume
January 29, Saturday ....................Final examinations begin
February 9–11, Wednesday–Friday........Examinations for admission
February 11 and 12, Friday and Saturday ..... 
------------------------Classification of all Engineering students
February 11, Friday, evening..........FIRST SEMESTER CLOSES*
February 14, Monday, morning..........SECOND SEMESTER BEGINS*
February 22, Tuesday .............Washington's Birthday, holiday
April 8, Friday, evening .................Spring vacation begins
April 18, Monday, morning ..............Classes resume
June 4, Saturday .......................Final examinations begin
May 30, Monday ......................Memorial Day, holiday
June 18, Saturday ......................COMMENCEMENT

*Except in the Law School, for which the date is one week earlier.
Part I

OFFICERS AND FACULTY

BOARD OF REGENTS

Elected Members

Hon. JAMES O. MURFIN, Detroit ............... Dec. 31, 1937
Hon. RICHARD R. SMITH, Grand Rapids .......... Dec. 31, 1937
Hon. JUNIUS E. BEAL, Ann Arbor ............... Dec. 31, 1939
Hon. RALPH STONE, Detroit ................... Dec. 31, 1939
Hon. FRANKLIN M. COOK, Hillsdale ............. Dec. 31, 1941
Hon. CHARLES F. HEMANS, Detroit ............ Dec. 31, 1941
Hon. ESTHER M. CRAM, Flint .................. Dec. 31, 1943
Hon. DAVID H. CROWLEY, Detroit ............. Dec. 31, 1943

Members ex Officio (Without Vote)

Hon. EUGENE B. ELLIOTT, Lansing, State Superintendent of Public Instruction
ALEXANDER GRANT RUTHVEN, President of the University

Officers

ALEXANDER GRANT RUTHVEN, President
SHIRLEY W. SMITH, Vice-President and Secretary

ADMINISTRATIVE OFFICERS

ALEXANDER GRANT RUTHVEN, Ph.D., LL.D., Sc.D., President
815 South University Avenue

HERBERT CHARLES SADLER, D.Sc., LL.D., Dean, College of Engineering
1510 Hill Street

ALFRED HENRY LOVELL, M.S.E., Assistant Dean and Secretary,
College of Engineering
3000 Geddes Road

CAMILLA BLANCHE GREEN, Assistant Secretary, College of Engineering
910 Dewey Avenue

IRA MELVILLE SMITH, LL.B., Registrar
4 Geddes Heights

ALBERT EASTON WHITE, Sc.D., Director, Department of Engineering Research
2110 Dorset Road

PROFESSORS EMERITUS

MORTIMER ELWYN COOLEY, M.E., Eng.D., Sc.D., LL.D., Dean Emeritus
1405 Hill Street

WILLIAM HENRY BUTTS, Ph.D., Professor Emeritus of Mathematics
407 East Kingsley Street
MEMBERS OF THE FACULTY AND OTHER OFFICERS*

Professors and Associate Professors

HENRY CLAY ANDERSON, B.M.E., Professor of Mechanical Engineering, Head of the Department of Mechanical Engineering, and Director of Student-Alumni Relations
1610 Washtenaw Avenue

STEPHEN STANLEY ATTWOOD, M.S., Associate Professor of Electrical Engineering
1411 Wells Street

WILLIAM LEEAYES, Ph.D., Associate Professor of Mathematics
1204 Henry Street

WERNER EMMANUEL BACHMANN, Ph.D., Associate Professor of Organic Chemistry
1208 Olivia Avenue

WALTER LUCIUS BADGER, M.S., Professor of Chemical Engineering
904 Church Street

BENJAMIN FRANKLIN BAILEY, Ph.D., Professor of Electrical Engineering and Head of the Department of Electrical Engineering
1019 Baldwin Avenue

EDWIN MYRON BAKER, B.S., Professor of Chemical Engineering
1603 Morton Avenue

ERNEST FRANKLIN BARKER, Ph.D., Professor of Physics
18 Ridgeway Street

FLOYD EARL BARTELL, Ph.D., Professor of General and Physical Chemistry
1919 Scottwood Avenue

JOHN REGINALD BATES, Ph.D., Associate Professor of General and Physical Chemistry
715 Forest Avenue

SAMUEL LAWRENCE BIGELOW, Ph.D., Professor of General and Physical Chemistry
1520 Hill Street

WILLIAM WARNER BISHOP, A.M., Litt.D., LL.D., Librarian
733 Oakland Avenue

ORLAN WILLIAM BOSTON, M.S.E., M.E., Professor of Metal Processing and Director of the Department of Metal Processing
2021 Vinewood Boulevard

HARRY BOUCHARD, B.C.E., Associate Professor of Geodesy and Surveying
1111 Woodlawn Avenue

JOHN WILLIAM BRADSHAW, Ph.D., Professor of Mathematics
1304 Cambridge Road

EDWARD MILTON BRAGG, S.B., Professor of Naval Architecture and Marine Engineering and Head of the Department of Naval Architecture and Marine Engineering
1056 Ferdon Road

JOHN CROWE BRIER, M.S., Professor of Chemical Engineering
2301 Vinewood Boulevard

GEORGE GRANGER BROWN, Ph.D., Ch.E., Professor of Chemical Engineering
1910 Hill Street

CARL EDWIN BURKLUND, Ph.D., Associate Professor of English
1561 Marlboro Drive

* In this list are included the names of certain instructors in other Colleges offering courses of interest to students in engineering.
MEMBERS OF THE FACULTY

JOSEPH ALDRICH BURSLEY, B.S.(M.E.), Professor of Mechanical Engineering and Dean of Students 2107 Hill Street

HARRY LINN CAMPBELL, M.S., Associate Professor of Metal Processing 909 Church Street

JOSEPH HENDERSON CANNON, B.S.(E.E.), Professor of Electrical Engineering 1803 Hill Street

CLIFTON O'NEAL CAREY, C.E., Associate Professor of Geodesy and Surveying Geddes Road

ERMINE COWLES CASE, Ph.D., Professor of Historical Geology and Paleontology, Chairman of the Department of Geology, and Director of the Museum of Paleontology 619 East University Avenue

JAMES HARLAN CISSEL, B.S.(C.E.), Professor of Structural Engineering

WALTER FRANCIS COLBY, Ph.D., Professor of Physics 801 Berkshire Road

JAMES MURLE CORK, Ph.D., Associate Professor of Physics 2034 Day Street

HEBER DOUST CURTIS, Ph.D., Sc.D., Professor of Astronomy, Chairman of the Department of Astronomy, and Director of the Observatory 1308 East Ann Street

CARL E. W. LEONARD DAHLSTRÖM, Ph.D., Associate Professor of English 1304 Horman Court

ARTHUR JAMES DECKER, B.S.(C.E.), Professor of Sanitary Engineering 1037 Packard Street

DAVID MATHIAS DENNISON, Ph.D., Professor of Physics 1011 Lincoln Avenue

RUSSELL ALGER DODGE, M.S.E., Associate Professor of Engineering Mechanics 1233 Baldwin Avenue

BRUCE MCNAUGHTON DONALDSON, A.M., Associate Professor of Fine Arts and Chairman of the Department of Fine Arts 1520 Cambridge Road

ORA STANLEY DUFFENDACK, Ph.D., Associate Professor of Physics 2107 Devonshire Road

WALTER JOHNSON EMMONS, B.S., A.M., Associate Professor of Highway Engineering 929 Olivia Avenue

JOHN EDWARD ENSWILER, M.E., Professor of Mechanical Engineering 1303 Granger Avenue

EDWARD LEERDRUP ERIKSEN, B.C.E., Professor of Engineering Mechanics and Head of the Department of Engineering Mechanics 1221 Baldwin Avenue

PETER FIELD, Ph.D., Professor of Mathematics 904 Olivia Avenue

FRANK RICHARD FINCH, Ph.B., Associate Professor of Mechanism and Engineering Drawing 1619 South University Avenue

CHARLES WINFRED GOOD, B.S.E.(M.E.), Associate Professor of Mechanical Engineering and Assistant to the Director of the Department of Engineering Research 622 South Seventh Street
COLLEGE OF ENGINEERING

CHARLES BURTON GORDY, Ph.D., Associate Professor of Mechanical Engineering 1929 Lorraine Place
SAMUEL ABRAHAM GOUDSMIT, Ph.D., Professor of Physics 1111 Baldwin Avenue
HERBERT JAY GOULDING, B.S.(M.E.), Associate Professor of Mechanism and Engineering Drawing 703 Berkshire Road
LEWIS MERRITT GRAM, B.S.(C.E.), Professor of Civil Engineering, Head of the Department of Civil Engineering, and Director of Plant Extension 1904 Austin Avenue
CLARE ELMER GRIFFIN, Ph.D., Professor of Marketing, Dean of the School of Business Administration, and Director of the Bureau of Business Research 21 Ridgeway Street
RANSOM SMITH HAWLEY, M.E., Professor of Mechanical Engineering 2717 Kenilworth Drive
WILLIAM D. HENDERSON, Ph.D., Director of the University Extension Division 705 South State Street
HENRY HAROLD HIGBIE, E.E., Professor of Electrical Engineering 402 Awixa Road
THEOPHIL HENRY HILDEBRANDT, Ph.D., Professor of Mathematics and Chairman of the Department of Mathematics 1930 Cambridge Road
WILLIAM CHRISTIAN HOAD, B.S.(C.E.), Professor of Sanitary and Municipal Engineering 2108 Melrose Avenue
LOUIS ALLEN HOPKINS, Ph.D., Associate Professor of Mathematics and Director of the Summer Session 1517 South University Avenue
WALTER FRED HUNT, Ph.D., Professor of Petrology, Chairman of the Department of Mineralogy, and Director of the Mineralogical Laboratory 1030 Baldwin Avenue
RUSSELL CLAUDIUS HUSSEY, Ph.D., Associate Professor of Geology 595 Riverview Drive
CLARENCE THOMAS JOHNSTON, C.E., Professor of Geodesy and Surveying, Head of the Department of Geodesy and Surveying, and Director of the Davis Engineering Camp 1335 Hill Street
HUGH EDWARD KEELER, M.E., Professor of Mechanical Engineering 728 Onondaga Street
HERBERT ALDEN KENYON, A.M., Associate Professor of Spanish 2037 Norway Road
HORACE WILLIAMS KING, B.S.(C.E.), Professor of Hydraulic Engineering Hilldene Manor
EDWARD HENRY KRAUS, Ph.D., Sc.D., LL.D., Professor of Crystallography and Mineralogy and Dean of the College of Literature, Science, and the Arts Arlington Boulevard
OTTO LAPORTE, Ph.D., Associate Professor of Physics 317 Maple Ridge Avenue
WALTER EDWIN LAY, B.M.E., Professor of Mechanical Engineering 101 Orchard Hill Drive
MEMBERS OF THE FACULTY

GEORGE ALLAN LINDSAY, Ph.D., Associate Professor of Physics
2015 Day Street

CLYDE ELTON LOVE, Ph.D., Professor of Mathematics
1915 Scottwood Avenue

ALFRED HENRY LOVELL, M.S.E., Professor of Electrical Engineering and Assistant Dean and Secretary of the College of Engineering
3000 Geddes Road

WILLIAM LEE McCABE, M.S.E., Ph.D., Associate Professor of Chemical Engineering
1436 East Park Place

DEAN BENJAMIN MCALOUGHLIN, Ph.D., Associate Professor of Astronomy
504 Walnut Street

AXEL MARIN, B.S.E.(M.E.), Associate Professor of Mechanical Engineering
2475 Whitmore Lake Road

FREDERICK NORTHROP MENEFEE, C.E., Professor of Engineering Mechanics
6 Geddes Heights

CHARLES FERDINAND MEYER, Ph.D., Associate Professor of Physics
1137 Fair Oaks Parkway

FRANK ALEXANDER MICKLE, M.E., Associate Professor of Mechanical Engineering
1053 Olivia Avenue

HARRY WILLARD MILLER, M.E., Professor of Mechanism and Engineering Drawing and Head of the Department of Mechanism and Engineering Drawing
Longshore Drive

ARTHUR DEARTH MOORE, M.S., Professor of Electrical Engineering
718 Onondaga Street

ROGER LEROY MORRISON, A.M., C.E., Professor of Highway Engineering and Highway Transport
1928 Lorraine Place

JOSEPH RALEIGH NELSON, A.M., Professor of English, Editor of Publications in Engineering Research, and Counselor to Foreign Students
3261 Lohr Road

JOHN MINERT NICKelsen, B.S.(M.E.), Associate Professor of Mechanical Engineering
2011 Day Street

HARRISON W. NORDMEYER, Ph.D., Professor of German and Chairman of the Department of Germanic Languages and Literatures
1416 Granger Avenue

JULIUS CLARK PALMER, B.S., Associate Professor of Mechanism and Engineering Drawing
309 North Ingalls Street

FELIX VLADYSLAW PAWLOWSKI, M.&E.E., M.S., Guggenheim Professor of Aeronautical Engineering
925 Greenwood Avenue

VINCENT COLLINS POOR, Ph.D., Associate Professor of Mathematics
930 Packard Street

LEWIS STEPHEN RAMSDELL, Ph.D., Associate Professor of Mineralogy
1515 Morton Avenue

HARRISON MCALLISTER RANDALL, Ph.D., Professor of Physics, Head of the Department of Physics, and Director of the Physics Laboratory
1208 Prospect Street

DANIEL LESLIE RICH, Ph.D., Associate Professor of Physics
720 East University Avenue
HENRY EARL RIGGS, A.B., C.E., Honorary Professor of Civil Engineering and Honorary Curator of the Transportation Library
Underdown Road, Barton Hills
FREDRICK C. ROGERS, Lieutenant Colonel, U.S.A., Professor of Military Science and Tactics and Head of the Department of Military Science and Tactics
1020 West Huron Street
RICHARD ALFRED ROSSITER, Ph.D., Associate Professor of Astronomy and Astronomer in Charge, Lamont-Hussey Observatory of the University of Michigan
13 Innes Avenue, Bloemfontein, Orange Free State, South Africa
WILL CARL RUFUS, Ph.D., Associate Professor of Astronomy
216 Pine Ridge Street
THEODORE RUDOLPH RUNNING, Ph.D., Professor of Mathematics
1019 Michigan Avenue
HERBERT CHARLES SADLER, D.Sc., LL.D., Professor of Naval Architecture and Marine Engineering and Dean of the College of Engineering
1510 Hill Street
WALTER CLIFFORD SADLER, M.S., C.E., LL.B., Associate Professor of Civil Engineering
1429 White Street
RALPH ALANSON SAWYER, Ph.D., Professor of Physics
1208 Wells Street
CHESTER SEITZ SCHOEPFLE, Sc.D., Professor of Organic Chemistry and Chairman of the Department of Chemistry
2022 Vinewood Boulevard
IRVING DAY SCOTT, Ph.D., Professor of Physiographical Geology
1043 Olivia Avenue
ISAIAH LEO SHARFMAN, A.B., LL.B., Professor of Economics and Chairman of the Department of Economics
1108 Baldwin Avenue
ROBERT HENRY SHERLOCK, B.S.(C.E.), Professor of Civil Engineering
2025 Vinewood Boulevard
ALLEN FIRMAN SHERZER, B.M.E., Professor of Mechanical Engineering
1213 Ferdon Road
WILLIAM WARNER SLEATOR, Ph.D., Associate Professor of Physics and Curator of the East Physics Building
2503 Geddes Avenue
WILLIAM GABB SMEATON, A.B., Professor of General and Physical Chemistry
1941 Geddes Avenue
ARTHUR WHITMORE SMITH, Ph.D., Professor of Physics
1008 Oakland Avenue
EDWARD A. STALKER, M.S., Professor of Aeronautical Engineering and Head of the Department of Aeronautical Engineering
1306 Washtenaw Avenue
*FRANK HOWARD STEVENS, B.S., Associate Professor of Engineering Mechanics
MELVILLE BIGHAM STOUT, M.S., Associate Professor of Electrical Engineering
1417 Morton Avenue
* Died September 7, 1935.
ROY STANLEY SWINTON, M.S.E., Associate Professor of Engineering Mechanics 1114 Woodlawn Avenue
HUGO PAUL THIEME, Ph.D., Professor of French and Chairman of the Department of Romance Languages 3 Geddes Heights
JESSE EARL THORNTON, A.M., Associate Professor of English 1547 Granger Avenue
STEPHEN TIMOSHENKO, Adjunct of Applied Mechanics, Professor of Engineering Mechanics 827 East University Avenue
CLAIR UPTHEGROVE, B.Ch.E., Professor of Metallurgical Engineering 1417 Granger Avenue
JOHN A. VAN DEN BROEK, Ph.D., Professor of Engineering Mechanics 715 Arlington Boulevard
CHRISTIAN NATHANIEL WENGER, Ph.D., Associate Professor of English 1319 Olivia Avenue
ALBERT EASTON WHITE, Sc.D., Professor of Metallurgical Engineering and Director of the Department of Engineering Research 2110 Dorset Road
ALFRED HOLMES WHITE, A.B., B.S.(Ch.E.), Professor of Chemical Engineering and Head of the Department of Chemical and Metallurgical Engineering 608 Onondaga Street
HARLOW OLIN WHITTEMORE, B.S., M.L.D., Associate Professor of Landscape Design, Chairman of the Department of Landscape Design, and Director of the Nichols Arboretum 1920 Norway Road
HOBART HURD WILLARD, Ph.D., Professor of Analytical Chemistry 1926 Norway Road
NEIL HOOKER WILLIAMS, Ph.D., Professor of Physics 1020 Olivia Avenue
CHESTER OWEN WISLER, M.S.E., Professor of Hydraulic Engineering 810 Arch Street
WILLIAM PLATT WOOD, M.S.E., Professor of Metallurgical Engineering Ann Arbor Hills
JOHN STEPHEN WORLEY, C.E., Professor of Transportation Engineering and Curator of the Transportation Library Michigan Union

Assistant Professors

HENRY CARTER ADAMS, II, M.S., Assistant Professor of Naval Architecture and Marine Engineering 1421 Hill Street
GLENN LESLIE ALT, B.S.(C.E.), Assistant Professor of Civil Engineering 918 Sybil Street
LEIGH CHARLES ANDERSON, Ph.D., Assistant Professor of Organic Chemistry 1109 Packard Street
LOUIS ARTHUR BAER, B.Mar.E., Nav.Arch., Assistant Professor of Naval Architecture 408 South Fifth Avenue
RALPH LEROY BELKNAP, Sc.D., Assistant Professor of Geology 112 South Ingalls Street
GEORGE MOYER BLEEKMAN, M.S.E., Assistant Professor of Geodesy and Surveying 1507 Morton Avenue
ROBERT D. BRACKETT, A.M., Assistant Professor of English 1301 Horman Court
PAUL NARCIS BUKOVSKY, M.S., Assistant Professor of Mechanism and Engineering Drawing 1225 White Street
HEMPSTEAD STRATTON BULL, M.S., Assistant Professor of Electrical Engineering 1505 Arlington Road
FLOYD NEWTON CALHOON, M.S., Assistant Professor of Mechanical Engineering 2536 West Liberty Street
ROBERT JOHN CARNEY, Ph.D., Assistant Professor of Analytical Chemistry and Director of Chemistry Store 519 Lawrence Street
LEE OWEN CASE, Ph.D., Assistant Professor of General and Physical Chemistry 1406 Henry Street
RUEL VANCE CHURCHILL, Ph.D., Assistant Professor of Mathematics 1459 Rosewood Street
ALBERT LORING CLARK, Jr., B.S.E.(M.E.), Assistant Professor of Mechanism and Engineering Drawing 14 Ridgeway Street
ROBERT CARL COLE, A.M., Assistant Professor of Mechanism and Engineering Drawing 507 Walnut Street
WILLIAM GOULD DOW, M.S.E., Assistant Professor of Electrical Engineering 1417 Golden Avenue
WILLIAM HENRY EGLY, A.M., Assistant Professor of English 1208 Cambridge Court
MAURICE BARKLEY EICHELBERGER, B.S., Assistant Professor of Mechanism and Engineering Drawing 906 Rose Avenue
WALTER B. FARISS, Captain, U.S.A., Assistant Professor of Military Science and Tactics 818 Lincoln Avenue
ALFRED LYNN FERGUSON, Ph.D., Assistant Professor of General and Physical Chemistry 721 Church Street
FLOYD ALBURN FIRESTONE, Ph.D., Assistant Professor of Physics 619 East University Avenue
JAMES SHERMAN GAULT, M.S., Assistant Professor of Electrical Engineering 1508 Westminster Place
HOLGER MADS HANSEN, B.C.E., Assistant Professor of Engineering Mechanics 1210 Wells Street
ROSSWELL E. HARDY, C.E., M.B.A., Captain, U.S.A., Assistant Professor of Military Science and Tactics 703 Forest Avenue
DEAN ESTES HOBART, B.S., Assistant Professor of Mechanism and Engineering Drawing 1314 Minerva Road
JAMES HALLETT HODGES, Ph.D., Assistant Professor of General and Physical Chemistry 1334 Sheehan Avenue
LEWIS NELSON HOLLAND, M.S., Assistant Professor of Electrical Engineering 1205 Brooklyn Avenue
WILLIAM STUART HOUSEL, M.S.E., Assistant Professor of Civil Engineering 1119 Spring Street
ARNE ARTHUR JAKKULA, M.S., Ph.D., Assistant Professor of Civil Engineering 1303 Brooklyn Avenue
MEMBERS OF THE FACULTY

CLARENCE FRANK KESSLER, M.S.E., Assistant Professor of Mechanical Engineering 1756 Broadway
HENRY LEBRECHT KOHLER, M.E., Assistant Professor of Mechanical Engineering 1516 Greenview Drive
RICHARD THOMAS LIDDICOAT, B.S.E.(C.E.), M.S., Assistant Professor of Engineering Mechanics 1602 Morton Avenue
HAROLD RHYS LLOYD, M.A., Assistant Professor of Mechanical Engineering 1105 Berkshire Road
ROY KENNETH McAULPINE, Ph.D., Assistant Professor of Analytical Chemistry 926 Sylvan Street
DONALD WILLIAM MCCREADY, Ph.D., Assistant Professor of Chemical Engineering 1017 Berkshire Road
HAROLD JAMES McFarlan, B.S.E.(C.E.), Assistant Professor of Geodesy and Surveying 151 Long Shore Drive
LAWRENCE CARNAHAN MAUGH, M.S., Ph.D., Assistant Professor of Civil Engineering 318 Virginia Avenue
ALLAN DOUGLAS MAXWELL, Ph.D., Assistant Professor of Astronomy 1127 East Ann Street
CLIFFORD CYRILLE MELOCHE, Ph.D., Assistant Professor of Analytical Chemistry 824 Granger Avenue
CHARLES THOMAS OLMSTED, B.S.(C.E.), Assistant Professor of Engineering Mechanics Barton Hills
PHILIP ORLAND POTTS, B.M.E., Assistant Professor of Mechanism and Engineering Drawing 3060 Dover Road
LOUIS JOSEPH ROUSE, Ph.D., Assistant Professor of Mathematics 1137 Michigan Avenue
JAMES HAGOOD SAMS, JR., E.E., M.S., Assistant Professor of Mechanical Engineering 1208 Olivia Avenue
TATTNALL D. SIMKINS, Major, U.S.A., B.S. in C.E., Assistant Professor of Military Science and Tactics 1942 Cambridge Road
CHESTER BAKER SLAWSON, Ph.D., Assistant Professor of Mineralogy 1415 Brooklyn Avenue
WILLIAM WARNER SLEATOR, Ph.D., Assistant Professor of Physics 2503 Geddes Avenue
WILLIAM ALLEN SPINDLER, B.S.E.(Ch.E.), M.S., Assistant Professor of Metal Processing 211 South Division Street
LARS THOMASSEN, Ch.E., Ph.D., Assistant Professor of Chemical Engineering 2115 Woodside Road
MILTON JOHN THOMPSON, Sc.D., Assistant Professor of Aeronautical Engineering 1511 Morton Avenue
MERTON G. WALLINGTON, Captain, U.S.A., Assistant Professor of Military Science and Tactics 1129 Ferdon Road
IVAN HENRY WALTON, A.M., Assistant Professor of English 1506 Golden Street
HARRY JAMES WATSON, B.M.E., Assistant Professor of Mechanical Engineering 1510 Morton Avenue
PHILIP FRANCIS WEATHERILL, Ph.D., Assistant Professor of General and Physical Chemistry 1113 Ferdon Road
EDWARD YOUNG, B.S.E.(C.E.), Assistant Professor of Geodesy and Surveying 1600 Montclair Place

Engineering Research
CLAUDE LESTER CLARK, Research Engineer 1401 Brooklyn Avenue
LEONARD ARNOLD DELP, M.S.Chem., Research Associate 429 Hilltop Drive
PAUL HAROLD GEIGER, Ph.D., Research Physicist 1715 Hermitage Road
CHARLES WINFRED GOOD, B.S.E.(M.E.), Assistant to the Director 622 South Seventh Street
DONALD WILLIAM MURPHY, Sc.D., Research Associate 1102 Forest Avenue
JOSEPH RALEIGH NELSON, A.M., Editor of Publications 3261 Lohr Road
HARRY O. POTTER, A.B., Assistant to the Director 1120 Oakland Avenue
RICHARD SCHNEIDEWIND, Ph.D., Research Engineer 1402 Washington Heights
MARLAND BLICK SMALL, A.B., Assistant to the Director 715 South Forest Avenue
HARVARD BURTON VINCENT, Ph.D., Research Physicist 607 Sunset Road
JAMES HERBERT WALKER, B.M.E. Honorary Research Engineer
Detroit Edison Company, Detroit
ALBERT EASTON WHITE, Sc.D., Director of the Department of Engineering Research 2110 Dorset Road
RALPH A. WOLFE, Ph.D., Research Physicist 1709 Hermitage Road

Instructors
EDWIN A. BOYD, Instructor in Highway Laboratory Practice 832 Brookwood Place
BEN DUSHNIK, Ph.D., Instructor in Mathematics 809 East Kingsley Street
FRANKLIN LELAND EVERETT, M.S.E., Ph.D., Instructor in Engineering Mechanics 1808 Maryfield Drive
WILLIAM WAYNE GILBERT, Sc.D., Instructor in Metal Processing 1308 Granger Avenue
JOHN GRENNAN, Instructor in Foundry Practice 719 South Seventh Street
HOWARD SCHOLL KALTENBORN, Ph.D., Instructor in Mathematics 123 North Thayer Street
DONAT KONSTANTIN KAZARINOFF, University of Moscow Diploma, Instructor in Mathematics 1515 Cambridge Road
LEO KIRSCHBAUM, A.M., Instructor in English 1338 Washtenaw Avenue
Hazel Marie Losh, Ph.D., Instructor and Research Assistant in Astronomy 844 East University Avenue
WILLIAM HARRISON MACK, A.M., Instructor in English 1126 Martin Place
EDWIN WILKINSON MILLER, Ph.D., Instructor in Mathematics
418 North Division Street

ARTHUR FRANKLIN PARKER, Instructor in Machine Shop Practice
1510 Harding Road

BURDELL LEONARD SPRINGER, M.S., Instructor in Aeronautical Engineering
528 Elm Street

WILLIAM TELFER, Instructor in the Working, Treating, and Welding of Steel
R.R. 2, Washtenaw Road

WILLIAM HARVEY TENNEY, A.M., Instructor in English
2530 Emerald Avenue

ROBLEY C. WILLIAMS, Ph.D., Instructor in Astronomy
1710 Geddes Avenue

DONOVAN HAROLD YOUNG, Sc.D., Instructor in Engineering Mechanics
413 Soule Boulevard

EXECUTIVE COMMITTEE
Dean H. C. Sadler, Chairman ex officio
Professor A. H. White, term four years
Professor J. E. Emswiler, term, three years
Professor H. W. Miller, term, two years
Professor R. H. Sherlock, term, one year

STANDING COMMITTEE

COMMITTEES OF THE COLLEGE OF ENGINEERING
Committee on Classification:

Committee on Delinquent Students:
Professors H. W. King, R. H. Sherlock, and C. B. Gordy

Committee on Discipline:
Professor A. Marin, Assistant Dean A. H. Lovell, and Professor R. H. Sherlock

Committee on English for Foreign Students:
Professors J. R. Nelson, H. W. King, H. H. Higbie, and C. E. Burklund

Committee on Extension of Time:
Professors C. O. Wisler, J. M. Nickelsen, and R. A. Dodge

Committee on Scholarships:
Professors H. W. Miller, J. C. Brier, and Peter Field, and Dean H. C. Sadler, ex officio

Committee on Substitution:
Professors B. F. Bailey, E. M. Bragg, J. H. Cissel, and A. O. Lee
Part II

GENERAL INFORMATION

HISTORY

1. The University of Michigan, founded in 1817, is a part of the educational system of the State, and derives from the State the greater part of its revenue. The University comprises the Colleges of Literature, Science, and the Arts, of Engineering, of Architecture, and of Pharmacy, the Medical School, the Law School, the School of Dentistry, the School of Education, the School of Business Administration, the School of Forestry and Conservation, the School of Music, and the Graduate School, each of which publishes a separate annual announcement. The various Faculties include over eight hundred officers of instruction. During the past year, over 13,000 students, representing all the states and territories and many foreign countries, were registered at the University of Michigan.

In the legislative act of 1837, under which the University was organized in its present form, provision was made for instruction in engineering. There are few older technical schools in the United States. The first professor of civil engineering was appointed in 1853, and the first degrees were conferred in 1860. The engineering courses were included in the College of Literature, Science, and the Arts until the close of the collegiate year 1894–95. At that time the College of Engineering was established by the Board of Regents as a separate Department of the University.

The aim of the College of Engineering is to lay a foundation of sound theory, sufficiently broad and deep to enable their graduates to enter understandingly upon a further investigation of the several specialties of the engineering profession; and at the same time to impart such a knowledge of the usual professional practice as shall make the students useful upon graduation in any subordinate position to which they may be called. While the adaptation of theory to practice can be thoroughly learned only by experience, there are many matters in which the routine work of an engineering field party, office, or drafting room can be carried out, on a greater or less scale, in a training school. The technical branches are under the direct charge of those who have had professional experience as well as a full scientific training. The instruction fits the students, as far as possible, for the requirements of active practice. The Department of Engineering Research was established in 1920. The general function and purpose of this department is to cooperate in every proper manner with the industries of the State.

2. Students at the University of Michigan enjoy many privi-
The Student Christian Association and the Ann Arbor churches minister to the spiritual, religious, and social needs of the student body; the pastors and assistant ministers have largely been chosen because of their effective work with young people.

The University Musical Society provides unusual musical advantages, including several series of concerts, either at moderate price or without charge, in which leading artists of the country and from abroad and local musicians take part. The University has in its galleries a small art collection of great merit, and the Ann Arbor Art Association gives during the year several loan exhibitions.

University lectures are given without charge throughout the year by scientists, publicists, men of letters, and others; the Oratorical Association conducts a series of lectures at moderate prices in which important lecturers appear.

**PROGRAMS OF STUDY**

3. The College of Engineering has four-year programs of study in aeronautical, chemical, civil (including transportation), electrical, mechanical, and metallurgical engineering, geodesy and surveying, naval architecture and marine engineering, astronomy, engineering mechanics, mathematics, and physics.

The work offered by the several departments is usually broader than the name of the department may indicate. For example, under Chemical Engineering will be found metallurgical, industrial, and general chemical engineering; under Civil Engineering will be found structural, hydraulic, transportation, sanitary, and municipal engineering; under Electrical Engineering will be found power, communication, and illumination engineering and electrical design; under Geodesy and Surveying will be found geodesy, topographic and boundary surveying, and courses on the legal and administrative problems involved in titles and boundaries; under Mechanical Engineering will be found steam power, internal combustion, hydro-mechanical, heating, ventilating and refrigerating, automobile, and industrial engineering, and machine design; under Naval Architecture and Marine Engineering will be found in addition water transportation.

The University of Michigan is very fortunate in having unusual facilities for the study of transportation, including a special transportation library containing 100,000 items, and departments offering instruction in aeronautical, automobile, marine, railway, highway, and electrical engineering—including the design and construction of vehicles of transportation and of electric communication (telephone, telegraph, and radio)—and in economics, business administration, and other subjects of importance to the student of transportation. The curriculum in transportation has as a foundation the courses common to the present professional curricula.

The College of Engineering and the Schools of Business Administration, Forestry, and Law, of the University, offer five- or
six-year combined courses to meet the needs of those who expect to follow a career in which an engineering background is desirable.

The student in the combined course is registered for the first three years in the College of Engineering, and for the subsequent two or three years in one of the other schools. On the completion of the three-year curriculum in the College of Engineering with a minimum average of 2.5,* the student is recommended for transfer to one of the other schools.

On the satisfactory completion of the first year in one of the other Schools, the student will be recommended for the degree of Bachelor of Science in Engineering. The diploma given will bear the legend of the School to which transfer is made.

Students in the College of Engineering transferring to one of the other Schools without having completed the first three years of the combined course with the required grade will not be recommended by the College of Engineering for its degree.

Attention is called to the fact that the College of Engineering requires a higher average grade for its recommendation for transfer to one of the other Schools on the combined course than it does for graduation in the general four-year curricula.

For details see sections 83, 84, and 85.

In cooperation with the School of Education, the College has programs in which, after the student earns his degree of Bachelor of Science in Engineering, he may meet the requirements for a Teacher's Certificate by additional work under the direction of the Faculty of the School of Education.

For details see section 58.

The Civil Engineering Department offers a coöperative program in highway engineering in which the summer is spent with the Highway Department of the State or of an important county. For details see section 75.

The Electrical Engineering Department offers a five-year coöperative program with industry, conforming substantially to the following principles: coöperative relations will be established only with such industries as are able and willing to offer a definite program of graded work of educational value. The student will undertake the coöperative work during periods of an entire semester or of an entire summer session. Credit for the coöperative work will be given only on completion of the entire prescribed program. For details see section 76.

**COMBINED PROGRAMS WITH OTHER INSTITUTIONS**

4. The College of Engineering has an agreement with Albion, Olivet, and Battle Creek Colleges under which a student who has been in residence at one of these colleges for three years and has completed with a good record a prearranged program including sub-

* For grading system, see section 35.
substantially the work of the first two years of the College of Engineering may be admitted to the College of Engineering, and after two additional years may be graduated in engineering.

A college under this agreement accepts the first year at the College of Engineering in lieu of its senior year, and if the student's record is satisfactory, graduates him.

ORIENTATION PERIOD

5. During Orientation Period, before the opening of school, the campus is virtually turned over to new students. Each group of twenty is placed in charge of a faculty adviser. Routine matters, such as payment of fees, medical examination, and classification, are handled in such a way that waiting in long lines is eliminated as far as possible. In addition, many special features, such as talks, sings, mixers, inspection trips, and discussion groups are included, the whole purpose being to give the student a proper introduction to the University. Further detailed information is furnished to each freshman on acceptance of his application.

ACADEMIC YEAR AND SUMMER SESSION

6. The academic year extends from September to June of the following year. See the University calendar, pages 4 and 5. The Summer Session, between the student's first and second, second and third, or third and fourth years, extends eight weeks, from the Monday of the second week following Commencement.

Every student in the College of Engineering, in order to finish his program in four years, is expected to attend one Summer Session.

SUGGESTIONS AND DIRECTIONS

7. New students expecting to take the examinations for admission to the University must present themselves on the dates specified for examinations for admission. See section 13.

All freshmen are required to report in September for registration and the activities of Orientation Period. No freshman will be excused from attendance during Orientation Period except on account of illness. A complete program will be furnished to all freshmen accepted for admission.

Students on arriving in Ann Arbor can obtain information in regard to rooms and board by calling at the Office of the Dean of Students, Room 2, University Hall. His secretaries are actively interested in assisting newcomers to find rooms and boarding places, and conduct a free employment bureau for the benefit of students.

When admitted, every student will be furnished with a booklet containing directions for subsequent procedure.
REQUIREMENTS FOR ADMISSION

ADMISSION

8. The requirements for admission are the same for all students in Engineering.

Applicants must be at least sixteen years of age, and must present satisfactory evidence of good moral character. For freshmen, the record of work done in the preparatory school must be presented on a form to be obtained from the Registrar of the University; for students transferring from other colleges, the transcript of record usually includes a satisfactory statement.

Students may be admitted on certificate, by examination, on credits from another college, or by a combination of these. They may also be admitted as special students.

FOREIGN STUDENTS

9. All students whose native language is other than English shall, upon matriculation and registration in the College of Engineering, be required to report at once to Professor J. R. Nelson, Chairman of the Committee on English for Foreign Students. Such students shall satisfy the Committee that they possess a sufficient knowledge of English to carry on work in the College of Engineering before they may be classified.

On the recommendation of the Committee they may be referred to the proper classifier, who will give them such a program of work as he deems best. For his first semester, however, every foreign student is considered as on trial. If at the end of the semester he passes his work, credit will be given; if, however, in spite of conscientious effort he fails, and his difficulties are, in the judgment of his instructors and of the Committee on English, due primarily to his lack of facility in the use of the English language, his record will be disregarded but he will then be remanded to the Department of English for such work in English as he needs, to the limit of eight hours.

If a student is judged by the Committee on English to be unfitted even for such a trial program as that outlined above, he will be required to take for one semester such work in English as the Committee thinks necessary, and may be allowed to visit such classes as may in the judgment of the Committee be profitable to him.

REQUIREMENTS FOR ADMISSION

10. a) Requirements for admission are stated in units, a unit being defined as a course covering an academic year and including in the aggregate not less than the equivalent of one hundred and twenty sixty-minute hours of classroom work. Two to three hours of laboratory, drawing, or shop work are counted as equivalent to one of recitation.

Applicants for admission as freshmen must present a minimum of 15 units which must include four sequences, two major sequences from Groups A and C and two minor sequences from Groups B and D. A
major sequence consists of a minimum of 3 units, a minor sequence of a minimum of 2 units.

**UNITS**

**A. English**
A major sequence of at least 3 units is required .......................... 3

**B. Foreign Language Group**
A minor sequence of 2 units of a single language, Greek, Latin, French, German, or Spanish is required .......................... 2

**C. Mathematics Group**
A major sequence of at least 3 units is required. This shall include algebra 1 unit, advanced algebra ½ unit, plane geometry 1 unit, and solid geometry ½ unit ........................ 3
(In addition, trigonometry ½ unit is urgently advised.)

**D. Science Group**
A minor sequence of 2 units is required. This shall consist of 1 unit of physics and preferably 1 unit of chemistry, though botany, zoology, or biology may be offered in place of chemistry 2

**E. The remaining units** required to make up the necessary 15 units are elective from among the subjects listed above and any others which are counted toward graduation by the accredited school. It is recommended that 1 unit of history, or ½ unit of American government and ½ unit of American history, be included in this group. (Such half units are acceptable only if taken in the eleventh or twelfth grade.) .......................... 5

Total ........................................... 15

_Provisional Admission._ In general, an applicant for admission either by certificate or by examination who lacks not more than 2 of the units prescribed may, if he presents 15 acceptable units, be admitted provisionally. These deficiencies must be made up during the first year of residence, without credit toward graduation, but if elected in college will be used in determining the semester grade average. No student who has an admission deficiency outstanding at the beginning of his second year of residence will be allowed to enter his classes until such deficiency is removed. Only those applicants may be admitted provisionally who, in addition to fulfilling the above conditions, are unqualifiedly recommended by their principals for admission.

**NOTES ON THESE REQUIREMENTS**

b) _English._—Four units of English should always be presented whenever it is possible.

c) _Foreign Language._—No less than two units of any language will be accepted for admission. Foreign languages other than those listed are sometimes accepted, in the case of students whose
native language is other than English. These cases will be considered individually.

d) Chemistry and Trigonometry.—It is urgently advised that one unit of Chemistry and one-half unit of Trigonometry be included in the fifteen units offered for admission. The student who presents the full requirements without Chemistry and Trigonometry must take Chemistry 3 and Mathematics 8 in his first college year, which may necessitate more than the usual time to complete the graduation requirements. Chemistry and Trigonometry are offered in the Summer Session to accommodate those students who wish instruction in them before entering college.

11. **Scope of Preparatory Work Expected by the University.**

When one or more units are offered for admission in any subject the work done in that subject should have been of such a character as to qualify the student to pursue it in the University as a continuation study.

Detailed descriptive outlines of the amount of preparation expected in the admission subjects are given in the annual report of the University Bureau of Coöperation with Educational Institutions, a copy of which may be had upon request to the director of the bureau. In general, the standards set up by the Commission on Accredited Schools and Colleges of the North Central Association of Colleges and Secondary Schools will be recognized in adjusting high-school credits.

**ADMISSION ON CERTIFICATE**

12. Only those applicants are admitted on certificate who are officially recommended graduates of high schools accredited to this University* and have completed in a standard high school a full four-year curriculum covering at least fifteen units of acceptable entrance credit.

In the recommendation of graduates for admission to the University, it is expected that principals of secondary schools will take into consideration the character, scholarship interests and attainments, seriousness of purpose, and intellectual promise of the individual concerned.

The principals of approved schools are urged to send direct to the Registrar, immediately at the close of the first semester of the senior year, upon the blank furnished by the University, the application of each prospective graduate intending to enter the freshman class at the beginning of the ensuing year. The applicant will be given a tentative report concerning his eligibility for admission, which will be confirmed when the principal's supplementary report of the final semester's work has been received by the Registrar. If the appli-

* A bulletin containing a list of the accredited schools in the state of Michigan will be sent upon request to the Bureau of Coöperation with Educational Institutions, University of Michigan.
cand’s credentials are satisfactory, he will receive a certificate of admission to the University without examination, contingent only upon the passing of a medical examination at the time of registration.

As a general rule no advanced credit will be given for work done in the usual high-school course. However, college credit may be given for languages presented in excess of the fifteen units required for admission, if the courses are deemed equivalent to similar courses in the University. Such credit will be adjusted after admission.

A student who for any reason has failed to secure a certificate of graduation and his principal’s recommendation will be required to pass the regular examinations for entrance in all subjects.

Certificates from schools other than those officially approved by the University do not excuse an applicant from the admission examinations.

ADMISSION BY EXAMINATION

13. Fifteen units are required for admission. Ten of these units are prescribed as shown in the four sequences of section 10. The five units remaining may be presented in any of the other subjects mentioned under admission requirements in section 10.*

Candidates for admission who are graduates of accredited high schools and whose principals are willing to certify them in a part of the required 15 units may, at the discretion of the Registrar, be admitted by certificate covering the units satisfactorily completed plus examinations covering the remaining units required for admission. For this purpose examinations will be provided only in the subjects listed under the specific groups in the requirements for admission of this College.

Candidates for admission who have passed College Board, New York State Regents, or Canadian Matriculation Examinations with satisfactory grades will be excused from further examinations in the subjects covered. All applications for examination by the College Entrance Examination Board must be addressed to the Secretary, 431 West 117th Street, New York, N.Y., and must be made on a blank form to be obtained from its Secretary on application.

Those applicants for admission who are not entitled to enter on certificate, and who wish to take the entrance examinations given by the University should make definite arrangements with the Registrar at least one month in advance of the dates set for the examination. Entrance examinations are held each year in September, February, and June.

The applicant may divide the examinations, taking one part either a year or a semester before the date of his admission, and the second part at the time of admission. But if he fails to secure the requisite number of units within this specified time he forfeits all credits for the subjects he may have passed.

*The conditions under which an applicant may be admitted provisionally are given in section 10.
Applicants presenting themselves too late for the scheduled examinations are required to pay an examination fee of five dollars.

Students desiring to validate credits in zoology by the examination method must present laboratory notebooks at the time of the examinations.

An applicant who fails in some of the examinations, but passes fifteen units, may be admitted provisionally; but all deficiencies must be made up within one year.

ADMISSION TO ADVANCED STANDING

14. A student in another college or university who intends to enter the College of Engineering with advanced standing should examine carefully the curriculum of the department in which he intends to specialize, and arrange his work accordingly.

As a rule he should have completed the required work in English, mathematics, physics, chemistry, and the nontechnical subjects, and in drawing and engineering mechanics if his institution offers adequate instruction in them.

The remaining requirements for students of Engineering can usually be completed in two years, if the student takes as electives, while an undergraduate, the mathematics required of Engineering students and Courses 1, 2, and 3 in drawing. Students in the College of Literature, Science, and the Arts, who desire to transfer to the College of Engineering should consult officials of the College of Literature, Science, and the Arts regarding required and permissible elections.

He is advised to write to the head of the department in which he wishes to specialize for advice and for information not found in this bulletin. The Assistant Dean of the College of Engineering will be glad to give information concerning admission requirements or other matters of a general nature.

Students who receive on admission less than twenty-four hours of advanced credit are tentatively considered as freshmen; those presumably to be graduated within one year are considered as seniors.

a) Graduates of the University and of approved colleges are admitted without examination to advanced standing as candidates for a degree in Engineering.

They should present to the Assistant Dean an official certificate of their graduation—not their diploma—and an official copy of the record of the studies they have completed, showing the subjects studied, the number of weeks devoted to each, and the number of class periods a week.

A student who has completed a regular four-year course at an approved college or other institution may be admitted to the College of Engineering as a senior provided that, in general, the course completed has covered substantially the equivalent of the required work in the first three years of the program he desires to follow at the University of Michigan. The courses to be taken during resi-
dence at the University will depend upon his previous training and will be determined by the Head of the Department concerned. Upon the satisfactory completion of such courses, covering at least one year's residence, the student will be recommended for the degree of Bachelor of Science in Engineering.

b) A student who has completed at least one year of work in an approved college may be admitted to advanced standing without examination, except such as may be necessary to determine what credits he is entitled to receive.

An applicant must present a letter of honorable dismissal from college, an official copy of his college record, and an official record of his preparatory studies, similar to those required of students admitted on certificate. See section 12.

c) A student who has not completed a year's college work in an approved college, but before entering the University has pursued studies beyond those required for admission, may be admitted to advanced standing. Entrance requirements in such cases may be satisfied by complying with the conditions stated in either section 12 or 13.

ADMISSION ON COMBINED PROGRAMS

15. Students who have completed the first three years of the combined programs arranged by the College of Engineering with Albion, Olivet, and Battle Creek Colleges are admitted as juniors. For the admission of other students from these colleges see the regulations in section 14.

ADJUSTMENT OF ADVANCED CREDITS

16. All advanced credits are adjusted by the Assistant Dean of the College of Engineering; and, until a transcript of record at another institution or other like information is furnished, no one is authorized to say what credit may be given for work done elsewhere or what class a student may enter after having attended another college for a specified time.

The requirements for admission must be complied with before any advanced credit is given.

Advanced credit is given only upon examination or upon an official transcript covering the work done, and showing the scholarship or proficiency attained.

Advanced credit for studies taken elsewhere is given only for work equivalent to courses offered in the University of Michigan and is adjusted in terms of semester hours completed without any scholastic grade being assigned to this credit. The student's scholastic average after entrance is determined by grades earned in this College alone.

Applicants for advanced credit should apply at the time of entrance at Room 255, West Engineering Building. It is desirable that credentials should be submitted as far in advance of registration week as practicable. Students desiring advanced standing in drawing must bring all drawings completed previous to entrance.
Advanced credits should be secured upon entrance. To apply for advanced credit at a later date, students must secure the permission of the Assistant Dean, giving a satisfactory reason for the delay in making the application.

ADMISSION AS GRADUATE STUDENTS

17. Higher degrees in Engineering are conferred in the Graduate School of the University. See the Announcements of the Graduate School.

ADMISSION AS SPECIAL STUDENTS

18. Students who are pursuing work in college, and are not candidates for a degree, are designated Special Students.

Persons over twenty-one years of age who wish to pursue particular studies in Engineering, and who show by examination or by the presentation of satisfactory certificates that they are prepared to do good work in the selected courses, may be admitted as special students on the recommendation of the heads of the departments of instruction in which they wish to study. The object of this rule is to enable young men who are beyond the high-school age to secure technical training along special lines when they are properly prepared for the work. Two or more years of successful experience as teacher, draftsman, surveyor, engineer, or operative in engineering work will be given considerable weight in determining the fitness of the candidate. In general, a good working knowledge of English, algebra, and geometry is required in order to succeed in engineering studies. Applicants for admission as special students should send as early as possible to the head of the department concerned letters of recommendation, certificates of scholarship, and an exact statement of the courses desired.

College graduates are also admitted as special students and may take those courses for which their preparation is sufficient.

Candidates for admission as special students should state their age and what their education and experience have been. They should send letters of recommendation from former employers and bring drawings to demonstrate their experience and ability.

Special students pay the same fees as regular students. Their work is assigned and regulated by the heads of the departments of instruction in which they register.

A special student may become a candidate for a degree by fulfilling the regular requirements for admission. See section 10.

A student who is a candidate for a degree cannot become a special student without the permission of the Faculty.

FEES AND EXPENSES

19. The semester fee must be paid before classifying for studies, and no student can enter upon his work until after such payment. Detailed information regarding registration and payment of fees,
also directions for classification, may be obtained from the Secretary of the College.

To cover expenses students are urged to provide themselves with money orders or traveler's checks. For the convenience of students, the Cashier's Office will cash or accept in payment of tuition or other University fees money orders or traveler's checks. Personal checks will not be cashed, but will be accepted for the exact amount of fees.

**Semester Fees.**—Every student has to pay a semester fee. For Michigan students, the semester fee in the College of Engineering is $60 for each semester; for non-Michigan students, $80 for each semester.

These fees cover class instruction, use of libraries, outdoor physical education, and admission to all athletic events, membership in the Michigan Union or Michigan League, as well as medical attention from the University Health Service and dispensary.

**Part-Time Fees.**—Based on the payment of either $15 or $25 a semester, part-time fees are divided into two groups. The payment of $15 a semester entitles the student to the following privileges: (1) the election of not more than three hours a semester; (2) consultation with faculty members while working on theses or preparing for doctoral examinations and also the use of the library; and (3) a combination of the privileges listed under (1) and (2). The payment of $25 a semester entitles the student to elect four, five, or six hours a semester. Students in these two groups pay a Health Service fee of $7.50 a semester unless exempted under regulations governing the Health Service. They may also obtain privileges of outdoor physical education and Michigan Union or Michigan League upon payment of the appropriate incidental fees at the time of registration.

**Determination of Legal Residence.**—Residence in Michigan for the purpose of registration shall be determined according to the State constitutional provision governing the residence of electors (see Article III, Sections 1 and 2); that is, no one shall be deemed a resident of Michigan for the purpose of registration in the University of Michigan unless he is a citizen of the United States who has resided in this State six months next preceding the date of his proposed enrollment, and no person shall be deemed to have gained or lost a residence in this State while a student in the University. The residence of a minor shall follow that of the legal guardian. The residence of a wife shall follow that of the husband. Aliens who have taken out their first citizenship papers and have otherwise met these requirements for residence shall be regarded as eligible for registration as residents of Michigan. Any student who registers improperly under this rule shall, when discovered, be required to pay not only the proper nonresident fees, but shall be assessed, as an addition to the semester fee, the sum of $10.00.
FEES AND EXPENSES

Late Registration.—Registration (i.e., enrollment, payment of fees, and classification) must be entirely completed before the first day of the semester. Students failing to complete their registration before the first day of any semester are required to pay a late registration fee of $1.00 a day up to a maximum of $3.00. In addition a fee of $1.00 will be assessed students who do not complete their classification before the first day of the semester.

Fee for Special Entrance Examination.—An applicant for admission who desires to take the entrance examination at a time other than that announced is required to pay to the University Cashier a fee of $5.00 before permission to take one or more examinations can be granted him.

Laboratory Fees.—There are no laboratory fees but students in chemical laboratory courses must make a cash deposit to pay for materials used and for breakage.

Camp Fee.—Extra fees, in addition to the regular tuition for the Summer Session, are required of students who take Course 3 in Surveying (at Camp Davis). See section 78.

Indebtedness to the University.—Students shall pay all accounts due the University not later than the last day of classes of each semester or summer session. Student loans which fall due during any semester or summer session which are not paid or renewed are sub-exempt. Any unpaid accounts at the close of business on the last day of classes will be reported to the Cashier of the University and:

a) All academic credits will be withheld, the grades for the semester or summer session just completed will not be released, and no transcripts of credits will be issued.

b) Students owing such accounts will not be allowed to register in any subsequent semester or summer session until payment has been made.

c) Power is vested in the University authorities to request the withdrawal of any student who through oversight has been allowed to register contrary to this regulation.

Graduation.—The by-laws of the Board of Regents prescribe that no person shall be recommended for a degree until he has paid all money due the University. To receive a degree at Commencement the candidate must be present in person. Others who have satisfied all the requirements for graduation, including the payment of all dues, will receive their degrees at a subsequent meeting of the Board of Regents.

Other Expenses.—Fletcher Hall, a dormitory accommodating approximately 60 men, is owned and operated by the University, but rooming houses provide for the majority of the men students
during their first year in Ann Arbor. The office of the Dean of Students maintains lists of approved houses for men students. In order to avoid, so far as possible, misunderstandings between landlord and student, a uniform lease or memorandum of agreement has been prepared. Such agreements are issued by the University and should be used by the student. Students are required to make their own reservations, since the University feels that the student should see rooms before engaging them.

All freshman men are required to live in Fletcher Hall or approved men's rooming houses, and no unmarried male student is allowed to live in an apartment or in a rooming house in which there is no landlady in residence without permission of the Dean of Students. Students in approved houses rent their rooms for the semester, and are not to move without permission of the Dean of Students or his representative.

Room rent varies from $2.00 to as high as $5.00 a week for each student. The cost of board is from $5.00 to $7.00 a week.

Annual Expenses.—The expenses of the average student, during his first year in the College, not including clothing, railroad fare, and vacations, are estimated at $600 for residents of Michigan, $640 for nonresidents. Many students are enabled to complete their course by withdrawing for a year or two to earn money to carry them through the remaining years.

Estimated Expenses

</table>

To insure work of the required standard the drawing equipment and slide rule should not be bought before coming to Ann Arbor.

The cost of attending the Camp Davis Summer Session is about $150. See section 78.

REFUND OF FEES

20. 1. No student will be entitled to a refund in accordance with scale below except upon (a) presentation to the Cashier of the University of a certificate of withdrawal from the proper official of the school or college from which he or she is withdrawing, and
(b) surrender to the Cashier of the University of the student receipt, the outdoor physical education coupon or book, together with tickets issued to such student for future athletic events, the Michigan Union or Michigan League annual membership card, and the student identification card (if one has been issued). In case of loss of the student receipt, $5.00 will be deducted from the refund as a penalty and a further deduction of $1.00 will be made if the student identification card is not surrendered. If the athletic coupon or book or tickets for future athletic events are not surrendered, deductions at face value will be made for such items.

2. No refund will be granted unless applied for within one year after withdrawal.
3. A student who withdraws not more than two weeks after his registration will be entitled to a refund of his entire semester fee.
4. A student who withdraws more than two weeks and less than four weeks after the beginning of the semester will be entitled to a refund of one-half his semester fee.
5. A student who withdraws more than four weeks and not later than eight weeks after the beginning of the semester will be entitled to a refund of 40 per cent of his semester fee.
6. A student who transfers from one school or college to another will receive a full refund of his fee in the school or college in which he first enrolled and will be required to pay the full semester fee in the school or college to which he transfers.
7. A student who transfers from full-time to part-time status will receive a refund in accordance with regulations 3, 4, and 5 above and will be required to pay the entire part-time semester fee.
8. A student who transfers from part-time to full-time status will receive a full refund of the part-time semester fee and will be required to pay the entire full-time semester fee.
9. Refunds for Summer Session or short courses will be made pro rata on the basis of the foregoing rules.

**SELF-SUPPORTING STUDENTS AND STUDENT EMPLOYMENT**

21. The normal number of hours that students should carry each semester is between sixteen and eighteen. Students who support themselves wholly or in part should elect a smaller number of hours. It is very difficult for a student supporting himself to carry a full schedule and retain his health. It is even more difficult under such conditions to carry a full schedule and do justice to his college work.

The University does not undertake to furnish manual labor to students; yet a considerable number find opportunities in the city to meet a portion of their expenses. The Faculty recommends to such students that they should not attempt to carry the full amount of work outlined. Much more efficient work can be accomplished by
taking a longer time to cover the curriculum. Each student doing outside work should notify his classifier of such fact at the time of classification.

Students desiring employment should apply in person or by letter before they come to Ann Arbor, to the Dean of Students, Room 2, University Hall.

FELLOWSHIPS AND SCHOLARSHIPS

22. There are a number of fellowships and scholarships in the College of Engineering. For details see sections 44–45.

There are also appointed annually a few assistants at salaries ranging from $100 to $200. For the most part, these assistants are graduate students and seniors who have shown themselves proficient in certain lines.

RELATION OF STUDENTS TO THE CIVIL AUTHORITIES

23. Students are temporarily residents of the city, and, like all other residents, are amenable to the laws. If guilty of disorder or crime, they are liable to arrest, fines, and imprisonment. A rule of the University provides that, if a student is arrested, or is convicted by the civil authorities, he shall be cited to appear before the University Committee on Student Conduct or Faculty of the College in which he is matriculated, and shall be liable to suspension or expulsion.

MICHIGAN UNION AND MICHIGAN LEAGUE

24. The University of Michigan Union was organized and incorporated under the laws of the state of Michigan in 1904 to establish a University social center, to provide a meeting place for faculty, alumni, and students of the University, to furnish a home for alumni when in Ann Arbor, and a place for wholesome relaxation for students. As a social center it encourages and stimulates activities that are for the welfare and enjoyment of the student body, thus fostering a richer, more intense University life, a product of the student’s own work. In recognizing neither artificial barriers nor distinctions, the Union serves as a democratizing influence on the student body; in emphasizing the social value of education, it complements the work of the University in its endeavor to graduate broadly educated men and good citizens. Membership in the Union is restricted to men.

The Union Building is exceptionally well appointed. Among its many attractions are a swimming pool, six bowling alleys, a barber shop, a billiard room with twenty-four tables, a library, lounging room, restaurant service, including a cafeteria, a main dining room, and an assembly hall adapted to use for banquets, meetings, conventions, smokers, concerts, and dances, and forty-nine sleeping rooms
for the alumni and guests of members accommodating sixty-eight persons.

The following men students are entitled to all the privileges of the Michigan Union:
   a) Those who pay the full-time semester fee.
   b) Part-time students during the regular session and holders of fellowships or scholarships that do not include the privileges of the Michigan Union who elect to pay an additional amount of $5.00 per semester.
   c) Those enrolled for full-time work in Ann Arbor during the Summer Session.

Payment of the Union fee under (a) and (b), above, during four college years automatically secures a life membership in the Michigan Union.

The Michigan League is the women's self-governing organization at the University. Every undergraduate woman becomes a member upon entering the University and is entitled to all the privileges offered by the organization.

The Michigan League Building, erected by alumnae and friends of the University and completed in 1929, provides for the women of the University a clubhouse similar in scope to that of the Michigan Union for men.

The following women students are entitled to all the privileges of the Michigan League:
   a) Those who pay the full-time semester fee.
   b) Part-time students during the regular session and holders of fellowships or scholarships that do not include the privileges of the Michigan League who elect to pay an additional amount of $5.00 per semester.
   c) Those enrolled for full-time work in Ann Arbor during the Summer Session.

Payment of the League fee under (a) or (b), above, during four college years automatically secures a life membership in the Michigan League.

**UNIVERSITY HEALTH SERVICE**

25. The University Health Service, which is located on North University Avenue, concerns itself with many factors that are important in preventive medicine, as well as with curative measures, in its efforts to conserve the health of students. These activities are supported by a portion of the semester fee. The Health Service provides for practically all medical attention the student needs during the school year, and is open also to students of the Summer Session and to students remaining during the regular vacations.

The Health Service Dispensary, where students may receive any office medical attention, including special examinations and the usual medicines, is open regularly during class hours. A student may consult any physician of the Health Service at choice. If a student receives attention from a Health Service physician at his room, a
charge of $1.00 for a day call and $2.00 for a night call is made. The corps of physicians in the Medical School cooperates with the Health Service whenever students need the attention of such specialists. Health Service attention is extended to full-time students and to part-time students who pay the Health Service fee at the time of enrollment.

Provision is made for the care of sick students requiring bed care. If the care of such a student is previously approved by the Health Service, thirty days' service may be obtained. The extra expense of private rooms at the University Hospital and special nursing is charged to the student patient.

FACILITIES AND REQUIREMENTS FOR PHYSICAL EDUCATION

25. a) Facilities.—The University is provided with excellent gymnasiums, Waterman Gymnasium for men, and Barbour Gymnasium for women. The main floor of Waterman Gymnasium, which is a rectangle with truncated corners and dimensions of 246 by 90 feet, is well equipped with the various kinds of apparatus usually found in the best modern gymnasiums. A number of smaller rooms are devoted to administration, fencing, boxing, and other special purposes, while the basement is given up to baths, lockers, handball, and boxing. The main hall is lighted in the daytime by means of a large skylight 60 feet above the floor, and in the evening by electricity. A gallery makes room for an elliptical running track, ten laps to the mile, making it one of the largest gallery running tracks in the country.

Barbour Gymnasium, for women, contains, in addition to the gymnasium proper, the offices of the Dean of Women and the Director of the Gymnasium; a club room and parlors; and a hall (Sarah Caswell Angell Hall) accommodating 550 people, for lectures, meetings, theatrical entertainments, etc. The basement contains dressing rooms, shower baths, and a swimming tank which, with instruction in swimming, is open to all women registered in the University. The field house for women on Palmer Field provides bowling alleys, indoor golf school, indoor archery range, rifle range, lockers, and showers.

The Athletic Field, known as Ferry Field, comprising seventy-eight acres of land, has been set apart and equipped for outdoor sports of every kind. Several football fields and baseball diamonds, running tracks, soccer fields, indoor baseball diamonds, tennis courts, and space for numerous other games afford possibilities for complete programs of intramural and intercollegiate athletics. The University eighteen-hole golf course is located southwest of Ferry Field. In addition to the playing field there are a new football stadium seating 82,000, a baseball stand accommodating 8,000, an Athletic Administration Building, an indoor playground known as Yost Field House, and the Intramural Sports Building.
The Yost Field House provides accommodations for all kinds of athletics during the winter months when they cannot be conducted out of doors. The building is 342 feet long by 165 feet wide. It contains ample locker and shower facilities and seats 8,000 spectators in the main activities room. The activities room itself is 286 feet long by 160 feet wide and contains an eighth-of-a-mile track, a 75-yard straight-away, a basketball court, and provisions for indoor practice in football and baseball. There are also provisions for handball, indoor golf, and wrestling.

The Intramural Sports Building, similar in design and construction to Yost Field House, contains almost every conceivable facility for indoor sport and recreation. It is not planned to provide facilities for spectators, but to utilize every foot of space for athletic activity. This building forms the north side of a quadrangle which includes the Administration Building, concrete stand for track and field athletics, west tennis court unit, and Yost Field House.

The Field House and the Sports Building give a complete athletic plant that functions the year around.

b) **Required Physical Education—Men.**—All first year students in the College of Engineering are required to attend two practice periods a week in physical education. Active participation depends on the outcome of a health examination. Six hygiene lectures are also given at the beginning of the college year. Students electing military science are excused from physical education but not from the hygiene lectures.

As a result of the health examination all students are classified in the following health groups, a health card being issued for those who pass—

- **Group 1.** No Defects. Can participate in all activities.
- **Group 2.** Minor Defects. Can participate in all activities, but must report to the Health Service for a checkup on minor ailments.
- **Group 3.** Restricted and Corrective Exercise Group. Given modified exercise for correction. A part of this group is referred by the Health Service for exercise.
- **Group 4.** Reconstruction Group. No exercise until advised by the Health Service.
- **Group 5.** Excused Group. Chronic defects that allow no exercise.

A measurement and corrective chart of each student is issued at the time of the health examination. Necessary advice is given regarding proper exercises for correction.

In arranging an activities program we feel from experience that the college freshman still needs a certain amount of guidance in the way of instruction and selection, rather than deciding from his own emotional standpoint what he would like to do. Again, the requirement being for one year only, the class grouping arrangement of activities forms a concentrated means of presenting the greatest
number of the best selective activities for future use in a short space of time.

*Participation Program.* For all men in good physical condition, participation is offered in two ways—class groups and athletic groups. This method not only allows opportunity for selection but insures a continuous exercise program for all, as men in athletic groups are transferred to the classes whenever a sport is discontinued or to another athletic activity in season at the time of transfer, in which he may be interested. Transfers are made through the office of the Director of Waterman Gymnasium. From time to time men are excused from class groups for participation in intramural athletics on the days of contest.

Class Groups. These are organized during the indoor season at convenient hours. All classes take place in Waterman Gymnasium. A variable program of activities is arranged. *Drill work has disappeared entirely from the picture for college men.* Both the individual and team method of approach is used. From general observation in practice we find many students use poor body mechanics in the natural movements of the body; one out of five uses fairly good form in sprinting, one out of ten can do the high jump satisfactorily, few men have been taught the technique of popular games like basketball, handball, etc. For the greater enjoyment of these activities and others, considerable instruction is necessary in the technique and rules of all the more highly coördinated games, contests, and exercises.

Method of Class Instruction. Activities for the first semester are—track and field, boxing, wrestling, gymnastics, basketball. For the second semester—tennis, golf, handball, volley ball, badminton, basketball, gymnastics.

Each class is divided into five groups (about 25 men in each group), with a special instructor for each group. Every group remains at an activity for about three weeks. By a Round Robin method of participation every class is made familiar with all activities for the semester. This method eliminates mass drills and the monotony of mass participation, introducing the same system of instruction now being used for Varsity athletic teams.

After-Spring Recess for Class Groups. Because of favorable weather at this time, students are reclassified from an entirely selective standpoint for either outdoor or indoor activities as they prefer.

*Athletic Group.* These activities give freshmen an opportunity to participate in the Varsity type of athletics. Preliminary experience is of advantage but not necessary. Competition is limited to Varsity teams at home and telegraphic track meets with other institutions. Organized teams to which transfers are made are: football, track and field, swimming, wrestling, boxing, basketball, baseball, golf, tennis, hockey, gymnastics, and fencing.
ASSEMBLY AND MENTOR SYSTEM

Medical and Physical Defectives. (Health Group 3). Certain types of medical defectives derive considerable benefit in general body tone from modified active exercise. These are referred by the Health Service. Physical defectives considered in this group are—poor posture, flat feet, tendencies to hernia, overweight, underweight, under-development, injuries, etc. A shadowgraph is taken of all poor posture defectives. Corrective work is done during regular class hours, but under separate group supervision.

**Passing Requirements.** Passing the requirements in physical education is based on the following: Comprehensive Activities Test, Attendance, and Attitude.

Comprehensive Activities Test. At the end of each three weeks' participation in a class activity, a comprehensive test is given each student to determine his knowledge in the technique of that activity. Those who fail are required to practice for perfection.

In addition to the test a satisfactory passing record is necessary in attendance and attitude.

The passing of medical and physical defectives is determined by individual circumstances.

Health Knowledge. Six lectures are given during the first three weeks of college. The sections for instruction are made as small as possible. An examination is required to demonstrate proficiency in knowledge and otherwise conform to standards of college instruction. The Health Service is responsible for the lectures and the determination of proficiency.

Absences. All unexcused absences in physical education must be made up. All excuses should be presented to the Director of Waterman Gymnasium for approval. If for sickness it must come from the physician in charge.

Exemptions. The Admission Officer has charge of making the necessary adjustments for students entering with advanced credit.

Costume. The regulation suit required of all students is a sleeveless white gymnasium shirt, white running pants, and tennis shoes.

Lockers. Each student taking work in the gymnasium must have his own locker. Tickets are purchased at the time the regular college fee is paid or at the office of the University Cashier. The locker fee is $2.00.

Towels. Tickets can be secured at the Cashier's office. The fee is fifty cents, and it is refunded when the last towel is returned.

ASSEMBLY, MENTOR, AND PLACEMENT SYSTEM

27. a) Each engineering class has its separate assembly. The freshman class is brought together once a week, other classes about four times a year. Attendance at freshman assembly is required;
unexcused absences subject the absentee to discipline. In freshman assemblies, faculty members and visiting engineers address the students, and the regular business of the class is assured of attention by the class as a whole.

b) Closely connected with these assemblies is the Mentor System. When Orientation Period ends, the Mentor System begins; the faculty adviser continues with his group as mentor for the group. Both socially and in an advisory capacity the mentor is the personal representative of the Dean, so that each student may feel free to call on his mentor at any time with reference to any subject relating to his college life.

The students receive reports on each of their studies through their mentors or faculty advisers. These reports reach the mentor about six weeks after the beginning of the semester, and about four weeks before the final examinations; he is therefore able to give the men in his group not merely general advice but definite information as to how they are getting along in their college work.

c) During his senior year each student is requested to fill out a personnel record and file it with his professional department. The head of department, or special officer designated for the purpose, will then assist the student to find satisfactory employment after graduation by furnishing information as to available openings, and arranging contacts and interviews. From what is usually a long experience, the placement officer will advise the student as to the intrinsic merits of the opportunities presented in the special fields.

The interest of the college in placement by no means ceases when a student graduates. Graduates are invited to file a still more comprehensive personnel record. On doing this, they secure all the coöperation the placement officer can give, either as to placing a graduate in his first position, or as to enabling him to find a better position if he so desires. During the depression, college placement officers devoted a very great deal of time and effort to the business of finding work for graduates.

The University Bureau of Appointments and Occupational Information, dealing chiefly with placement of teachers, will also render service upon request.

HONOR SYSTEM

28. The students of the College of Engineering have adopted the following system: all examinations and written quizzes in the College are held under the Honor System, the object of which is to create a standard of honor which is essential to a successful engineer and a good citizen. Students are expected to uphold the system or declare their objections to it, after having been duly instructed in all its rules. The instructor does not remain in the room during an examination. The students are placed upon their honor to refrain from all forms of cheating and to reprimand a fellow student who acts suspiciously, and in case he does not take
ELECTION OF STUDIES

heed, to report him to the Honor Committee. Every student must write and sign the following at the end of his examination paper, if he does not ask for an examination under a proctor:

"I have neither received nor given aid during this examination."

The Honor Committee consists of one student elected annually from each class in the College of Engineering, each member to serve two years.

WOMEN STUDENTS

29. All undergraduate women of the University must make arrangements for their rooms, through the office of the Dean of Women, from the list of approved houses. This ruling applies to the undergraduate women enrolled in the College of Engineering. Individual adjustments can sometimes be made by securing special permission from the office of the Dean of Women.

Matters of scholarship and attendance are handled by Assistant Dean Lovell. Assistant Secretary Camilla B. Green acts as educational mentor for the women in Engineering.

RULES GOVERNING ELECTION OF STUDIES

30. a) No student shall be permitted to elect fewer than 12 hours, and no student whose grade average for the preceding semester is less than 3 shall be permitted to elect more than 18 hours a semester (exclusive of Military Science), except by permission of the classifier.

b) No credit will be allowed to a student for work in any course unless the election of the work is formally entered on his office classification card.

c) After classification, no study can be taken up or dropped without special permission of the classifier. The time for dropping any course without record is limited to six weeks from the opening of the semester. A course may be dropped only with the permission of the classifier after conference with the instructor in the course, and except under extraordinary circumstances, permission to drop courses after the first six weeks of the semester will be granted only with grade E.

d) All requests must be made out on a printed form furnished by the Secretary of the College.

e) A student is required to drop a part of his work at any time if he appears to be undertaking too much; or to take additional work if he is thought not to be sufficiently employed.

f) Only such students as are regularly enrolled in a class will be allowed to take quizzes, tests, or final examinations in the same.

g) The Faculty reserves the right to withdraw the offer of any elective study not chosen by at least six persons.

h) After matriculation, a student cannot, without special permission of the Faculty, be admitted to examination in any one of the courses given until he has received in the University the regular instruction in such course.
EXCUSES FOR ABSENCES

31. Underclassmen in the College of Engineering must take the initiative in securing from the Assistant Dean excuses for absences from classes, which excuses must be applied for within five days after their return to classes. Upperclassmen* should explain irregularities of attendance to their instructors.

Unexcused absences from Assembly during the freshman year are considered by the Discipline Committee as acts of insubordination. After two absences unexcused by the Head Freshman Mentor, the student is warned by the Discipline Committee. After two more unexcused absences, the Discipline Committee places the student upon probation for insubordination, the probationary period to last for the remainder of the freshman year. Two more unexcused absences will subject the student to the penalty of suspension in the usual manner for the remainder of the school year.

UPPERCLASSMEN

32. The Faculty recognizes as upperclassmen: a) those students in good standing, i.e., not on probation, who have obtained at least 65 hours of credit, with an average grade of at least C for all work taken at the University of Michigan; b) all new students who have completed a four-year program at approved colleges and other like institutions; and c) other new students with good previous record who in the opinion of the department heads may qualify for graduation within one year.

An upperclassman's privileges will be withdrawn should his average grade for all work at the University fall below C or should he be put on probation, and will be restored when his delinquency is removed.

Upperclassmen are not required to obtain excuses for irregularities of attendance from the Assistant Dean, but should explain them to their instructors.

EXAMINATIONS AND ENTRANCE DEFICIENCIES

33. Examinations for admission are held before the beginning of each semester. See section 13.

An applicant who fails, or is deficient, in some part of the admission requirements may, at the discretion of the Assistant Dean, be admitted, provided he passes in fifteen units; but the removal of entrance deficiencies shall take precedence of all other work; any deficiency must be removed at one of the next two regular examinations for admission, but the classifier is empowered and instructed to see that students entering this college with deficiency remove the same as far as possible during the first semester of residence.

No student who has an admission deficiency outstanding at the beginning of the second year of residence will be allowed to

* For the definition of upperclassmen see section 32.
GRADES AND SCHOLARSHIP

enter his classes until such deficiency is removed, unless for valid reason an extension of time is granted for its removal.

Examinations in college work are held at the end of each semester, but classes are liable to be examined at any time, without notice, or with one week's notice, on any portion of their work. The regular examination in any course at the end of each semester is an essential part of the work of the course.

MARKING SYSTEM

34. At the end of each semester the quality of the work of every student in each course which he elects and completes is reported by the instructor as A (excellent), B (good), C (satisfactory), D (passed), or E (not passed).

When a student is prevented by illness or by any other cause beyond his control from taking an examination or from completing any other part of a course, or if credit in a course is temporarily withheld for any reason, the mark I with a qualifying grade may be given to indicate that the course has not been completed. An incomplete course is thus reported IA, IB, IC, ID, or IE. The grade indicates the quality of work done in the part of the course which has been completed.

Any student absent from an examination is required to report to his instructor as soon thereafter as possible. If a student presents a valid excuse for his absence, he may take the examination at such time as may be arranged by the instructor. In order that credit for a course may be given it must be completed before the end of the eighth week of the semester of residence next succeeding that in which it was elected.

The final grade in a course which has been completed during the semester of residence following that in which it was elected will be based upon all of the work done in the course. It will not necessarily be the grade reported for the partially completed course.

At the time of completing a course students must obtain from the Secretary a blank form for presentation to the instructor. The blank when filled out is to be sent at once by campus mail, or delivered by the instructor, directly to the Secretary's office.

RULES GOVERNING GRADES AND SCHOLARSHIP

35. a) The average semester grade and the general average grade is computed for each student at the end of each semester and becomes part of his permanent record.

b) The average grade is determined on the basis of A equals 4, B equals 3, C equals 2, D equals 1, and E equals 0.

c) The average grade is computed by multiplying the number corresponding to the grade in each course by the hours of credit for the course and dividing the sum of these products by the total number of hours represented by all the courses considered. A supplementary grade removing an incomplete shall be used in computing averages when that grade is different from the original semester
grade qualifying the report of incomplete. It is permissible for a student to repeat a subject in order to raise his grade average.

d) No student who has earned a general average grade below 2.0 on the courses elected in this College may be graduated.

e) When the average semester or summer session grade of a student falls below 1.6 he is automatically placed on probation.

f) Students on probation must elect at least 12 hours of work a semester or 6 hours a summer session.

g) Students on probation who obtain an average semester or summer session grade of 2.0 or more are automatically removed from probation.

h) A student will be placed on the home list for any one of the following reasons:

(1) If his average semester or summer session grade falls below 1.0.

(2) If he is on probation and fails to obtain an average semester or summer session grade of 2.0.

(3) If he has been on probation during any two semesters and subsequently fails to obtain an average semester or summer session grade of 1.6.

i) In cases of extenuating circumstances, at the discretion of the Committee on Delinquent Students, students placed on probation may be removed from probation, and students placed on the home list may be continued on probation.

j) Students having an average grade of less than 3.0 may not elect extra hours; students having an average of 3.0 or more may elect extra hours, the number of extra hours which such students may elect to be determined by the classifier.

REGENTS' RULE GOVERNING OPERATION OF MOTOR VEHICLES BY STUDENTS

36. "No student in attendance at the University shall operate any motor vehicle. In exceptional and extraordinary cases at the discretion of the Dean of Students this rule may be relaxed."

WITHDRAWAL FROM THE COLLEGE

37. A student should not withdraw from class even temporarily without obtaining permission from the Assistant Dean.

Leave of absence will be granted to those who expect to return before the end of the year.

Honorable dismissal will be granted to those who wish to transfer to another College of the University and to those going elsewhere, provided in either case they are in good standing. (The written approval of parent or guardian is generally required.)

Engineering students must obtain this permission or dismissal from the Assistant Dean.
Part III

GENERAL STATEMENT

DEPARTMENTS OF INSTRUCTION

38. The broad subject of engineering has been defined as "the art and science of directing the great sources of power in nature to the use and convenience of man." It includes the discovery, conservation, and utilization of the resources of the earth, the waters, and the air. Discovery includes not only the exploration of mineral, timber, and other visible resources of the world, but also the experimental investigations of the laws controlling important phenomena and processes. Conservation includes the prevention of waste of all sorts, whether of natural resources or in manufacturing processes. Utilization includes the generation and transmission as well as the actual application of heat, light, and electricity by mechanical, electrical, and chemical means to serve useful purposes; the design and erection of structures and machines of all types, and the efficient operation of all processes, involving preparation, manufacture, transportation, or utilization of materials on a large scale. In the newer conception of engineering, efficient operation must consider not only the physical property but also the relation of the industry to the outside world, including its duty to stockholders, employees, clients, and the community in which it is situated.

Until a century ago engineering was divided into two branches, military and civil engineering. Since then civil engineering has developed in so many directions and to such an extent that new designations have come into use for its various branches.

The name "civil engineering" has been retained at the University of Michigan to designate the courses given by its Department of Civil Engineering.

The other Departments, some of which are outgrowths of civil engineering and others of different origin, are Engineering Mechanics, Geodesy and Surveying, Mechanical Engineering, Electrical Engineering, Naval Architecture and Marine Engineering, Chemical Engineering, Metallurgical Engineering, and Aeronautical Engineering, all degree-conferring departments.

The Departments of Astronomy, Mathematics, and Physics, which serve the whole University, cooperate with the College of Engineering in its programs leading to the degree of Bachelor of Science in Engineering with specialization in Astronomy, Mathematics, or Physics.

In addition to the degree-conferring departments, the College of
Engineering has departments of instruction in English, Mechanism, and Engineering Drawing, and in Metal Processing; and it uses, with the rest of the University, the Departments of Modern Languages, Chemistry, Military Science, etc., which give special courses for engineering students. Engineering students are allowed wide liberty to elect courses in history, philosophy, economics, and other nontechnical subjects without additional cost.

Besides the departments of instruction, the College of Engineering includes the Department of Engineering Research which was established by an act of the Regents in October, 1920. The purpose of this act was to establish a point of contact between the University and the technical and industrial interests in the State in the field of research. This department, because of the extensive laboratory and library facilities available at the University, in addition to its ability to call upon members of the teaching staff to direct and supervise research, is in a position to undertake and investigate a large number of problems of varied character.

Full descriptions of the various departments, their scope, facilities for instruction, and the courses offered, will be found elsewhere in this bulletin.

BUILDINGS AND OTHER EQUIPMENT

39. The work of the College of Engineering is carried on in several buildings belonging to the College, viz., the West Engineering and the East Engineering Buildings, the West Engineering Annex, and East Hall. The College also shares with the rest of the University in the use of the Library, the East and the West Physics Buildings, the Chemistry Building, the Astronomical Observatory, the Gymnasiums, etc. The summer work in surveying is carried on at Camp Davis. See section 78.

The West Engineering Building, built in 1903, is used for the Departments of Civil, Mechanical, Electrical, and Marine Engineering, Geodesy and Surveying, Mechanism and Engineering Drawing, Engineering Mechanics, and Mathematics.

The East Engineering Building, completed in 1923, houses the Chemical and Metallurgical Engineering Department, the Department of Metal Processing, the Department of Engineering Research, the Division of Transportation Engineering, the State Highway Laboratories, and the Department of Aeronautical Engineering.

The West Engineering Annex provides additional space for Mechanical Engineering (automotive engineering), Engineering Mechanics, and Geodesy and Surveying; and East Hall is used for offices and classrooms for the nontechnical subjects.

For the equipment of these buildings and Camp Davis, see later articles concerning the various departments of instruction.

The College recognizes that the benefits of instruction are far more dependent on the character of the instructors than upon any adjunct in the way of laboratory apparatus or of physical illustra-
tion, and with this in view the instructing staff has been selected from among those qualified both by technical training and practical experience; in addition, extensive use is made of the ordinary supplementary aids.

40. The Libraries.—A large, modern library building, erected at a cost of $615,000, was opened in January, 1920. This building has general and special reading rooms accommodating a thousand students at a time, and is equipped with modern appliances for the housing and serving of books.

The University Libraries contain at present about 926,000 volumes, of which many are of importance to engineers. The periodicals regularly received number 4,740.

The West Engineering Library, comprising 20,000 volumes, is housed in the West Engineering Building. The latest and best books on professional subjects are added yearly to the library, where they are accessible to all, and frequent references are made to them in the classroom as the various subjects are brought forward. The collection contains files of professional periodicals and proceedings of engineering societies.

The East Engineering Library, opened in 1924, is housed on the third floor of the East Engineering Building. It is provided with 9,000 books and over one hundred periodicals of particular interest to students in Chemical and Metallurgical Engineering, Metal Processing, and Aeronautics. A special collection of books is available to those students pursuing courses in English.

Transportation Library.—The Transportation Library contains 100,000 items dealing with every phase of transportation. It is housed in the East Engineering Building. In this library are many rare books and pamphlets relating to the origin, history, and development of our various transportation systems. It also contains very complete files of the various technical engineering associations; the modern and current periodicals dealing with railways, highways, waterways, and other engineering subjects; state and national, public utility, highway, and special commission reports; annual reports of railways and other transportation companies; proceedings of various transportation associations; and the latest books on the technical and economic phases of transportation.

The William L. Clements Library of American History, completed in 1923, the gift of Hon. William L. Clements, B.S., '82, houses the invaluable collection gathered by him and given to the University. The collection of books, manuscripts, and maps relating to the discovery of the western continent, its settlement, and later history is especially rich in rare books, pamphlets, and manuscripts dealing with our early colonial history and the period of the American Revolution. It numbers 26,300 volumes.
41. **University Power Plant.**—The University Power Plant is an example of modern power plant construction and is used for purposes of instruction as well as to furnish heat, power, and light to the University buildings. The boiler room equipment consists of ten boilers totaling 6,600 rated horsepower with all necessary auxiliaries and a complete coal and ash handling system. Coal is brought directly from the Michigan Central Railroad to the plant over an electrically operated road. The generating equipment has a total capacity of 4,350 kw. in turbo-alternator units. Tunnels are provided for the underground distribution of steam, hot water, and electrical energy. There is available alternating current at 2,300 volts, 230 volts for lighting, and other voltages for power; also direct current at 220 volts and 500 volts; high- and low-pressure steam; and hot water. The station operates in parallel with the system of the Detroit Edison Company.

42. **Visits of Inspection.**—The University is well situated for excursions to engineering industries. In Ann Arbor there is a modern, machine-switching telephone exchange. The Detroit Edison Company has four hydroelectric power stations, one at Ann Arbor and the others within a distance of four miles. These stations are of recent construction and illustrate the latest engineering practice in hydraulic and electrical design.

At Detroit there is much of interest to students of engineering, including the main power houses and substations of the Detroit Edison Company, and of the Detroit Street Railway, the electrically operated Michigan Central Railroad tunnel under the Detroit River, and the new railroad terminal.

There are within forty miles two of the most complete modern classification yards in the United States, illustrating all types of humps and other modern sorting, the New York Central freight terminals at Toledo and the Michigan Central passenger terminals at Detroit. The Detroit River tunnel and the street railway properties in both cities afford exceptional opportunities for the inspection of important work.

From the standpoint of automobile engineering, the University of Michigan has a strategic location at the very center of the automobile industry of the country. Detroit, Toledo, Flint, Jackson, Lansing, and Indianapolis, with the greatest automobile factories in the world, are within easy excursion distances and each year inspection trips are made under the direction of the automobile department.

The classes in Chemical and Metallurgical Engineering visit each year about forty industrial plants illustrating the transition from raw materials to finished products. The list includes large and modern plants illustrating the manufacture and treatment of iron and steel, copper, brass, and aluminum; Portland cement, clay products, and glass, salts, acids and alkalies, electrolytic and electric furnace products; gas, ammonia, tar, and other products from the destructive dis-
tillation of coal; petroleum; the vegetable fats and oils, including paint, varnish, and soap; sugar; food products, leather, and paper.

The students in Marine and Aeronautical Engineering have opportunities of visiting both Detroit and Toledo where various shipyards and aircraft factories are situated. The airports at the same places also afford an opportunity to inspect the various types of aircraft and port equipment both for water and air transportation.

**SOCIETIES**

43. The Engineering Council.—The Engineering Council of the University of Michigan, formed under a constitution in 1927, is an organization of students representing all departments of the College of Engineering. Its members are the presiding officers of the student branches of the American Institute of Electrical Engineers, the American Institute of Chemical Engineers, the American Society of Mechanical Engineers, and the American Society of Civil Engineers; of Tau Beta Pi, Sigma Rho Tau, Triangles, and Vulcans; of the Quarterdeck, Aero, and Transportation Clubs; the presidents of the freshman, sophomore, junior, and senior classes, together with one special representative from the sophomore class to serve for three years, and two representatives from the junior class to serve for two years; and the editor of the Michigan Technic. The Council aims to coordinate the activities of the various technical societies and clubs, to assure continuity in policy for the classes, and to develop cooperation between the student body and the Faculty.

The Michigan Technic.—The students publish monthly for eight months of the school year a magazine called the Michigan Technic, which contains articles contributed by alumni, faculty, and students on technical topics and other matters of interest in the College.

Student Branch, American Society of Civil Engineers.—This chapter was founded in 1923. At the present time its membership consists of civil engineering students from the sophomore, junior, and senior classes who are in good standing in the University. New members are elected each semester upon written application.

Mechanical Engineering Section.—This section of the general society is also a student branch of the American Society of Mechanical Engineers. Meetings of the section are held about once a month. Some of the meetings are of a purely social nature while others are addressed by members of the faculty or by outside engineers and business men on subjects of general interest to the profession.

Electrical Engineering Section.—This section is a student branch of the American Institute of Electrical Engineers. In joining it, the student makes a connection which usually extends throughout his whole professional life after graduation, and which helps him
materially by furnishing opportunities for advancement. The meet-
ings, which are held twice each month, are managed entirely by the
students, who procure speakers from among themselves or from
professionals in the field, and who derive valuable experience in self-
expression as well as technical knowledge from the discussions which
they must make for themselves. Each member of the branch receive:
*Electrical Engineering*, which is issued once each month.

**Chemical Engineering Section.**—This section is a student
branch of the American Institute of Chemical Engineers. The student
branch holds meetings where subjects of professional interest are
discussed. It has been assigned a clubroom in the East Engineering
Building.

**The Transportation Club** is an organization formed by stu-
dents with a mutual interest in the general subject of transportation.
It forms a common meeting ground for students of railroads, high-
way engineering and transport, aeronautics, marine engineering,
business administration, and economics. Because of its universal
nature, it has developed a general appeal to the student body, and
the monthly meetings are addressed by prominent engineers.

**Tau Beta Pi**, the national engineering honor society, has a
chapter in the College of Engineering. For membership in this society
good scholarship is essential.

**The National Society of Sigma Xi** has a chapter in the Uni-
versity. The aim of the society is to encourage research. High
scholarship and the promise of ability in research are required of its
candidates.

**The Stump Speakers’ Society of Sigma Rho Tau.**—This is a
branch of the intercollegiate engineering speakers’ society founded at
the University of Michigan to develop ability in public discussion and
debate. The major object of the organization is to insure a closer
bond of understanding between the applied scientist and the general
public through the development of speech activities among colleges
of architecture, engineering, and technology. The society has a pack-
age library and clipping service in its library reference room in the
West Engineering Building. It debates national engineering problems
with local societies and adjacent branches.

**Phi Eta Sigma**, a national honorary society for freshman
men, elects members each year on the basis of high scholarship.

**Phi Kappa Phi**, a national scholastic honor society, elects
its members each year from the senior classes of all Schools and
Colleges on the basis of scholarship, personality, and service to the
University.
44. About 30 fellowships and scholarships are open to students in the Graduate School. Appointment is for the term of one year, but appointees are eligible for reappointment. An appointee is not required to render any service to the University aside from that involved directly in the responsibilities of the fellowship or scholarship assigned. It is expected that appointees devote all their time to their graduate work.

A distinction is drawn between fellowships and scholarships, the former, besides carrying the larger stipend, being assigned to the students of more experience and more clearly proved ability and independence in graduate study and research.

Students should write personally to Dr. Clarence S. Yoakum, Dean of the Graduate School, for information and application forms. Applications must be made before March 1.

**University Scholarships**

A limited number of University Scholarships in the Graduate School have been established giving remission of the semester fees, but not miscellaneous fees, and are open to residents of the state of Michigan who are graduates of the University of Michigan.

**University Fellowships**

A limited number of fellowships and scholarships, ranging according to circumstances from $350 to $600, are maintained by special appropriation made annually by the Regents of the University. Properly qualified students from any college or university, or from any part of the world, may apply for appointment.

**State College Fellowships**

By action of the Board of Regents, each of the faculties of the accredited colleges of the state of Michigan is authorized to nominate annually to the administrative officers of the Graduate School some member of the graduating class or some one of their graduates of not more than four years' standing as a suitable candidate for a State College Fellowship. In each case a second nomination may also be made. All nominations should be sent to the Dean of the Graduate School not later than March 15, and accompanying each should be an official record of the candidate's undergraduate work and several letters of testimony and recommendation. The stipends will vary from $300 to $400. The State College appointees, it should be understood, will be placed on the same footing and be subject to the same regulations and enjoy the same privileges as the University Fellowship appointees.

**Lawton Fellowship in Astronomy and Mathematics.**—The stipend varies from $200 to $400. Preference is given to Astronomy if there is a suitable candidate.
Michigan Gas Association Fellowship.—This fellowship has been maintained continuously since 1900 with the exception of interruptions during the war. The holder of the fellowship receives $600.

SCHOLARSHIPS, PRIZES, AND STUDENT AIDS

45. American Bureau of Shipping Prize.—A prize of $100 is offered each year by the American Bureau of Shipping, to the student in Naval Architecture and Marine Engineering who obtains the highest average for the last two years of the curriculum, in the regularly prescribed courses.

Donovan, Cornelius, Scholarships.—These scholarships were established in 1922 by a bequest of Cornelius Donovan, C.E., '72, Eng.D.(hon.), '12, for award to meritorious senior students in engineering who are working their way through college. These scholarships are awarded in amounts of from $200 to $400 each. To be eligible, students must be American citizens, partially or entirely self-supporting, and must have completed a minimum of 45 units of work at the University of Michigan with a minimum general average of 2.5. Applications must be filed in the office of the Assistant Dean of Engineering before April 1. The awards are published in May and are paid in the amounts of half of the award when the recipients have enrolled for the first and second semesters of the following year.

Gemmell, Robert Campbell, Memorial Scholarships.—This scholarship fund in memory of her brother, Robert Campbell Gemmell, B.S.(C.E.), '84, C.E., '95, M.Eng.(hon.), '13, was founded in 1926 by Mrs. Lillian Gemmell Boal (Mrs. S. H. Boal) of Oakland, California, by a gift to the University of $10,000. It is available for freshman or sophomore students in the College of Engineering who are of general worthiness and deserving character. These scholarships are awarded in amounts of about $100 each. To be eligible, students must be American citizens, partially or entirely self-supporting, and must have completed a minimum of 15 units of work at the University of Michigan with a minimum general average of 3.0. Applications must be filed in the office of the Assistant Dean of Engineering before April 1. The awards are published in May and are paid in full in September after the recipients have enrolled for the first semester of their sophomore year.

Simon Mandlebaum Scholarships.—These scholarships were established in 1929 by the late Mary S. Mandlebaum (Mary S. Mandelle) of Detroit, Michigan, in memory of her father, Simon Mandlebaum. These scholarships are awarded in amounts of from $300 to $500 each. To be eligible students must be American citizens, partially or entirely self-supporting, and must have completed a minimum of 45 hours of work applicable for the degree. They must
have been in residence at the University of Michigan for at least one year. Applications must be filed in the office of the Assistant Dean of Engineering before April 1. The awards are published in May, and are paid in equal amounts when the recipients have enrolled for the first and second semesters respectively of the following school year.

**Frank Sheehan Scholarship in Aeronautics.**—This scholarship was founded in 1929 by Miss Mildred Sheehan as a memorial to her brother, Frank P. Sheehan, a student in the University from 1917 to 1919 and in 1924–25. The income on this gift of $20,000 is used as a scholarship or scholarships for students who intend to follow a career in aeronautics or aeronautical engineering. It is available to students who have completed at least two years’ work in the College of Engineering with a grade distinctly above the average. Usually two scholarships are available each year.

**Minnie Hubbard Smith Revolving Fund.**—This fund is dispensed as gifts to juniors and seniors in civil engineering. Applications should be made to the Head of the Department of Civil Engineering.

**LOAN FUNDS**

46. The following loan funds have been established especially for the use of engineering students who are in need of aid to complete their studies: Class of 1915 Engineering Loan Fund and Benjamin Sayre Tuthill Loan Fund, George H. Benzenberg Loan Fund and William J. Olcott Scholarship Loan Fund (not available for freshmen); Class of 1914 Engineering Loan Fund (for seniors, no interest before note matures); Class of 1917 Engineering Loan Fund and the John Frank Dodge Loan Fund (for juniors and seniors); Marian Sarah Parker Memorial Fund (for women); and J. B. and Mary H. Davis Trust Fund (Geodesy and Surveying). These special loan funds, together with a number of all-University funds which are open to students in engineering, are described in the bulletin, Scholarships, Prizes, and Loan Funds, which is available on request. Applications should be made to the Dean of Students, Room 2, University Hall.

**BEQUESTS AND OTHER GIFTS**

47. The University of Michigan has in recent years become more and more frequently the recipient of bequests and donations from public-spirited alumni and citizens of Michigan and other states who see in the state university a means of serving the present and the future. Over one-quarter of the University’s permanent assets in funds, lands, buildings, and equipment have been contributed. The University has more than one hundred and fifty permanently endowed trust funds. These funds are administered with most scrupulous and precise attention to the terms and conditions laid down by the donors. The University is always desirous to widen its field of service by receiving gifts of funds to be held in trust to provide professor-
ships, scholarships, loans, and other benefits as illustrated by the descriptions of these already existing trust funds. Correspondence on the subject of needs is solicited and will receive prompt, candid replies. Persons desiring to place property in trust permanently for the benefit of education may well remember that "The Regents of the University of Michigan" is a constitutional corporation, the highest form of body corporate known to the law.

The forms of bequest given below are not intended to take the place of the services of a competent attorney in the drafting of a will, but they may be suggestive and stimulating to the mind of a public-spirited citizen contemplating the making of a will or a gift during his or her lifetime, and they are believed to be in legal form adapted to the inclusion in a will. A form of bequest is as follows:

I give, devise, and bequeath to The Regents of the University of Michigan ........................................
(here insert the sum or the property bequeathed) ........................................
for the following purposes ........................................
(here insert the purpose of the bequest) ........................................

In the light of experience, even in so young a country as the United States of America, it is apparent that no one can unmistakably read the future. This fact has resulted in reducing to practical uselessness certain bequests, made in earlier days for purposes then important, to various of the older educational institutions of the country. With the idea of permitting most useful continuance of the benefaction in general accord with the purposes of the donor even if with the changes of the years the precise original purpose of the gift should prove to be no longer a real need, it is suggested that such a benefaction the income of which is to be devoted to a specified purpose might wisely contain a clause similar in general to the following:

In the event that, in the opinion of the said Regents, the needs to meet which this bequest is made should pass out of existence with the passage of time or not require all of the income provided, then the said Regents are hereby expressly given authority and charged with the duty to use the said income or so much of it as in their discretion may seem for the best advantage of the University, for other purposes allied to or in harmony with the spirit and purpose of this bequest as above expressed; or if such approximation of my specific purpose is in the discretion of the Regents inexpedient or impracticable then and in that event the Regents shall use the income for whatever educational or University needs they may see fit, as trustees of the University in general and of this fund in particular, since it is my purpose and intent that the income shall not lie idle and useless but shall be active and useful in contributing currently to the benefit of mankind through education.

Further, modern givers of large sums have in numerous instances taken the grounds (1) that due to changes in social and economic conditions no one can foresee the future with sufficient clearness to warrant making any bequest for specific purposes in perpetuity, and (2) that if trustees are competent and worthy to be entrusted with
investment of the principal and use of the income, they are competent to use the principal in the light of future social and economic conditions. Should a testator desire to give such discretion to the Regents at the end of a period of years he could do so by use of the following or a similar clause:

If after this bequest shall have been in operation for..........years or more the Regents within their discretion as trustees shall believe that my general purpose in making this bequest, namely, the benefit of mankind through education, would be better served by the expenditure of both principal and income than by the continued expenditure of the income only, then and in that event the said Regents are expressly authorized and empowered to sell the securities or other property in which such principal shall then be invested, or to sell any part thereof, and to expend the proceeds thereof as may in their opinion at that time be as near as feasible to the purposes herein above specified for the best advantage of the University of Michigan in any phase of its then accepted and proper activities.

DEGREES CONFERRED IN THE COLLEGE OF ENGINEERING

48. The University of Michigan confers on all graduates of the College of Engineering the degree of Bachelor of Science in Engineering, the diploma designating the branch of engineering that the student has pursued.

DEGREES CONFERRED IN THE GRADUATE SCHOOL

49. Graduate courses are offered in the Graduate School leading to the degrees of Master of Science in Engineering, Doctor of Philosophy, Doctor of Science, Civil Engineer, Mechanical Engineer, Electrical Engineer, Chemical Engineer, Metallurgical Engineer, Naval Architect, Marine Engineer, Aeronautical Engineer, and Geodetic Engineer.

All students who have received a bachelor's degree from the College of Engineering of this University or from some other university or technical school of recognized standing may enroll in the Graduate School for the degree of Master of Science in Engineering and for other higher degrees. See the Announcement of the Graduate School, which may be had on application.

Students enrolled in the Graduate School must have a subject of specialization but studies may not be selected exclusively in the single department concerned with the subject. Cognate subjects should be selected in other departments. While it is expected that at least half of the work will be in a single department and also that the work will have unity, narrow specialization is discouraged. After a student has selected his department of specialization he should confer with the professors under whom he expects to study and with them arrange the details of his course.
REQUIREMENTS FOR GRADUATION

50. To secure a degree in the College of Engineering, a student must meet the following requirements:

a) He must complete the required courses of his department.

b) He must complete a sufficient number of electives approved by the head of his department to make a total of 140 credit hours with an average grade of 2 or above. See section 35.

A credit hour represents as a rule 1 hour of recitation or lecture a week for one semester, preparation for which should require 2 hours of study; or in the case of laboratory work, the credit hours are one-half to one-third of the actual hours spent in session, the time required depending on the necessary home work.

c) He must complete 30 credit hours of the 140 credit hours required, or have one year of residence, at the University of Michigan. Attendance at four summer sessions will be accepted as the equivalent of one year in satisfying the present resident requirement.

d) He must obtain a total of 148 credit hours to receive degrees in two departments, and he must complete the requirements for both degrees.

NONTECHNICAL ELECTIVES

51. All regular students in the College of Engineering are required to complete not fewer than 6 hours of nontechnical electives selected from the following list:

Anthropology
Archaeology
*Astronomy
*Botany
*English
Fine Arts
†Foreign Language
*Geography
*Geology
*History

*Military Science and Tactics (not to exceed 4 hours)
Mineralogy
Music (courses listed in Literary Announcement)
Philosophy
*Political Science
Psychology
Sociology
Speech
*Zoology

Credit is withheld in the following groups until the completion of the second course (see Announcement of the College of Literature, Science, and the Arts):

Greek 1 and 2 ..................8 hours
Latin 1 and 2 ..................8 hours
French 1 and 2 ..................8 hours
Spanish 1 and 2 ................8 hours
German 1 and 2 ................8 hours
Geography 1 and 2 ..............8 hours

* Starred courses may be elected in the freshman year.
† Students who elect the beginning course in a language must continue with the second course.
Plane trigonometry and Chemistry 3 will be included in the list of nontechnical electives when college credit is given in these studies.

Students in aeronautical engineering are advised to elect German; and students in astronomy, mathematics, and physics are advised to elect both French and German. Students who expect to do graduate work in chemical engineering are urged to acquire a reading knowledge of German.
52. There is a common first year for all students entering without deficiencies or advanced credits. After the first year, each student indicates the branch of engineering he expects to follow and is then registered as a student in that branch.

In the second year there is some variation among the curricula for the different branches of engineering, though not so great as to make transfers difficult; but in the third and fourth years there are marked differences, and a student transferring from one department to another does so with difficulty and with some loss of time.

The schedule of studies for first-year students is as follows:

<table>
<thead>
<tr>
<th>FIRST SEMESTER</th>
<th>HOURS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math. 3 (Alg. and Anal. Geom.)</td>
<td>4</td>
</tr>
<tr>
<td>*English 1</td>
<td>3</td>
</tr>
<tr>
<td>*English 2</td>
<td>1</td>
</tr>
<tr>
<td>Drawing 1</td>
<td>3</td>
</tr>
<tr>
<td>†Chem. 5E or Chem. Eng. 1 and Metal Proc. 2</td>
<td>5</td>
</tr>
<tr>
<td>Assembly</td>
<td>0</td>
</tr>
<tr>
<td>Physical Ed. or Mil. Science</td>
<td>0 or 1</td>
</tr>
</tbody>
</table>

15, 16, or 17

<table>
<thead>
<tr>
<th>SECOND SEMESTER</th>
<th>HOURS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Math. 4 (Pl. and Sol. Anal. Geom.)</td>
<td>4</td>
</tr>
<tr>
<td>*English 3</td>
<td>2</td>
</tr>
<tr>
<td>*English (Group II)</td>
<td>2</td>
</tr>
<tr>
<td>Drawing 2</td>
<td>3</td>
</tr>
<tr>
<td>†Chem. Eng. 1 and Metal Proc. 2 or Chem. 5E</td>
<td>5</td>
</tr>
<tr>
<td>Assembly</td>
<td>0</td>
</tr>
<tr>
<td>Physical Ed. or Mil. Science</td>
<td>0 or 1</td>
</tr>
</tbody>
</table>

16 or 17

Physical education twice a week throughout the year (without credit in hours) is required of all first-year students, unless military science (one hour credit each semester) is elected as a substitute. Enrollment in military science is for a period of four semesters.

Schedules of studies for later years will be found under the work of the various degree-conferring departments.

The above schedule assumes that the student has presented for admission the full requirement in algebra and geometry, and also trigonometry and chemistry as described in section 10. Should the student have entered without trigonometry or chemistry, or both,

* If modern language is elected, it may be classified here and the English postponed. See section 51.
† See note section 56.
the schedule will be modified by substituting Mathematics 7 for Mathematics 3 and (or) Chemistry 3, first semester, followed by Chemistry 6, second semester, in place of Chemistry 5E.

In case the admission requirements have been fully met on entrance, the above trigonometry and Chemistry 3 taken in college will give credit toward graduation as nontechnical subjects. See section 51.

The classifier in consultation with the student will arrange a schedule intended to adjust the irregularities as quickly as possible. Students are required to remove all deficiencies during this first year, unless granted an extension of time for their removal. See section 33.

NONPROFESSIONAL COURSES

53. In the following sections are listed courses given entirely, or primarily, for students in engineering, and in addition those courses which frequently are elected by them. For other courses see the Announcements of the College of Literature, Science, and the Arts, the School of Business Administration, and others.

A course in another college that is listed in any engineering curriculum may be elected by our students without special formality; but the approval of the deans, readily obtained, may be required when the course is not intended for engineers. Lack of proper preparation for the course is sufficient reason for approval to be refused.

Besides the departments listed below, in which our students make frequent elections, there are many others which freely and hospitably receive our students. The College of Engineering in the same way receives students from other colleges of the University.

54. BACTERIOLOGY AND WATER ANALYSIS

Professor Soule, Assistant Professor Emerson, and Mr. Klimek.

105. Water Analysis. This course is open to students of sanitary engineering and to others who are qualified. Tu and Th afternoons, first half of the first semester. 1552 East Medical Building. Two hours credit.

105a. Special Problems in Water Analysis. Hours and credit to be arranged. Each semester.

111E. Practical Bacteriology. This course is open only to students of sanitary engineering. Three afternoons each week during the second half of the first semester, beginning in November. 2552 East Medical Building. Two hours credit.

55. BUSINESS ADMINISTRATION

Professors Griffin, Jamison, and Blackett; Associate Professors Riegel, Taggart, and Wolaver; Assistant Professors Phelps and Waterman, and others.
The courses listed below are those which are deemed of special interest to engineering students. For the full list of courses in Business Administration, see the Announcement of the School.

COURSES IN BUSINESS ADMINISTRATION

101. Industrial Management. The purpose of this course is primarily to present the fundamental principles of business organization and management, as illustrated in the management of factories. The course stresses managerial control of labor, materials, and productive processes through the medium of modern, scientific methods. A textbook and collateral readings are used, as well as a liberal assortment of business cases to illustrate the principles involved. Prerequisite: principles of economics. Three hours credit. First semester.

102. Industrial Relations. This course deals with the problems of human relations in business and industry. Reasons for the present emphasis on personnel relations are first considered. The course, however, is chiefly concerned with methods of selection, training, and maintenance of personnel in business and industrial organizations. Devices used in selection and training are appraised. Systems of wage payment and methods for keeping a continuous inventory of employees are analyzed. As far as possible the "case method" is used. Three hours credit. Second semester.

113. Cost Accounting I. The subject matter of this course is confined to industrial cost accounting. Both job order and process systems are considered at length. Particular attention is given to the methods of allocating indirect expense to departments, processes, jobs, and classes of product. The principles of costing are illustrated in a complete cost set which the student is required to work out as a laboratory exercise. In addition, numerous shorter problems are assigned. Prerequisites: Econ. 171 and 172. Three hours credit. First semester.

121. Business Statistics I. This course introduces the student to the use of frequency distribution, index numbers, time series, and correlation, in the solution of business problems. Illustrations and problems are drawn from actual business records. Three hours credit. First semester.

151. Marketing Principles I. This course, together with Course 152, has a twofold aim: to introduce all students of business to the leading principles and business problems involved in the transferring of goods from producers to consumers, and to provide a basis for the more intensive study of the special phases of marketing for those students who elect to devote themselves especially to this aspect of business. Course 151 includes a consideration of the following subjects: (1) the general principles of marketing; (2) the marketing of agricultural products, including grading, the use of
central markets, speculation, and the organized commodity exchanges; (3) manufacturers' buying problems; (4) manufacturers' selling problems, such as the choice of channels of distribution and of methods of sale, and the functions of middlemen of the wholesale and retail markets. The course is conducted by the study of concrete business problems and supplementary readings. **Prerequisite:** principles of economics. Three hours credit. First semester.

152. **Marketing Principles II.** This course is a continuation of Course 151 and has the same general aims. It specifically considers the following subjects: (1) the functions of advertising and its place in a general distribution plan; (2) price policies; (3) standardization of products; (4) retailing; (5) the State and marketing, including a discussion of "unfair competition." The method of instruction is the same as that in Course 151. **Prerequisite:** Bus. Ad. 151. Three hours credit. Second semester.

161. **Financial Principles I.** This course undertakes an analysis of the financial principles underlying the promotion, organization, and management of business enterprises. A thorough study is made of the characteristics of the several types of securities with particular attention to their use in the original financing of concerns in various lines of industry. Methods of obtaining and managing working capital, as distinguished from problems of permanent capital, are considered, with special emphasis on such matters of current financial management as temporary borrowing, and the financial aspects of the purchase, production, and sale of goods. **Prerequisites:** Econ. 171 and 172 or equivalent. Three hours credit. First semester.

162. **Financial Principles II.** This course is a continuation of Course 161 and proceeds with a study of the financial problems of going concerns. Problems of administration of income receive specific attention, and an attempt is made to show the relationship of accounting to finance in this important phase of administration. The problems of expansion are next considered, raising the questions of the profitableness of expansion and means of financing such moves. Finally, this course undertakes a study of the problems involved in the financial reorganizations of businesses and an examination of procedures used in refinancing and reorganizing unprofitable or bankrupt concerns. **Prerequisite:** Bus. Ad. 161. Three hours credit. Second semester.

202. **Business Conditions.** This course endeavors to acquaint the student with the nature and limitations of business forecasting and with the statistical material used to measure the general conditions of business. The theory and history of business cycles is considered and the work of the leading commercial forecasting services appraised. Particular emphasis is placed on the study of trends in
particular industries. A course report is required of each student covering the history, current position, and future of a particular trade or industry. Familiarity with the technique of statistical analysis is presupposed. Two hours credit. Second semester.

205. Business Law I. It is the purpose of this course to give a general survey of the fundamental principles of the law governing business transactions. The course will consider the main principles of contract; offer; acceptance, consideration, capacity of the parties; legality of object; the formal requisites of agreements under the statute of frauds; the operation of contracts in business, and their interpretation by the courts; breach of contract and damage. The law of business organization, and the nature and formation of relations in agency, partnership, and corporations will also be considered. Although this course is designed for second-year students, by special permission it may be elected by first-year students in the School, and by students of senior standing in other divisions of the University. Three hours credit. First semester.

206. Business Law II. This course is devoted to specialized problems in credit; modes of safeguarding credit; negotiable instruments; guaranty and suretyship; mortgages; pledges; sales and conditional sales; problems in bankruptcy and insolvency; and receiverships. Students will be given topics for reports and discussion. This course should be of special interest to students specializing in accounting, finance, and banking. Three hours credit. Second semester.

280. Public Utility Accounting. This course consists of an intensive comparative study of the standard systems of accounts prescribed for various utilities by the Interstate Commerce Commission and the state commissions. Some attention will be given the matter of consolidated income and financial statements in the utility field. Two hours credit. Second semester.

284. Public Utility Finance. This course is designed primarily to acquaint students with the financial problems and techniques peculiar to the utility industry. The teaching method involves observation of financial operations being carried on at the time the course is conducted and a comparison of such financing with that of the near and more distant past. Occasion is taken to analyze security issues and their purposes, administration policies, and reorganization methods. Considerable attention is paid to the public utility holding company and its legal, financial, and economic position in the industry. Prerequisites: Bus. Ad. 161 and 162. Two hours credit.

Summer Session

Courses 102s, 151s, 152s, 161s, 162s, and 205s, or similar courses, will be given during the Summer Session.
The aims of the fundamental course in general chemistry, required of all engineering students, are primarily the development of a scientific attitude, the acquisition of such chemical facts as form a part of the store of knowledge of any well-informed person, and preparation for the succeeding required course in the chemistry of engineering materials. Further courses in analytical, organic, and physical chemistry are required of students in chemical engineering.

The chemistry building provides excellent facilities for the work in all the schools and colleges of the University. Lecture and classrooms, laboratories for class instruction and individual research, a fully equipped stock room, and the chemical library are all located in the one building. The library contains about 10,000 volumes and is especially rich in complete sets of journals; 120 journals are currently received.

COURSES IN CHEMISTRY

3, 6. General and Inorganic Chemistry.* A study of the descriptive chemistry of the nonmetallic elements (Course 3) and of the metallic elements (Course 6), with special emphasis upon the interpretation of chemical phenomena from the viewpoint of modern theory. Two lectures, two recitations, and two two-hour laboratory periods. Chem. 3 is a prerequisite for Chem. 6. Four hours credit each. Chem. 3 is given each semester; Chem. 6, second semester only.

5E. General and Inorganic Chemistry.* The fundamental principles of chemistry are developed in such a way as to illustrate the scientific method. The descriptive chemistry of some of the nonmetallic elements and of all the more important metallic elements is studied, special emphasis being placed on such facts as are of importance to the engineer. Two lectures, two recitations, and two three-hour laboratory periods. Open to students who have presented a unit of chemistry for entrance. An examination may be given to students enrolling in this course, and those whose preparation is shown to be inadequate will be transferred to Course 3, credit for which will be counted as a nontechnical elective. Five hours credit. Each semester.

15E. Qualitative Analysis. In this course the distinctive properties of some of the more common chemical compounds are

* Engineering students entering without chemistry will elect Chem. 3 and 6. The credit for Chem. 3 will be allowed as a nontechnical elective if the student presents full entrance requirements, but otherwise will be entered as an admission requirement. Students presenting an approved unit of chemistry for entrance will take Chem. 5E, unless they are advised to elect Chem. 3 and 6. College credit for Chem. 3 will be allowed as a nontechnical elective for students presenting an entrance unit of chemistry.
studied, with special reference to their use in analysis. A considerable number of unknowns are analyzed, and the student is required to show an understanding of the theory of dilute solutions in discussing the reactions employed in the laboratory. Two recitations and two four-hour laboratory periods. **Prerequisite:** Chem. 5E or 6 or equivalent. Four hours credit. Each semester.

43. **Physico-Chemical Measurements.** Methods for the determination of molecular weight, viscosity, surface tension, reaction rate, solubility, etc., optical measurements with polarimeter, refractometer, spectrometer. Laboratory work. *Must be preceded or accompanied by Chem. 45 and 57.* Two to four hours credit. Each semester.

45. **Elementary Theoretical and Physical Chemistry.** The fundamentals of physical chemistry are developed with particular emphasis on the solution of problems. The subjects treated include the gaseous, liquid, and solid states, solutions and thermochemistry. Three lectures or recitations. **Prerequisites:** Chem. 15E or equivalent, Phys. 46, and a knowledge of calculus. Three hours credit. Each semester.

47. **Elementary Theoretical and Physical Chemistry.** This course is a continuation of Course 45. Special emphasis will be placed on the subjects of chemical equilibrium and chemical kinetics. Three lectures or recitations. **Prerequisite:** Chem. 45 or its equivalent. Three hours credit. Each semester.

57. **Quantitative Analysis.** This course includes the study of gravimetric, volumetric, and electrolytic methods, and the analysis of simple mixtures. The solution of stoichiometric problems is emphasized. Two recitations and three four-hour laboratory periods. **Prerequisite:** Chem. 15E. Five hours credit. Each semester.

63. **Organic Chemistry.** This course is intended for students who desire a more elementary course than Chem. 67E and 69E. Four lectures or recitations. **Prerequisites:** Chem. 3 and 6, or Chem. 15E. Four hours credit. Each semester.

67E. **Organic Chemistry.** The properties and classification of carbon compounds. Lectures and recitations. **Prerequisite:** Chem. 15E. Three hours credit. Each semester.

69E. **Organic Chemistry.** A continuation of Course 67E. Lectures, recitation, and laboratory. **Prerequisites:** Chem. 15E and 67E. Five hours credit. Each semester.

105. **History of Chemistry and Development of Chemical Theory.** Lectures and seminar. Two hours credit. Each semester.
111. Electrochemistry. An elementary treatment of the fundamentals of the subject. Two lectures. Must be preceded by Chem. 47. Two hours credit. First semester.

125. Colloid Chemistry. In this course the student will be given the fundamental principles of colloid chemistry. Two lectures. Open only to those obtaining permission of the instructor. Two hours credit. First semester.

127. Colloid Chemistry Laboratory. An application in the laboratory of the principles of colloid chemistry. Laboratory work. Must be preceded or accompanied by Chem. 125. Two hours credit. First semester.

131. Physico-Chemical Measurements. A continuation of Course 43. The work includes electrical measurements such as conductivity, transport numbers, and electromotive force, work with the hydrogen electrode, experiments with colloids, and the determination of some of the more important physico-chemical constants. One to four hours credit. Each semester.

145. Advanced Quantitative Analysis. Application is made of the principles laid down in Course 57 to the analysis of some technical products, including coal, iron, and other ores, a silicate rock, and ferrous and nonferrous alloys. Lectures and quiz, twice a week; laboratory, two or three periods a week. Prerequisites: Chem. 57 and Phys. 36. Four or five hours credit. Each semester.

163. Advanced Organic Chemistry and Ultimate Analysis. Laboratory work and reading. Prerequisite: Chem. 69E. Two to five hours credit. Each semester.

165. Advanced Organic Chemistry. Two lectures, and reading. Prerequisite: Chem. 69E. Two hours credit. First semester.

166. Advanced Organic Chemistry. Two lectures, and reading. Prerequisite: Chem. 69E. Two hours credit. Second semester.

Summer Session

Courses 3, 6, 15E, 43, 57, 63, 69, 125, 127, 131, 145, 163, and 242, as described for the regular session, or similar courses, will be given in the Summer Session.

57. ECONOMICS

Professors SHARFFMAN, PATON, WATKINS, and ELLIOTT; Associate Professor PETERSON; Assistant Professors BRIGGS and FORD; Mr. LAING, Mr. HORNER, Mr. BOWERS, Mr. MEAD, and Mr. STAPP.

Courses 53 and 54 are introductory courses designed especially
for students in the College of Engineering and are prerequisites to the election by engineering students of the more advanced courses in the Department of Economics listed below. However, upperclassmen may take Courses 171 and 173 without having had Courses 53 and 54. For further details with respect to these courses and for additional courses in the field of economics, consult the Announcement of the College of Literature, Science, and the Arts.

*Students who elect any course without first completing the necessary prerequisites will be denied credit in that course.*

**COURSES IN ECONOMICS**

53, 54. *General Economics.* For students of the College of Engineering and other professional schools or colleges. These courses offer a general survey of economic principles and problems with primary emphasis on the latter during the second semester. Students successfully completing these courses will be admitted to advanced study in economics. Three hours credit each. First semester, Course 53; second semester, Course 54.

101, 102. *Money and Credit.* This course undertakes a study of the functions of money and credit in our economic system. Commercial banking and the Federal Reserve System, credit control, the foreign exchanges, monetary standards, inflation and monetary and banking reform are among other topics studied. Prerequisites: Econ. 53 and 54. Econ. 101 is a prerequisite to Econ. 102. Three hours credit each. First semester, Course 101; second semester, Course 102.

[104. *Elements of Money and Credit.* This course, a condensation of Courses 101 and 102, is primarily designed for seniors, graduate students, and others in their last semester of residence, and for students in other departments who can afford to give only one semester to the field. Prerequisites: Econ. 53 and 54. Three hours credit. Second semester. Omitted in 1936-37.]

121. *Labor I.* This course is intended as an approach to the understanding of the problems of the workers and of the problem of labor efficiency. Subjects considered include wages, insecurity, strikes, and the growth of the labor movement. Possible remedies by employers, unions, and the government are briefly examined. Discussion and lectures. Prerequisites: Econ. 53 and 54. Three hours credit. First semester.

122. *Labor II.* This course will consider employers, unions, and the government as possible agents in attempting to meet the problems raised in the preceding course. Subjects considered include personnel management, employee representation, trade unions, social insurance, and protective legislation. Prerequisites: Econ. 121, or permission of instructor. Three hours credit. Second semester.
130. Economics of Transportation. An analysis of the basic relations of transportation to economic organization and of the leading economic features of rail, water, road, and air transport. Prerequisites: Econ. 53 and 54. Three hours credit. First semester. Omitted in 1936–37.

131. Corporations and Combinations. Concerned, first, with the corporation and its public significance; and, second, with monopolistic organizations and competitive practices, and with public policy respecting them. Prerequisites: Econ. 53 and 54. Three hours credit. Second semester.

133. Railroad Regulation. This course deals with the nature and problems of the railroad industry from the standpoint of government regulation. Prerequisites: Econ. 53 and 54. Three hours credit. First semester.

134. Public Utility Regulation. This course deals with the nature and problems of the so-called public utilities from the standpoint of government regulation. Prerequisites: Econ. 53 and 54. Three hours credit. Second semester.

171. Principles of Accounting I. This course consists primarily of a study of business transactions and operations in terms of the fundamental devices of accounting. Special attention is given to periodic operations, including the construction of work sheets and financial statements, and to the classification of accounts for managerial and other purposes. Three hours credit. Each semester.

172. Principles of Accounting II. This course, a continuation of Course 171, includes a study of the principal forms of income statements and reports of financial position, a survey of the problems of valuation and income determination, and a consideration of the special features of partnership and corporation accounting. Three hours credit. Each semester.

173. Elements of Accounting. A survey course in which, in addition to covering the underlying features of accounting technique, considerable attention is devoted to the interpretation of financial reports. Three hours credit. Each semester.

175. Elementary Economic Statistics. This course is intended to give critical knowledge of the chief sources of economic statistics, and a familiarity with the more common methods of analysis and presentation. The work will consist chiefly of sample economic problems in the use of graphic presentation, averages, measurements of seasonal variation and trend, index numbers, representative sampling, estimation, and the preparation of questionnaires. Prerequisites:
Econ. 53 and 54. Six hours a week of laboratory (or four laboratory and a one-hour lecture in some weeks). Three hours credit. Each semester.

181. Public Finance. A general survey of public expenditures, the character of taxation, the tax system of the United States, and the effects of public indebtedness. Prerequisites: Econ. 53 and 54. Three hours credit. First semester;

Summer Session
Courses 51s, 52s, 101s-102s, 121s, 135s, 153s, 164, 171s-172s, 181s, 252s, and 256, or similar courses, are generally offered in the Summer Session.

58. EDUCATION

ENGINEERING—TEACHER'S CERTIFICATE
At the 1935 session of the Michigan Legislature a law was passed that places the power to fix the requirements for teacher's certificates in the hands of the State Board of Education. Under the new plan the faculty of the School of Education of the University will recommend candidates for the Teacher's Certificate to the State Board of Education rather than to the Board of Regents of the University as formerly. As the policies governing such recommendations were not completed at the time of the publication of this announcement, students in the College of Engineering are advised to consult the Supplementary Announcement of the School of Education, or to confer with the Secretary of the School of Education relative to the specific details of the requirements for a teacher's certificate.

59. ENGLISH

Professors Nelson and ———; Associate Professors Thornton, Weng er, Dahlstrom, and Burklund; Assistant Professors Brackett, Egly, and Walton; Mr. Kirschbaum, Mr. Mack, Mr. Tenney.

The work in English aims to prepare the student to speak and to write effectively, and to give him a genuine and intelligent interest in reading as a means of enlarging his fund of ideas and enriching his background. He is therefore afforded throughout his four years a liberal choice of courses in composition, both written and oral, and courses in the appreciation and critical reading of literature.

General Requirements.—All students in the College of Engineering are required to take ten hours of English. Regularly, they will take English 1 and 2 in their first semester, and in their second semester English 3 with one of the two-hour courses listed in Group II. In addition to this they must take, in their junior or senior years, a two-hour course chosen from Group III. Students in civil engineering must take English 6 for their upperclass requirement.
Special Requirement for Foreign Students.—All foreign students must take English 1a and 2a until they have demonstrated their ability to do the regular freshman work in English 1 and 2. In addition to the general requirement of ten hours, foreign students will, at the discretion of the Committee on English for Foreign Students, be required to continue their work in English until, in the judgment of the English faculty, they have a satisfactory working knowledge of English. The maximum total assignment in English for such students is seventeen hours. For further regulations regarding foreign students, see section 9.

Grouping of Courses.—Groups I and II include courses which satisfy the freshman requirement and the special courses for foreign students. Group II offers also nontechnical electives in public speaking, composition, and contemporary literature to all students who have satisfied the freshman requirement. Group III offers courses to satisfy the upperclass requirement. Junior, senior, and graduate students may also take courses in this group as nontechnical electives.

Library Facilities.—In addition to the facilities of the General Library and of the various departmental libraries, the English Department has accumulated a special collection of approximately one thousand volumes, which is at present located in the Chemical Engineering Library on the third floor of the East Engineering Building.

COURSES IN ENGLISH

GROUP I

English 1, 2, and 3 are required of all engineering students; English 1 and 2 should be taken in a student's first semester; English 3 in his second semester.

1. Theme-Writing. An introductory course in composition and the appreciative study of literature. Prepared themes; frequent impromptus; readings in essays, prose fiction, drama, and poetry. This course is a prerequisite for all courses in English except English 2. Three hours credit. Each semester.

1a. Theme-Writing for Foreign Students. A special course in writing and reading which all foreign students must take until they have demonstrated their ability to take Course 1. Courses 1a and 2a are to be taken at the same time. Five hours of class work, two hours of credit for the two courses. Each semester.

2. Oral Exposition. A practice course in public speaking which must be taken with Course 1. Written outlines, extempore and impromptu speaking, informal debates, and other oral exercises. Each student presents about ten five-minute speeches during the semester. Two hours of class work. One hour credit. Each semester.
2a. Oral Exposition for Foreign Students. A special course in speech which all foreign students must take until they have been judged ready to take Course 2. Practice in conversation and in reading aloud; short expository speeches; dictation; correction of individual speech defects; drill on pronunciation. Each semester.

3. Expository Writing. A continuation of English 1 with special emphasis on exposition. Prerequisites: English 1 and 2. Every freshman, in his second semester, must choose, in addition to English 3, one of the courses listed in Group II. Two hours credit. Second semester.

GROUP II

One of these courses must be elected to complete the freshman requirement; the others give credit as nontechnical electives. Except for Courses 4 and 5, in which the work is of a specialized nature, three to five papers, besides impromptus, are required. Prerequisites: English 1 and 2.

4. Public Speaking for Engineers. A study of the problems of organization, illustration, and effective presentation in public address, affording frequent opportunity for practice and class criticism. Two hours credit. Each semester.

5. The Scientific and Technical Lecture. The preparation and delivery of lectures on scientific subjects intended for scientific societies or for popular assemblies; presentation of technical reports and demonstration methods. Two hours credit. Second semester.

8. Advanced Composition. A course devoted exclusively to writing for those students who desire additional practice in the various forms of composition. Two hours credit. Each semester.

21. Contemporary Drama. A study of modern drama from the time of Ibsen to the present day. Two hours credit. Each semester.

22. Contemporary Novel. Reading and discussion of outstanding European and American novels from about 1890 to the present. Two hours credit. Each semester.

23. The Short Story. Reading and analysis of a large number of short stories. Two hours credit. Each semester.
GROUP III

These courses, which are open to juniors, seniors, and graduates only, may be taken to satisfy the junior-senior requirement in English and may also be taken as nontechnical electives. Students in Civil Engineering must take Course 6. Courses marked with an asterisk (*) may be taken for graduate credit provided that additional work be satisfactorily done. Except for English 6, there is a requirement of four to six prepared papers besides impromptus. Prerequisites: English 1, 2, and 3, and one course in Group II.

*6. Report-Writing. The engineering report as a special type of exposition to which are applicable the fundamental principles of general exposition. Lectures, conferences, daily exercises, and two major assignments correlated as closely as possible with the technical work of the student. Open to seniors and graduates only. Two hours credit. Each semester.

6a. Seminar in Thesis Problems. For graduates who are preparing their theses. To be taken without credit.

7. Argumentation and Debate. Study of problems most commonly met by engineers in furthering their projects; emphasis on clear, logical thinking and convincing argument; frequent opportunity for extemporaneous presentation of material. Two hours credit. Each semester.

*25. The Drama. An appreciative study of significant dramas in classical and western civilizations. Two hours credit. Each semester.

*26. The Novel. Reading and discussion of major works in the prose fiction of the eighteenth and nineteenth centuries. Two hours credit. Each semester.

*27. The Literature of Science. Review of the work of the great historic figures in the scientific field: ancient, modern, and contemporary. Two hours credit. Each semester.

*29. Literary Masterpieces. Studies in the works of exceptional merit in the various literary forms. Two hours credit. Each semester.
30. **Shakespeare.** A study of eight of the principal plays. Two hours credit. Each semester.

**Summer Session**

Courses 1, 2, 6, and 23, or similar courses, will be given during the Summer Session.

60. **FINE ARTS**

For full information about the courses in Fine Arts, see the Announcement of the College of Literature, Science, and the Arts.

61. **FORESTRY AND CONSERVATION**

Professors Dana, Matthews, Allen, Graham, Ramsdell, and Young; Associate Professors Kynoch, Craig, and Baxter; Assistant Professors Wight and O'Roke.

All forestry courses are given in the Natural Science Building and in the Utilization Laboratory.

**COURSES IN FORESTRY**

2. **The Profession of Forestry.** A general survey of the various branches of forestry; character of the work; professional opportunities. One hour credit. Second semester.

31. **Introduction to Forestry.** Economic and social importance of forestry; history of forestry in the United States and abroad; character, distribution, and utilization of our timber resources; factors influencing tree growth; how the forest is reproduced and cared for; influence of forests on climate, stream flow, and erosion; forestry as a profession. Three hours credit. Each semester.

101. **Dendrology.** Classification, identification, and characteristics of the more important forest trees of the United States; development and growth of the individual tree; usual occurrence of different species and their share in the formation of forest types. **Prerequisite:** systematic botany. Three hours credit. First semester.

122. **Forest Improvements.** Improvements for which provision should be made in ordinary forest management; the priority of their construction; estimates of cost; principles of labor management; cost-keeping systems for forest projects. Three hours credit. First semester.

128. **Pathology of Wood.** Recognition of the important agents which cause decay and stain in wood, with special studies of their growth requirements. Consideration is given to different methods of control, with laboratory practice in determining the toxicity of various preservatives. Three or four hours credit. Second semester.

131. **Wood-Products Insects.** Characteristics, life histories, type of injury, and control of insects injurious to wood products.
Prerequisite: Zoology 1. Not open to students who have had or expect to take Forestry 130. Three hours credit. First semester.

154. Logging and Wood Utilization. Methods and costs of logging under different forest conditions and different silvicultural treatment; layout of logging operations; methods and costs of lumber manufacture; brief survey of other major wood products. Prerequisite: surveying. Four hours credit. Second semester.

159. Wood-using Industries. Wood-using industries of the United States; location and economic importance; kind, amount, and source of wood used by representative industries; methods and costs of manufacture; seasoning, preservation, marketing, and utilization of product. Two hours credit. First semester.

164. Structure and Identification of Woods. Structure of North American woods with particular attention to features used in identifying the commercial timbers. Prerequisite: Forestry 101. Two hours credit. Second semester.

165. Conditioning and Preservative Treatment of Woods. Air seasoning, kiln drying, and preservative treatment of woods. The laboratory work includes operation of a semi-commercial kiln and wood-preserving plant. Prerequisite: Forestry 163 or 164. Four hours credit. First semester.

166. Timber Mechanics. Study of the mechanical properties of woods and of the methods used in obtaining data on these properties; practical application of strength data. The laboratory work includes standard strength tests on native woods in a well-equipped timber-testing laboratory. Prerequisite: Forestry 163 or 164. Two hours credit. Second semester.

168. Chemical Utilization of Woods. Utilization of woods for the making of pulp and paper, artificial silk, and other cellulose products, and for distillation and miscellaneous products. Prerequisites: Forestry 163 or 164 and Chemistry 5 or 6. Three hours credit. Second semester.

170. Principles of Lumber Grading. Detailed discussion of American Lumber Standards; relation of these standards to the various lumber associations, the retailer, and the ultimate consumer; and their use in specifications. Actual practice in lumber grading and identification. Two or three hours credit. Second semester.
172. **Plywood and Laminated Construction.** Sources, characteristics, properties, preparation, and testing of adhesives used in ply and laminated construction; structural and physical properties of woods in relation to adhesive work; preparation, assembly, and bonding of wood plies; drying and conditioning of ply and laminated work; physical properties and utilization of plywood. *Prerequisite: Forestry 163 or 164.* Three hours credit. Second semester.

176. **Forest Economics.** Forest resources of the United States and other countries; forestry as a land problem; economic importance of wood and other forest products; timber trade; exports and imports; economics of the lumber industry and other wood-using industries; forest influences; forestry and community development. *Pre-requisite: Economics 51, 53, or 153.* Three hours credit. Second semester.

181. **Elements of Forest Management.** A brief consideration of the basic principles involved in the organization, valuation, and business administration of forest properties, with particular reference to the possibilities of sustained yield management. Three hours credit. First semester.

187. **Plantation Management in the Tropics.** Economic and administrative problems of plantation management in the tropics, with special attention to rubber production. Selection and administration of large land holdings in the various countries of the tropics; labor and other practical problems involved. Valuation of tropical land and timber properties. Two hours credit. First semester.

191. **Forest Policy.** Land policies of the United States from colonial days to the present; development of federal and state forest policies and legislation; status of private forestry; forestry abroad. Two hours credit. First semester.

194. **Conservation of National Resources.** Natural resources of the United States in soil, forests, minerals, and water; their contribution to the economic and social development of the country; importance and methods of conserving them. Application of the conservation philosophy to human resources, labor, industry, and commerce in general; its importance as the basis of permanent national prosperity. Three hours credit. Each semester.

---

62. **GEOLOGY**

Professor Case and others

The Department of Geology is located in the Natural Science Building, occupying the northern half of the eastern front and extending through the four floors of the building.
ENGINEERING DRAWING

COURSE IN GEOLOGY

11. Introductory Geology. A general course leading to an understanding of the principles of physical and structural geology; required of students of civil engineering and geodesy and surveying, and open to others as an elective. Lectures, recitations, laboratory, and excursions. Four hours credit. Each semester. (Omitted second semester of 1936–37.)

For other courses in geology to which students of engineering are eligible, see the Announcement of the College of Literature, Science, and the Arts. It is suggested that Courses 12 (Historical Geology), 131 (Soil Geology), 133 and 134 (Economic Geology), are especially useful courses for engineering students.

Summer Session

Courses 11, 12, 105, and 203, or similar courses, are generally given during the Summer Session.

63. LANDSCAPE DESIGN

For full information about the courses in Landscape Design, see the Announcement of the College of Literature, Science, and the Arts.

64. MECHANISM AND ENGINEERING DRAWING

Professor Miller; Associate Professors Goulding, Finch, and Palmer; Assistant Professors Potts, Bukovsky, Clark, Cole, Eichelberger, and Hobart.

The subjects of Engineering Drawing 1, 2, and 3 comprise the total course in engineering drawing in the four-year curriculum. The content of these three subjects has been arranged to include elementary engineering drawing, descriptive geometry, and advanced engineering drawing or peculiar professional adaptations and practices. The emphasis is on the language of drawing because there is not sufficient time available in the four-year curriculum to master both the language and the art. Furthermore, the art of drawing has become subordinated to the language in modern production methods and procedures in design. It is a thorough mastery of the language of drawing which the engineering student requires for his courses in design, laboratory demonstrations, and later professional service.

It is an interesting fact that engineering drawing constitutes the sole universal language among all civilized nations. This is so because of the necessary interrelation of interests in design, manufacture, operation, and maintenance of everything with which engineering deals in all civilized nations. Common materials, common engineering problems, the trend toward common practices and foreign commerce have all worked to the end of making this the first universally understood language. It is highly important then that each engineering student understand thoroughly the basic principles, commonly used
practices, and peculiar professional applications. These classifications furnished the basis of the subdivision of the total course into its three subjects which are given in the first three semesters of the four-year curriculum. A careful introduction has been prepared for each subject in order that the student may comprehend the reasons for and the exact nature of the outline of work. This permits a maximum of coöperation between the instructor and student to the end that the instructor is essentially the chief of a squad of engineers while the students are members of his staff. It is fortunate that the basic outline of each of the three subjects can be made so simple and obvious to the student engineer because it works to a clear comprehension on his part of the importance and necessity of these subjects in his undergraduate curriculum.

**COURSES IN DRAWING**

1. **Elementary Engineering Drawing.** The principles of orthographic projection; practice in the making of working drawings; correct drafting-room practice in conventional representation; the use of instruments; practice in lettering, freehand for dimensions and notes, and mechanical for titles; reading and checking of drawings; drill on geometric constructions; instruction on blue and brown printing; practice in tracing; original drawing on tracing papers. Three two-hour drafting-room periods, three hours home work a week. Three hours credit. Each semester.

2. **Descriptive Geometry.** Exercises, instruction, and drill through the medium of 80 printed sheets of problems toward a mastery of the principles of graphical description of all of the projects with which the engineer may be concerned and to the solution of any and all cases of the five resulting geometrical problems incident to engineering design. These are the determination of distances, angles, the point in which a line pierces a surface, intersections of surfaces, and developments. Three two-hour drafting-room periods, three hours home work a week. **Prerequisite:** Draw. 1. Three hours credit. Each semester.

3. **Advanced Engineering Drawing.** Training in sketching in orthographic, isometric, and oblique projection through the use of die-cast models and exercises in which the student is required to describe graphically his solutions for certain engineering problems. Practice in the making of working drawings from sketches with emphasis on principles of dimensioning, extent of dimensioning, and methods of securing dimensions from objects. Graphical presentation of facts. Principles of structural drawing. Principles of land platting, and the making of profile and contours. Analyses of transmission of motion and power in complicated machines. Final preparation of complete set of detailed working drawings with determination of clearances and tolerances, preparation of bill of materials, and specification of special engineering processes. Two two-hour drafting-
room periods, two hours home work a week. Prerequisites: Draw. 1 and 2. Two hours credit. Each semester.

Summer Session
Courses 1, 2, and 3, or similar courses, are generally offered during the Summer Session.

65. METAL PROCESSING
Professor Boston; Associate Professor Campbell; Assistant Professor Spindler; Dr. Gilbert, Mr. Telfer, Mr. Grennan, and Mr. Parker.

The object of the courses in metal processing is to acquaint engineering students with fundamental principles, modern methods, and industrial applications relating to all phases of metal processing. Metallurgy, design, and methods of fabricating materials are correlated with manufacturing processes. Each course consists of classroom periods in which texts, notes, lectures, lantern slides, etc., are used, and laboratory periods during which the application of principles and methods are demonstrated. As occasion permits, trips are made to industrial plants to observe the practice which is treated in these courses.

The Metal Processing Laboratories occupy four floors in the south wing of the East Engineering Building. Classrooms and locker rooms are arranged adjacent to the laboratories. Special care has been taken in the selection and arrangement of equipment to facilitate instructional and research work. A chemical laboratory is provided to aid in the control of foundry operations. An electric freight elevator serves all floors. Electric power is used throughout the laboratories, furnishing good examples of group and individual drives.

The Machine Tool Laboratory, 60 by 130 feet, is on the first floor and has been carefully arranged to demonstrate the two types of machine shop methods, tool room and production. One part of the laboratory contains one or more of each of the principal types of machine tools, such as lathes, planers, grinders, shapers, drilling and milling machines, boring mills, and broaching machines, also many others of more special types, used in tool rooms. In another part of the laboratory, the machines are arranged to give the student a perspective of the machines, tools, and methods used in the manufacture of articles in production. Machine tools for this purpose are the turret lathe, screw machine, automatic screw machine, punch
press, die-casting machine, drill presses, and milling machines equipped with jigs and fixtures, automatic gear cutters, etc. Grinders are available for off-hand, tool and cutter, drill, single-point tools, surface, and cylindrical grinding. A separate room contains polishing and buffing machines and auxiliary equipment. This room is connected with an air-cleaning system. Centrally located in the laboratory and under the supervision of an attendant is a well-organized tool crib, 25 by 36 feet, containing a comprehensive assortment of measuring instruments, gauges, and small tools for machine and hand use. Adjoining this tool crib is a room in which material in process of manufacture is stored. The equipment of the laboratory offers favorable opportunity for research work on the subject of forming and cutting metals.

The University Instrument Shop on the second floor at the east end has been equipped recently for fine instrument work. In this shop, research apparatus for the various departments of the University is constructed and also general service work rendered in the repair of equipment. This work is handled by a permanent staff of machinists and is independent of instruction given to students.

The Woodworking Laboratory, 45 by 60 feet, is located on the second floor. The north side of the laboratory contains the work benches and portable power tools needed for hand work, together with the tools necessary for pattern making. On the south side are arranged a variety of woodworking machines, making the laboratory a very complete unit. Adjoining the laboratory on the west side is the pattern and wood storage room.

The Machinability Laboratory, in a separate room on the second floor, contains drill presses, lathes, and millers equipped with dynamometers, potentiometers, and wattmeters to study problems of machinability and metal cutting.

The Metal Working and Treating Laboratory, 60 by 100 feet, on the third floor, is equipped with forges, a power shear, an abrasive cut-off wheel, and a power forging hammer with necessary gas furnace, hammer tools, and dies, grinding wheel stands, engine lathe, shaper, drilling machine, and work benches. For instruction in heat treating, electric and gas-fired box type and pot furnaces with necessary accessories, including thermo-electric pyrometers and controllers, are installed. Metallurgical microscopes are available for observation of structural changes of steel resulting from heat treatment and mechanical work. The welding equipment consists of 14 oxy-acetylene welding stations, alternating and direct current electric arc, atomic hydrogen arc, electric resistance, thermit welding installations, and brazing equipment. A universal testing machine of 50,000 pounds capacity, as well as the Shore scleroscope, Rockwell, and
Brinell hardness testing instruments, are provided for instructional and research purposes. Plating and metal-finishing equipment are available for demonstrations.

The Foundry Laboratory, 60 by 130 feet, on the fourth floor, is divided into the melting, molding, core-making, and cleaning divisions. The melting equipment consists of an electric arc furnace of 200 pounds capacity, a cupola lined to 32-inch diameter, and a crucible furnace. Special equipment is available for making castings in metal molds. Six standard types of molding machines are available for general uses. Benches, racks, ovens, and miscellaneous equipment are provided for the making of cores. The cleaning equipment consists of a sand-blast machine, tumbling barrels, and grinding stands. A cyclone air cleaning system is attached to all of these machines. Materials are delivered to the cupola charging floor by an electrically operated elevator. A two-ton electric traveling crane serves the molding floor. Sand testing and core testing machines are available for routine instruction and research.

The Gauging and Measuring Laboratory, 36 by 24 feet, is located in Room 2311 on the second floor, south wing of the East Engineering Building. This laboratory contains equipment furnished by the United States Army Ordnance Department which has been supplemented by additional equipment and devices of the Department of Metal Processing. It is available for instructional purposes to engineering students, ordnance students of the R.O.T.C., and reserve officers of the Army. It is available also to the industries for standardization work or for checking gauges, measuring instruments, jigs and fixtures, and manufacturing equipment. A wide assortment of measuring and gauging devices is available for making measurements to millionths of an inch. A Pratt and Whitney universal measuring machine and supermicrometers are available for measuring, and also a wide variety of sizes of inside and outside micrometers reading in ten thousandths. A projection machine makes it possible to examine the profile of screw threads and gears at a high magnification. Surface plates, standard centers, sine bar fixtures, microscopes, and other accurate measuring devices complete the equipment for high quality work.

COURSES IN METAL PROCESSING

1. Woodwork. This course includes bench, lathe, and simple pattern work and may be varied to suit individual requirements. Two three-hour laboratory periods a week. Two hours credit. Each semester.

2. The Working, Treating, and Welding of Steel. This is a study of the principles relating to the constitution, properties, and application of steel. Manufacturing processes for these metals are outlined. The effects of mechanical working and heat treatment on
the properties of various steels are studied and demonstrated. Attention is given to welding practice, as well as to methods for protecting the ferrous metals against corrosion. One recitation and one three-hour laboratory period a week. Must be accompanied by Chem. Eng. 1. Two hours credit. Each semester.

3. Foundry. A study of the principles and practice relating to castings of gray iron, malleable iron, steel, brass, bronze, aluminum alloys, and bearing metals. The constitution and properties of these metals, as well as the casting procedure, are studied. Some attention is given to the design, production, welding, and heat treatment of castings. Two recitations and two three-hour laboratory periods a week. Prerequisite: Metal Proc. 2. Four hours credit. Each semester.

4. Machine Shop. Studies are made of the following subjects: the cutting of metals—lathe work, milling, drilling, reaming, tapping, broaching, grinding, polishing, buffing, honing, and lapping—also gear cutting, jigs, special tools, standards, measuring instruments, gauges, turret lathes, screw machines, automatic turning machines, cutting fluids, die-casting, punch and die work, spinning, as well as associated subjects such as industrial organization, accounting and unit costs, stock records, standardization, time study, routings, and manufacturing layouts. This course is planned to give a student a clear conception of the relation between design, fabricated form and type of material, and manufacturing processes used in the production of parts in small, intermediate, and large quantities. Two recitations and two three-hour laboratory periods a week. Prerequisite: Metal Proc. 2. Four hours credit. Each semester.

5. Welding Processes. This course consists of the study of the welding processes which include gas welding and cutting, electric arc welding, electric resistance welding, thermit welding, and other special welding processes. Attention is given to the advantages and applications of each of the welding processes. Sufficient time is provided for laboratory practice to permit each student to become acquainted with the procedure used in welding different metals. One lecture and one three-hour laboratory period a week. Prerequisite: Metal Proc. 2. Two hours credit. Each semester.

6. Pattern Making. Construction of wood or metal patterns from working drawings, or advanced wood-working projects based on carefully prepared manufacturing drawings. Classroom and laboratory to be arranged. Prerequisite: Metal Proc. 1. Two hours credit. Each semester.

7. Jig and Fixture Design. This course consists of a study of the principles underlying the design, construction, and application of jigs, fixtures, punches and dies, special tools, gauges, and measuring instruments for different production quantities, and the
cost analysis involved therein. Two classroom periods a week. **Prerequisite:** Mech. Eng. 6. Two hours credit. Second semester.

8. **Foundry Costs and Organization.** A study of foundry cost methods, foundry records, and standard instructions for foundry operations. Lectures and assignments. **Prerequisite:** Metal Proc. 3. Two hours credit. Second semester.

9. **Foundry.** This is a study of the melting, molding, core-making, and cleaning divisions of foundry practice; of the manufacturing processes used in the production of grey iron, malleable iron, steel, and the nonferrous alloys; of the constitution and properties of the different cast metals; and of the methods used in controlling the operations in the foundry. The relationship of the design of castings to foundry practice and the application of cast metals for different uses also are considered. For students pursuing Metallurgical Engineering. One hour in the classroom and three hours in the laboratory each week. Two hours credit. Second semester.

10. **Measuring and Gauging.** This course consists of a study of the preparation of manufacturing drawings involving various classes of fits, allowances, and tolerances. Types of gauges and measuring instruments will be studied and their application in the gauging and measuring of gauges, tools, jigs, and fixtures demonstrated. Working and inspection gauges for a component part will be designed and practice obtained in the use of master gauges. Two hours credit.

12. **Advanced Working, Treating, and Welding of Steel.** Further work on subjects scheduled in Course 2 may be elected by making arrangements with the instructor.

13. **Advanced Foundry.** For those students who are especially interested in the foundry branch of engineering, advanced foundry instruction is offered on special problems. Arrangements are to be made with the instructor.

14. **Advanced Machine Shop.** This course may be elected to suit individual requirements. Special topics incidental to machine shop practice, such as further work in machining processes, a determination of the most economical method for producing a part in quantities, and advanced tool-room work are included. For correlating design and production, students may, working separately or in groups, prepare complete manufacturing drawings of a device, carefully select the type and form of material for each part, and then actually construct it. Arrangements are to be made with the instructor.

109. **Machinability.** This course is for advanced students interested in research projects dealing with metal cutting. Factors
relating to machinability of metals or the performance of tools and cutting fluids may be investigated. The course is particularly suitable for thesis work. Hours to be arranged. Each semester.

110. Materials for Aircraft Construction. (Aero. Eng. 17). Designed for aeronautical engineering students to acquaint them with materials used in the design of aircraft. Numerous materials are studied as to their costs, physical and chemical properties and the thermal and chemical treatment best suited for resistance to corrosion, high strength-weight ratio, and ease of processing. This includes the treatment of fabrics; the forming, gluing, and joining of wood parts; the cutting, punching, bending, riveting, welding, brazing, heat treating, and actual testing of parts and structures. One class and one three-hour laboratory period each week. **Prerequisite: Metal Proc. 4 and Aero. 5.** Two hours credit. Second semester.

**Summer Session**

Courses 3, 4, 12, 13, and 14 are generally given during the Summer Session.

**66. MILITARY SCIENCE AND TACTICS**

Professor Rogers; Assistant Professors Fariss, Hardy, Wallington, Simkins, Kelley, and Wimer.

The student elects his military science courses at the same time and place as he elects his other University courses and receives academic credit therefor which counts toward graduation. He also enrolls at the Headquarters, Reserve Officers' Training Corps, on the campus. Students electing military science are excused from the required gymnasium work.

Enrollments are for a period of four semesters; that is, for either a basic group or an advanced group in its entirety. The first four semesters constitute the basic group, and the second four semesters the advanced group. Once enrolled in either group the completion of that group becomes a prerequisite to graduation unless the student is discharged from this obligation upon the recommendation of the Professor of Military Science and Tactics.

A deposit of $9.00 to cover property responsibility is required of each basic student. A deposit of $12.50 is required of each advanced-course student.

**Infantry.**—Theoretical and practical work which will enable a student to understand and make proper use of infantry weapons and handle a company of infantry according to modern tactical principles. Open to all students.

**Ordnance.**—For the first two years the student may follow any basic course. The infantry is recommended. During the last two years he gets special technical training in design and manufacture of ordnance, methods of supply and maintenance, and organization.
In view of the fact that the Ordnance Department is a technical and manufacturing branch of the Army, a student during the advanced course takes certain technical subjects in his own college which tend to make him more of a specialist in his own line, and, therefore, of more value to the Ordnance Department. Open to engineering and business administration students.

**Signal Corps.**—After the first year, the student receives such instruction as will tend to make him expert in communication work. Open to prospective electrical engineers and others interested in electrical communications.

**Military Engineering.**—Theoretical and practical work which will enable a student to apply his engineering knowledge to military work and handle an engineer company in combat. Open to students in the College of Engineering, in Architectural Design, and in Architecture Program I. Students must receive their degree before they are commissioned.

Upon election of a particular branch of engineering, R.O.T.C. students previously enrolled in an inappropriate unit may transfer to the unit to which their engineering department election makes them eligible without loss of credit.

The courses in Military Science and Tactics are designed to give a thorough groundwork in military subjects considered necessary as a part of the education of a commissioned officer in the Reserve Corps of the Army of the United States. Courses are offered in Infantry, in Ordnance, in Signal Corps, and in Military Engineering, training organized as units of the Reserve Officers' Training Corps, in which membership is limited to male citizens of the United States who are physically fit for service in the field.

While taking work in the advanced group, members of the R.O.T.C. receive payment of commutation of subsistence from the Government amounting to about $200.

Students who enroll late may double up their courses. Four semesters' time must be put in, however, before they become eligible for payment of commutation.

In the advanced group, there is a summer camp of six weeks' duration. Attendance at the advanced camp is a prerequisite to commission for students in the advanced group. Equipment is furnished and expenses at the camps are paid by the Government.

Successful completion of the courses in any unit of the R.O.T.C. will lead to a recommendation for a commission in the corresponding branch of the Officers' Reserve Corps.

Enrollment in an R.O.T.C. group is not an enlistment in a component of the Army nor does it carry with it any obligation for service at any time.
COURSES IN MILITARY SCIENCE

SIGNAL CORPS

BASIC GROUP

41. Elementary Infantry, Military Telephone, and Military Policy. One hour credit. First semester.

42. Elementary Infantry, Continued; Map Reading. One hour credit. Second semester.

43. Military Telegraphy and Telephony. Recitations and lectures. One hour credit. First semester.

44. Field Radio Sets. Recitations, lectures, laboratory work, and code practice. Installation, operation, and care of radio sets, sending and receiving. One lecture, one recitation, and one drill period. One hour credit. Second semester.

ADVANCED GROUP

45. Same as Course 7.

46. Signal Corps Organization and Tactics; and Signal Communications. Lectures and laboratory work in organization and tactics of the Signal Corps and the combined arms, and in signal communications. Two lectures, one two-hour laboratory period, and one drill period. Two hours credit. First semester.

47. Communication Engineering. Electrical engineers take Elec. Eng. 10. All other engineers take (Elec. Eng. 23) Elements of Radio Communication. First semester.

INFANTRY

BASIC GROUP

1. Elementary Infantry. Infantry drill regulations, marksman- ship, and military policy. One lecture, one conference, and one drill period. One hour credit. First semester.

3. Map and Aerial Photograph Reading; Scouting and Patrolling; Drill and Command. Theoretical and practical work in reading military maps and interpreting aerial photographs; training in gaining information of the enemy prior to and during combat. One conference, one lecture, one drill period. One hour credit. First semester.
4. **Combat Principles; Automatic Rifle; Drill and Command.** Theoretical and practical instruction in offensive and defensive combat of small units. Lecture and practical work in the use of the combined fire of the service rifle and automatic rifle. One conference, one lecture, and one drill period. One hour credit. Second semester.

**Advanced Group**

5. **Command and Leadership; Military History; 37mm Gun, 3" Mortar, and Machine Guns.** Theoretical and practical instruction in handling men. Practical work in construction, operation, and use of the guns. One lecture, one drill period, and one three-hour laboratory period. Two hours credit. First semester.

6. **Field Engineering; Combat Principles; Rifle Marksmanship; Drill and Command.** Lecture and practical work in field fortification and in the exercise of command appropriate to all grades. One conference, one drill period, and one three-hour laboratory period. Two hours credit. Second semester.

7. **Military Law; Military History and Policy; Mechanization; Administration; Drill and Command.** Elements of common law, military law, moot court-martial, rules of land warfare, military policy, company organization and administration. Two lectures, one drill period, and one two-hour laboratory period. Two hours credit. First semester.

8. **Combat Principles, Weapons and Communications; Drill and Command.** Lecture and practical work in the offensive and defensive combat of small units, tactical employment of infantry weapons, sand-table exercises, map and terrain problems. Disposition of infantry weapons and units for defensive combat. Employment of tanks and mechanized units. One lecture, one conference, one drill period, and one two-hour laboratory period. Two hours credit. Second semester.

**Ordinance**

**Advanced Group**

31. Same as Course 7.

32. **Materiel.** Small arms, guns, carriages, recoil and special mechanisms, tanks, tractors, self-propelled mounts, and fire control instruments. Two lectures, one two-hour laboratory, and one drill period. Two hours credit. Second semester.

33. **Organization and Functions of the Ordnance Department.** The organization of the Army and the Ordnance Department, a study of the functions of the Field Service and Maintenance Divisions, current ordnance problems, and problems in ordnance design. Two lectures, one two-hour laboratory period, and one drill period. Two hours credit. First semester.
34. Elective Technical Subjects. Selected technical subjects offered by the College of Engineering may be substituted in this course with the approval of the Military Department. Credits will be allowed as listed for the substituted course. One hour drill will be required. Second semester.

MILITARY ENGINEERING

Basic Group

51. Same as Course 1.

52. Same as Course 2.

53. Same as Course 3.

54. Military Sketching; Rigging and Combat Principles. Theoretical and practical instruction in military map making and sketching; practical work in rigging; tactical employment of small units in offensive and defensive combat. One conference, one lecture, and one drill period. One hour credit. Second semester.

Advanced Group

55. Field Fortifications; Explosives and Demolitions; and Combat Principles. Instruction in trench construction, emplacements, obstacles, and protective shelters; handling and use of explosives in demolitions and mine warfare. One conference, one lecture, one two-hour laboratory period, and one drill period. Two hours credit. First semester.

56. Military Bridges; Military Roads; and Organization and Duties of Engineers. Theoretical and practical instruction in military bridge expedients and pontoon bridges; location, construction, and maintenance of military roads. One lecture, one conference, one two-hour laboratory period, and one drill period. Two hours credit. Second semester.

57. Same as Course 7.

58. Organization and Duties of Engineers and Combat Principles. Instruction in the general duties of engineers and in the organization and operation of the combat regiment; fixed bridges and the principles of wartime construction; organization of the ground and tactical employment of the engineer company in combat. One conference, one lecture, one two-hour laboratory period, and one drill period. Two hours credit. Second semester.

GENERAL

Infantry Drill with Each Course.—Company drill for one hour a week is a required part of each course.

Rifle and Pistol Practice.—All R.O.T.C. students may practice on the indoor and outdoor ranges whenever practicable during
scheduled periods. Membership on the R.O.T.C. Rifle or Pistol Teams depends on both excellence in marksmanship and compliance with the rules governing attendance at practice and competitions. Hours of practice to be announced.

SUMMER CAMPS

ADVANCED

Attendance at an advanced camp is required and is a prerequisite to commission. Transportation, equipment, quarters, rations, and medical attention are furnished by the Government. In addition the student draws pay at the rate of 70 cents a day. Ample time and facilities are allowed for recreation. All camps are of six weeks' duration and begin about June 15.

Signal Corps—Fort Sheridan, Illinois.
Infantry—Camp Custer, Michigan.
Ordnance—Aberdeen Proving Ground, Maryland.
Engineer—Camp Custer, Michigan.

67. MINERALOGY AND PETROGRAPHY

Professor Hunt; Associate Professors Peck and Ramsdell; Assistant Professor Slawson.

The Mineralogical Laboratory comprises thirty-six rooms located in the northwest portion of the Natural Science Building.

The laboratory is well equipped with crystal models, natural crystals, and lecture and working collections of minerals, rocks, and thin sections. There is an excellent equipment of goniometers, polarization microscopes, and other crystallographic-optical instruments necessary for the thorough study of minerals. These instruments are all of the most modern and approved types. The blowpipe and chemical laboratories possess every facility for the qualitative and quantitative determination of minerals and rocks.

COURSES IN MINERALOGY

31. Elements of Mineralogy. This course includes the elements of crystallography, and the physical and chemical properties, occurrence, uses, and determination of the more common minerals. Two lectures and two hours laboratory a week. Prerequisite: a knowledge of elementary inorganic chemistry. Three hours credit. Each semester.

104. Useful Minerals, Building and Decorative Stones. The first half of the course treats of the properties and uses of the common minerals and ores; the second half is devoted to a discussion of rocks. Three lectures and two hours of laboratory work a week. Prerequisite: a knowledge of elementary inorganic chemistry. Three hours credit. Second semester. This course is designed primarily for students of architecture and engineering.
109. **Elements of Crystallography.** This course covers crystallography, crystal projections, and the underlying principles of crystal structure. Designed primarily for students in metallurgical engineering. Lecture and laboratory work. One hour credit. First semester.

For full information about the courses in mineralogy, see the Announcement of the College of Literature, Science, and the Arts.

**Summer Session**

For Summer Session courses in mineralogy, see Announcement of the Summer Session.

68. **MODERN LANGUAGES**

The study of a modern foreign language is considered of particular value to the student in the technical school as it serves to broaden his outlook on life by introducing him to a new literature and a new civilization. With such an asset of a cultural and social nature added to his practical training, the student should represent the ideal type of university man possessing a well-rounded and complete education, beneficial both to himself and to society.

The aim of the instruction in French, German, and Spanish is to help the student to a reading, writing, and speaking knowledge of those languages. The object of the courses of the first two years is to familiarize the student with the forms and the construction of the languages and to furnish him with practice in reading and speaking them.

The object of the courses of reading in scientific literature is to acquaint the student with the terminology and special vocabularies of the various sciences, and thus enable him to consult books and periodicals bearing on his professional work with facility and profit. Many students read, besides the work assigned for the classroom, scientific articles in the numerous foreign periodicals to be found in the Engineering Library. This is of value to the student in the pursuit of much of his advanced work. In some of the more important courses in the College of Engineering a reading knowledge, at least, of one of these languages is required.

Elective courses of two types are offered: (1) advanced courses in the language studied for those who wish to pursue work beyond actual requirements; (2) general courses in foreign literatures for cultural purposes.

**FRENCH**

1. **Elementary French.** Grammar, pronunciation, reading, dictation, and conversation. Four hours credit. Each semester.

2. **Elementary French, Continued.** Grammar, composition, dictation, conversation; reading of selections from modern authors. Four hours credit. Each semester.
11. **First Special Reading Course.** The main aim of this course is the acquisition of the ability to read French. An outline survey of the grammar precedes study of several simple reading texts. *French 11 is designed for upperclassmen who do not intend to continue more than two or three semesters.* Underclassmen may elect this course only by special permission of the Department. No credit towards graduation will be given for Course 11 until Course 12 has been satisfactorily completed. Graduate students wishing to do the work of this course should enroll early through the College, as the sections are limited in size. Four hours credit. First semester.

12. **Second Special Reading Course.** Careful reading and study of a series of graded texts constitute the work of this course, which presupposes such linguistic skill as may be attained in Course 11, or its equivalent. *Course 12 is for upperclassmen.* Underclassmen may elect it only by special permission. Graduate students wishing to do the work of this course should enroll early through the College, as the sections are limited in size. Course 12 may be followed by Course 41. Four hours credit. Second semester.

31. **Intermediate French.** Reading of modern French prose (short story, novel, or drama); composition based on a thorough review of grammar; dictation and conversation. Four hours credit. Each semester.

32. **Intermediate French, Continued.** Reading of modern prose, composition, and conversation. Four hours credit. Each semester.

For advanced elective courses, consult the Announcement of the College of Literature, Science, and the Arts.

**Summer Session**

Courses will be offered during the Summer Session.

**GERMAN**

1. **Elementary German.** Grammar, composition, reading, dictation, and conversation. Four hours credit. Each semester.

2. **Elementary German, Continued.** Grammar, composition, dictation, conversation; reading of selections from modern authors. Four hours credit. Each semester.

31. **Intermediate German.** Reading of modern German prose (short story, novel, or drama); dictation and conversation; grammar review to suit the needs of the class. Four hours credit. Each semester.

32. **Intermediate German, Continued.** Reading of scientific literature and masterpieces of classical and modern writers (drama,
novel, story); discussion, conversation, interpretation. Four hours credit. Each semester.

For advanced elective courses consult the Announcement of the College of Literature, Science, and the Arts.

**Summer Session**

Courses will be offered during the Summer Session.

**SPANISH**

1. **Elementary Spanish.** Grammar, pronunciation, reading, dictation, conversation. Four hours credit. Each semester.

2. **Elementary Spanish, Continued.** Grammar, composition, dictation, conversation; reading of selections from modern authors. Four hours credit. Each semester.

31. **Intermediate Spanish.** Reading of modern Spanish prose (short story, novel, or drama); composition based on a thorough review of grammar, dictation, and conversation. Four hours credit. Each semester.

32. **Intermediate Spanish, Continued.** Reading of modern prose; composition and conversation. Four hours credit. Each semester.

For advanced elective courses consult the Announcement of the College of Literature, Science, and the Arts.

**Summer Session**

Courses will be offered during the Summer Session.

**PHILOSOPHY**

For full information about the courses in philosophy, see the Announcement of the College of Literature, Science, and the Arts.

**ENGINEERING RESEARCH**

Professor A. E. White, Director; Professor Nelson, Editor of Publications; Associate Professor Good, Assistant Director; Mr. Potter, Assistant to the Director; Mr. Small, Assistant to the Director; Research Engineers Clark, Schneidewind, and Walker; Research Physicists Geiger, Vincent, and Wolfe; Research Associates Delp and Murphy.

The Department of Engineering Research was established in October, 1920, to afford an official department through which the laboratory facilities of the University, when not being utilized for instructional purposes, could be made available to the civic and technical interests in the State and elsewhere.

The Department does not offer course work to students in the University, but with the research problems brought to the Uni-
versity through the medium of the Department, opportunity is in many cases afforded graduate students to work on special research problems under the technical supervision of members of the faculty or the staff of the Department.

Besides such problems fellowships are administered through this Department, although the actual technical work is done in the various departments of the College.

The function of the Department is largely administrative, the actual technical direction of the researches in most cases being in the hands of members of the regular faculty.

The facilities available through the Department include the libraries of the University and the engineering and other technical laboratories. The work in the laboratories is conducted by members of the staff connected with those laboratories, thus insuring a maximum of efficiency in their utilization.
71. THE GROUP SYSTEM OF ELECTIVE STUDIES

The system provides that of the 140 hours of credit required for graduation, about 125 hours are prescribed and 15 hours may be elective. These elections may be made from announced groups of study or from other courses approved by the head of the department.

The group system allows the student to receive his instruction in the advanced subjects from a specialist. It also permits a student desiring to take up a fifth year of study to specialize in some particular branch of engineering. A student in any group will be allowed to elect work in the other departments of engineering or in the other colleges or schools of the University, subject to the approval of the head of his department. A student desiring to obtain special scientific knowledge or special business training by building on the fundamental subjects of engineering may be allowed to elect scientific courses or courses in economics or business administration under the direction and approval of the head of his department.

Information regarding the several professional departments of the College of Engineering, facilities for instruction, requirements for graduation, schedules of study, etc., will be found in the following pages.

72. AERONAUTICAL ENGINEERING

Professors STALKER and PAWŁOWSKI; Assistant Professor THOMPSON; Mr. SPRINGER.

The work in this Department has been arranged to cover all problems entering into the design and construction of machines that utilize the air as their means of support and transportation. In this connection the two main types are classified in the following groups:

Heavier-than-Air Craft, which comprises a study of general aerodynamics, the determination of stresses, and the general design of structure for all parts of an aircraft, and the design of propellers and propelling machinery.

Lighter-than-Air Craft, which includes all studies similar to those mentioned above, but with special reference to this type of machine; together with the principles involved in balloons and dirigibles, and their navigation.
The Courses offered by the Department are arranged to cover the essentials of aerodynamics necessary for the proper understanding of the action of wings, propellers, and problems connected with stability and maneuvering; and form the basis for the application of such studies to the design, construction, and analysis of performance of all types of aircraft.

From its inception the Department of Aeronautical Engineering has realized that the utilization of the air as a means of transportation, the settlement of problems confronting the designer, and the future development of this field must rest upon a thorough foundation of scientific theory. Hence preparatory courses in mathematics, theory of structures, hydromechanics, and mechanical engineering are essential. In the design of aircraft, the student is given an opportunity to apply such studies, so as to obtain the best solution to any given set of conditions.

The wind tunnels offer facilities for experimental work in all problems relating to this subject, and are available for research work for advanced students.

Aeronautical Laboratory.—The Aeronautical Laboratory consists primarily of a large wind tunnel of open throat type with double ducts for the return of the air flow. The cross section of the tunnel is an octagon, and its minor diameter may be varied from five feet to eight feet. With the large diameter the wind velocity is approximately one hundred miles per hour, and models of fifty inches span are regularly used for experimentation. This wind tunnel is at present equipped with a six-component wire balance and another balance incorporating a rigid model support particularly suited to experimentation with boundary layer control. Facilities for instruction in the testing of model propellers are now provided.

The large wind tunnel is used primarily for research work by seniors and graduate students, while a smaller rectangular throat tunnel is provided for routine instruction.

Students taking aeronautical engineering regularly take work in the electrical, mechanical, strength of materials, and automotive laboratories. Work may also be elected in other special laboratories, such as the naval tank.

Combined Courses have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.

Advice to Students of other colleges and universities, with regard to planning their courses before coming to the University, is given in section 14.

Military Science.—The attention of prospective students in aeronautical engineering is called to the Reserve Officers' Training Corps. Students in aeronautical engineering are particularly well qualified to take the work offered in preparation for air service.
Those who consider taking military science are urged to enroll at the beginning of their course. For further details see section 66.

CURRICULUM IN AERONAUTICAL ENGINEERING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Aeronautical Engineering) are required to complete the curriculum detailed below. For the definition of an hour of credit see section 50.

COURSES IN AERONAUTICAL ENGINEERING

1. **General Aeronautics.** Lectures and recitations. This is an introductory course giving briefly the essentials of aeronautics as applied to the airplane, airship, and other modern means of flight. The course begins with a brief history of the development of aeronautics, which is followed by a discussion of the fundamentals of aerodynamics and mechanics underlying the determination of the performance and stability of airplanes. *Open to all students except freshmen.* Three hours credit. Each semester.

2. **Theory of Aviation.** Lectures and recitations. In this course a development of the underlying mechanics which form the basis for the study of modern aircraft is presented. The course begins with a brief review of the fundamental experimental data and is followed by a development of the theory of airfoils, including the induced drag theory. The application of these theories to the study of aircraft performance and design is brought out and some time is devoted to the discussion of the stability of airplanes. *Must be preceded or accompanied by Math. 103 or Math. 105 and 106.* Three hours credit. Each semester.

3. **Theory and Design of Propellers.** Lectures and recitations dealing with the aerodynamic theories of the propeller and with its strength. The selection of propellers for specific conditions is discussed. The simple blade element theory, the multiplane interference and vortex theories are treated, and geared, controllable pitch, and tandem propellers are included. *Must be preceded by*

4. Airplane Structures. Lectures and recitations. This course includes the investigation of the design of the airplane from the structural standpoint. The strength and design of details are discussed. Must be preceded or accompanied by Aero. Eng. 1 and preceded by Civil Eng. 2. Three hours credit. Each semester.

5. Airplane Design. Lectures and drawing. The design of an airplane from the aerodynamical and strength standpoints to meet certain specifications is discussed. Particular stress is placed on the aerodynamic design, especially for stability and control under all flight conditions, also on the choice of materials and mechanisms. Prerequisites: Aero. Eng. 2 and 4. Two hours credit. Each semester.

6. Experimental Aerodynamics. Lectures and laboratory. This course is designed so as to illustrate experimentally the various basic principles of aerodynamics studied in Courses 1 and 2. The lectures cover such topics as the construction of wind tunnels, balances, devices for the measurement of air speed and other instruments, as well as the interpretation of wind tunnel data and its use in the calculation of the performance of a full-scale airplane. Such questions as scale and turbulence effects and jet boundary corrections are considered in some detail, and mention is made of the methods for conducting flight tests and the correlation of the resulting data.

The experiments conducted in the laboratory illustrate the methods employed in the measurement of wind velocities, the determination of the aerodynamic characteristics of airfoils, and the effect of variations in their shape. Prerequisites: Aero. Eng. 2. Open only to seniors and graduates. One hour credit. Each semester.

7, 8. Lighter-than-Air Craft. Lectures and recitations. This course is concerned with the following: aerostatics, and major aerodynamic and structural design problems of non-rigid, semi-rigid, and rigid aircraft. Two hours credit. Second semester.

10. Airports. Lectures, recitations, and drawing. Planning and equipment of airports. General plans of an airport are prepared. Prerequisites: Aero. Eng. 2 and 7. Two hours credit. First or second semester if required.

11, 11a. Dynamics of the Airplane. Lectures and recitations. An advanced study of the dynamics of the airplane and its parts. The mathematical theory of the stability of the airplane as a rigid body is given, following Bryan's treatment, with Bairstow's application of experimentally determined resistance derivatives and rotary coefficients. The subjects of spinning and the vibration and flutter of certain parts of the airplane are also discussed. Some atten-
tion is given to the methods used in obtaining experimental results and in interpreting them in the light of the theoretical developments. 

**Prerequisites:** Aero. Eng. 2 and Math. 39. Aero. Eng. 11 is a prerequisite for 11a, the former being offered during the first semester and the latter in the second. Two hours credit for each course.

12. **Seminar.** Reading and reports on selected aerodynamical and aeronautical problems. *Open only to graduates and seniors who receive special permission.* A reading knowledge of French and German is most desirable. Credit to be arranged. Each semester.

13. **Advanced Design.** Continuation of Aero. Eng. 5, taking up some of the more complex or special problems. *Open primarily to graduates.* Credit to be arranged. Each semester.

15. **Theoretical Aerodynamics.** A brief summary of the fundamentals of the mathematical theory of hydrodynamics including Helmholtz’ laws of vortex motion, followed by a discussion of two-dimensional fluid motion and its application to modern aerodynamics. The theory of the geometry and dynamics of airfoil sections is treated in considerable detail. This subject is followed by a discussion of the theory of thin wing sections and a treatment of the mathematical details of the induced drag theory of the monoplane. 

**Prerequisites:** Aero. Eng. 2 and Math. 39. A reading knowledge of French or German and some advanced work in Mathematics is desirable but not necessary. Three hours credit. First semester.

15a. **Advanced Theoretical Aerodynamics.** This course is a continuation of Aeronautical Engineering 15 and begins with a detailed analysis of the flow field around a monoplane wing followed by an exposition of the geometry and dynamics of the two-dimensional biplane. The calculation of the induced drag of a biplane is then taken up in detail; considerable time is also spent on the mechanics of viscous fluids, the boundary layer theory, and their applications to aeronautics. The remainder of the course will discuss topics desired by the student selected from some of the more recent developments in the flow of perfect and viscous fluids. Lectures and problems. *Prerequisite:* Aero. Eng. 15. Three hours credit. Second semester.

16. **Air Transportation.** Engineering and economic aspects. Two hours credit. First semester.

17. **Aircraft, Materials of Construction.** See Metal Proc. 10.
18. **Helicopters and Autogiros.** *Prerequisite: Aero. Eng. 2.* One hour credit. Second semester.

19. **Analytical Research.** A theoretical investigation of problems in aeronautical engineering which are particularly suited to treatment by analytical and mathematical methods. Problems may be selected from the fields of aerodynamics, structures, and airplane performance. Hours and credit to be arranged.

20. **Advanced Fluid Mechanics.** An advanced course in fluid mechanics covering much the same material as that included in Aero. Eng. 15 and 15a. The details of the mathematical developments in the various theories studied are largely omitted, and the emphasis is mainly on the physical aspects of these problems and their applications in engineering. The course includes discussion of problems in the fields of aeronautical, hydraulic, marine, and mechanical engineering. Students wishing to specialize in aerodynamics should elect Aero. Eng. 15 and 15a, while those wishing to make a general survey of the advanced work in this field should elect Aero. Eng. 20. *Prerequisites: Eng. Mech. 4 and Math. 39.* Three hours credit. First semester.

21. **Advanced Theory of Propellers.** The content of Aero. Eng. 3, omitting routine investigations, is covered in a short time and supplemented by a more critical investigation of the fundamental aerodynamic and strength theories of the propeller; special topics include windmills and blowers. Two hours credit.

22. **Propeller Research.** Investigation of special propeller and helicopter problems in the laboratory. Credit to be arranged.

23. **Advanced Airplane Structures.** This course deals with the structural analysis of metal airplanes. Lectures will cover the subject of stability of commonly used sections and shapes in aircraft structures under compression, bending, torsion, and combined stresses, and monocoque and semimonocoque structures. The practical design of Wagner, truss-type, corrugated, and composite-type shear webs will be considered. *Prerequisites: Aero. Eng. 4, or by special arrangement for students from other departments.* Three hours credit. Second semester.

24. **Advanced Experimental Aerodynamics.** This course covers the work presented in Aero. Eng. 6, but with considerably more attention to detail and a more elaborate discussion of the advanced theories and methods used in this field. The program of experimental work is adapted to the use of the large seven-foot wind tunnel and includes experiments illustrating the application of experimental methods to a number of fundamental aerodynamic problems. *Prerequisites: Eng. Mech. 4 and Math. 37.* Two hours credit.
The following subjects form a part of the Aeronautical Engineering curriculum:

Mech. Eng. 15. Internal Combustion Engines

For descriptions of these courses see Mechanical Engineering, section 80.

For descriptions of these courses see Engineering Mechanics, section 77.

73. ASTRONOMY
Professor H. D. CURTIS; Associate Professors Rossiter,* Rufus, and McLaughlin; Assistant Professor Maxwell; Dr. Losh and Dr. Williams.

The University Observatory is situated at the corner of Ann and Observatory Streets.

Its equipment includes a 37½-inch equatorial reflecting telescope, which is used for stellar spectrographic work; a 12½-inch equatorial refractor; a 6-inch meridian circle; a comet seeker; mean and sidereal clocks and chronometers, chronograph, theodolites, sextants, seismographs, computing machines, and measuring engines.

The Observatory Library contains about 6,000 volumes, devoted mainly to technical astronomy. It includes the more important works on theoretical and practical astronomy, many star catalogs, files of the leading astronomical periodicals, and the publications of the more important observatories.

The Astronomical Laboratory is located on the fifth floor and the roof of Angell Hall. The present equipment of this laboratory includes a 15-inch reflector, a 10-inch refractor, a 3-inch astronomical transit, a horizontal spectrohelioscope, 3 portable refractors, a planetarium, celestial globes, and other smaller instruments.

The Observatory maintains, through the generosity of Mr. Robert P. Lamont, '91e, a branch observing station, called the Lamont-Hussey Observatory, in Bloemfontein, South Africa. The equipment includes a 27-inch refractor and a 6-inch visual and photographic telescope. The observers at Bloemfontein are devoting their time to research in the field of visual double stars.

Another branch observatory is the McMath-Hulbert Observa-

*Professor Rossiter is in charge of the Lamont-Hussey Observatory of the University of Michigan, Bloemfontein, Orange Free State, South Africa.
ASTRONOMY

101

tory, located at Lake Angelus, Michigan, of which Robert R. Mc-
Math, '14e, is Director. This institution specializes in the recording,
by the motion picture method, of celestial phenomena showing
motion or change. It contains a 10½-inch reflector, with much
auxiliary apparatus, and a new solar tower, for studies of solar
phenomena, is nearing completion.

CURRICULUM IN ASTRONOMY

The first two years' work in any department of engineering
constitutes good preparation for a curriculum looking toward the
profession of astronomy.

Candidates for the degree of Bachelor of Science in Engineering
(Astronomy) are required to complete the following program of
studies:

a) Preparatory Courses

Total: 56 or 58 hours

Summary:

Preparatory Courses: 65 hours
Secondary and Technical Courses: 56 or 58 hours
Electives, nontechnical, additional 6 hours; in astronomy, physics, or other sciences, 11 or 13 hours: 19 or 17 hours

Total: 140 hours
Courses 31, 32, 33, 103, and 104 are recommended to those who wish to obtain a general knowledge of modern astronomy without entering far into its mathematical details. Courses 35, 101, 102, 154, and 201 are recommended to those who wish to obtain a knowledge of practical astronomy in its applications to engineering and geodesy.

Courses in addition to those mentioned below are listed in the Announcement of the College of Literature, Science, and the Arts. These include advanced work in theoretical astronomy, practical astronomy, and astrophysics. The larger instruments of the Observatory are intended primarily for research, and are available to that end to such students as have assigned problems requiring their use.

31. Descriptive Astronomy. The Solar System. A descriptive course, including the fundamental principles of astronomy, and a presentation of the leading facts concerning the sun, moon, planets, and comets. Three lectures or recitations, and one observatory exercise. Three hours credit. Each semester.

32. Descriptive Astronomy. Stars and Nebulae. A descriptive course, devoted mainly to stars and nebulae, including the study of the sun as a typical star. Three lectures or recitations, and one observatory exercise. Three hours credit. Each semester.

33. Observational Astronomy. Constellation studies and telescopic examinations of the heavenly bodies. Selected problems with the celestial globe and equatorial telescope. Laboratory period of three hours. Open to those who have had or are taking Astron. 31, 32, or 35. One hour credit. Each semester.

35. Practical Astronomy. The elements of spherical and geodetical astronomy, with practical applications. Theory of the determination of time, latitude, longitude, and azimuth. This course is intended primarily for students in Engineering. Recitations and problems. Open to those who have had trigonometry and analytical geometry. Two hours credit. Each semester.

101. Practical Astronomy. Studies in spherical astronomy. Theory of the meridian circle and equatorial and their use in observational work. This course includes observational work with instruments and the reduction of measurements. Recitations, practical problems. Open to those who have had trigonometry and analytical geometry. Three hours credit. First semester.

102. Navigation. The principles of pilotage, dead reckoning, and nautical astronomy. Lectures based on Bowditch’s American Practical Navigator, supplemented by practical problems, chart exer-

152. Astrophysics. Studies of methods and results in physical astronomy and especially in stellar spectroscopy. Three recitations and one laboratory period each week. Open to those who have had calculus and possess a general knowledge of astronomy and physics. Four hours credit. Second semester.

201. Theoretical Astronomy. The elements of celestial mechanics, and the determination of parabolic and elliptic orbits of comets and planets. Prerequisite: Course 101 and calculus. Three hours credit. First semester.

Summer Session
Courses 31, 32, 33, 101, 103, 151, 152, and 207, or similar courses, will be given during the Summer Session.

74. CHEMICAL AND METALLURGICAL ENGINEERING
Professors A. H. White, A. E. White, Badger, Brier, Upthegrove, Brown, Wood, and Baker; Associate Professor McCabe; Assistant Professors Thomassen and McCready; Research Engineer and Lecturer Clark.*

THE CHEMICAL ENGINEER
The chemical engineer finds his principal work in the design or operation of plants in which materials undergo chemical as well as physical changes. In our complex industries there must be specialization, and some chemical engineers become experts in design of equipment, some in the operation of particular manufacturing processes, and some in the development of processes from the laboratory to the manufacturing scale. The chemical engineer's work must be based on a thorough knowledge of chemistry, but he is not a laboratory chemist. He must apply mathematics and physics in almost the same degree that he does chemistry. His relation to the chemist is very similar to that of the electrical engineer to the physicist. Like all engineers, the mature chemical engineer may

*Rank equivalent to Assistant Professor of Metallurgical Engineering.
become a business executive, utilizing his scientific knowledge and manufacturing experience in directing industrial enterprises.

The activities of the chemical engineer cover a broad field. He finds his work, not only in those industries usually thought of as purely chemical, such as the manufacture of acids, alkalies, and salts; but in such industries as the manufacture of sugar, paper, leather, rubber, soap, fuels, petroleum products, paints and varnishes, cement, plaster, glue, food products, dyes, textiles, and many others.

Statistics compiled in 1930 from 1,100 questionnaires filled out by graduates from various universities in the years 1920-30 showed that 23 per cent of chemical engineering graduates became teachers, were connected with research institutes, entered governmental employment, became consulting engineers, or entered the professions of law or medicine. Seventy-two per cent were directly connected with industry and were enrolled in the following industries arranged according to the numbers employed. The industry which at that time was taking the largest proportion of chemical engineering graduates was petroleum, and it was followed by organic chemicals; heavy chemicals; rubber; iron and steel; gas and coke; paint, varnish, and lacquer; pulp and paper; nonferrous metals; vegetable oils and soap; automobiles; chemical equipment; power plants and public utilities other than gas; food; rayon; ceramics; cement and lime; textiles (natural); fertilizers; and leather.

The work of the chemical engineer is often thought of in connection with what are usually called "unit operations." These are such operations as heating, evaporating, filtering, distilling, crushing, extracting, and drying, as carried out on a commercial scale. Any manufacturing process with which the chemical engineer deals is made up of a sequence of such operations. His knowledge of these unit operations is one characteristic which distinguishes him from the chemist, and his understanding of what is actually taking place in a manufacturing process differentiates him from the mechanical engineer.

Chemical Engineering may be subdivided into many other special branches of engineering and such titles as Gas and Combustion Engineering, Ceramic Engineering, Petroleum Engineering, and Electrochemical Engineering are not unfamiliar and are sometimes recognized as independent divisions.

At the University of Michigan, pronounced distinction is not made in the various fields of Chemical Engineering and all instruction is given under the administration of the Department of Chemical Engineering. The first two years of undergraduate work are devoted largely to acquisition of fundamental subjects as tools required for an understanding of the more specialized subjects. In these years the student should become familiar with mechanical drawing, mathematics, physics, and chemistry, and begin his work in chemical engineering. He also should acquire some proficiency
in the use of the English language, and it is advisable that he obtain a reading knowledge of German, so that there will be available to him valuable publications appearing in the German chemical literature.

In the last two years, attention is divided between studies in Chemical Engineering, advanced work in chemistry, and the fundamentals of other pertinent engineering subjects, such as engineering mechanics, machine design, heat engines, and electrical machines and circuits. An introductory knowledge of economics is obtained and elective subjects provide opportunity for a limited amount of study in such subjects as history, philosophy, and political science.

The work in Chemical Engineering subjects is designed to give the student as broad a foundation as possible, avoiding marked specialization and yet carrying his training in one direction sufficiently far so that upon graduation he may be immediately useful to some organization. Our chemical engineers, even on graduation from a four-year course, often accept positions where they become the sole chemical or metallurgical engineer in the organization, and these men must consequently be fitted to accept and carry creditably such responsibility.

The required work in Chemical Engineering includes courses in engineering materials, fuels and combustion, heat treatment and properties of metals, inorganic and organic chemical technology, unit operations, and an introduction to research work. This research work may be in any field chosen by the student, and, taken with other elective work, offers opportunity for moderate specialization.

THE METALLURGICAL ENGINEER

The metallurgical engineer is more specially concerned with metals than with other engineering materials. The activities of the metallurgical engineer cover the extraction of metals from their ores, their melting, refining, alloying, casting, fabrication and heat treatment, and their utilization in the various industries. He finds his work not only in the industries involved directly in the production of metals and metal products, but also to an ever-increasing extent in the industries utilizing, and dependent for their existence on, metals and metal products. Diminishing supplies of high-grade ores and an increasing demand for new alloys of superior qualities make this field one of ever-growing importance.

THE CHEMICAL AND THE METALLURGICAL ENGINEER WITH GRADUATE TRAINING

The mere fact that the chemical or the metallurgical engineer must have considerable attainments in the important fields of chemistry, physics, and mathematics, as well as in chemical or metallurgical engineering, indicates the need of more than four years' study. Statistics from a number of universities showed that in 1930 34 per
cent of the graduates from the four-year courses continued for at least one year of graduate work.

The formative state of these branches and their rapid development, which is certain to continue for many years, make it important that a young man entering the profession be equipped not only to keep abreast of their progress, but also to do his part in advancing his chosen subject during his active professional life. This is definitely recognized by many of the larger corporations, who prefer a man with a master’s degree to one with a bachelor’s degree on the grounds that the man with postgraduate training advances faster and further than an equally able man without it. They recognize this, not only by being more willing to employ men with advanced degrees, but by paying higher salaries to such men.

During the past three years there has been an average of eighty-four graduate students registered in these subjects at the University of Michigan. The size of this group makes it feasible to offer special courses not only in chemical and metallurgical engineering but also in mathematics and physics.

A notable development of recent years has been the call for men with a Ph.D. degree. The demand for these men has held up well during the depression, and at the time when this is written all of the thirty-two men who have received the Ph.D. in the last three years are employed in professional capacities.

No one should undertake graduate work unless his standing as an undergraduate has shown scholastic ability. In general, he should have ranked in the upper third of his class and have done well in mathematics and physics as well as in chemistry. All graduate students are enrolled in the Graduate School of the University.

The Chemical and Metallurgical Engineering Library is shelved with other departmental libraries on the third floor of the East Engineering Building. The library is 33 by 60 feet and has shelves for 15,000 books and seats for 80 readers. Some of the most important journals of pure chemistry are duplicated in this library and there is a rich collection of journals dealing with industrial chemistry, chemical engineering, and metallurgical engineering. About one hundred journals are currently taken by the Department of Chemical and Metallurgical Engineering and most of them are represented by complete sets. In addition to 6,000 books dealing distinctly with chemical and metallurgical engineering, there are many others dealing with more general engineering lines.

Chemical and Metallurgical Engineering Facilities.—The Department is not only fortunate in having assigned to it over one-third of the 160,000 square feet of space in the East Engineering Building, but is also fortunate in its neighbors. The forge shop and foundry of the Department of Metal Processing are adjacent to and cooperate closely with the metallurgical laboratories. The highway laboratories with their facilities for study of the properties of
cement, brick, and asphalt are also in this building. The Department of Engineering Research with its many-sided activities has its head-quarters here.

The Department has assigned to it over 80 rooms, including laboratories, classrooms, storerooms, and offices. There are 12 single-unit and 15 double-unit laboratories available for research workers, in addition to the laboratories reserved for members of the staff. There is a workshop with 2 mechanics who give their whole time to the departmental work, and a second shop for the use of graduate students who wish to make or repair their own apparatus.

The General Chemical Engineering Laboratory is devoted primarily to equipment for studying the fundamental elements of chemical engineering. It has facilities for the following unit operations:

Evaporation.—The evaporator laboratory occupies a space 26 by 69 feet, extending from the basement through the first floor. The principal equipment is a set of evaporators and accessories which are the gift of the Swenson Evaporator Company of Harvey, Illinois. It is the most complete and extensive equipment of its kind in the country. The evaporators include a standard vertical tube unit, a standard horizontal tube type, and a forced circulation unit. Each of these evaporators has a maximum evaporation capacity of 4,000 pounds of water per hour. Each is completely equipped with accessories for weighing and controlling feed, removing crystals, and measuring condensate; and each has the greatest possible flexibility to permit adaptation to process development. Other special evaporators for research purposes are available or are constructed as needed.

There is also a full complement of equipment for work in high-temperature evaporation. This includes a gas-fire diphenyl boiler rated at 150,000 B.t.u. per hour, a small forced-circulation evaporator, and an elaborate heat-interchange apparatus, both equipped for using diphenyl heat. These pieces of equipment are provided with measuring devices of all sorts, for making complete tests. Operations can be carried out at temperatures up to 850°F.

Distillation.—Facilities for the study of batch and continuous distillation, and of dephlegmation, are available. The equipment includes a 250-gallon still, provided with a 10-plate, 10-inch diameter bubbler cap column. Another 3-plate column, of the same size, equipped so that the distance between plates, height of overflow pipes, and design of caps can be varied at will utilizes the same still as a source of vapor. A glass section can be inserted in the latter column to permit observation of the action of liquid and vapor on the plate. All of the apparatus is designed with a view to studying the fundamental principles of fractional distillation and fractional condensation.
Gas Absorption.—An absorption column that can be filled with various types of tower packing is available.

Filtration.—The present equipment consists of a 24-inch washing plate-and-frame filter press, with an assortment of special frames; a small model pressure-leaf filter of \( \frac{1}{4} \) square foot filtering surface; a complete Vallez pressure-leaf filter of 4 square feet filtering surface, a 10-inch portable Weston centrifuge, and a 30-inch bottom-discharge Tolhurst centrifuge.

Crystallization.—For this work there is a special 30-foot single-deck Swenson-Walker continuous crystallizer with dewatering attachment, a vacuum crystallizer with a jet injector for high vacua, a semicommercial classifying crystallizer, and a vertical batch crystallizer.

General Equipment.—In addition to special equipment of the types enumerated, the laboratory is well equipped with storage, reaction, and weighing tanks, pumps, blowers, motors, scales, condensers, digesters, autoclaves, and all necessary accessories. Soft water may be obtained from two Zeolite water softeners, and a supply of condensed water nearly as pure as distilled water is also on hand. Additions will be made to the equipment of the laboratory as these become necessary or desirable. The aim at all times will be to provide facilities for fundamental investigations rather than to equip a museum of chemical machinery.

Gas, Fuel, and Combustion Laboratories.—In this group are included laboratories for general class work in the analysis and calorimetry of industrial gases and fuels, and special testing and research laboratories for petroleum products, motor fuels, combustion furnaces, and gas manufacture.

The Gas and Fuel Laboratories occupy two large rooms on the fourth floor of the north wing. They contain apparatus for the analysis of flue and fuel gases; calorimeters for gas, liquid, and solid fuels; and equipment for testing boiler water, lubricants, and fuels.

The Petroleum Laboratory has complete facilities for study of motor fuels, oils, and other petroleum products. These are supplemented by the equipment available in the general chemical engineering laboratory, the fuel research laboratory, and the automobile engineering laboratory.

The Fuel Research Laboratory is especially equipped to study the various factors involved in the utilization of motor fuel. Two electric absorption dynamometers and typical automobile engines are available for making engine performance tests, and a special high compression engine for making anti-knock tests. The laboratory is also supplied with ammonia refrigeration for conducting
tests at low temperature. Special columns for fractional distillation of fuels and special equipment for measuring volatility are available in addition to the standard equipment.

The Combustion Laboratories have special facilities for research and testing in the field of gaseous explosions, particularly the explosion of hydrocarbon-air mixtures in a closed vessel as it occurs in internal combustion engines. These are supplemented by equipment in the fuel research and automotive laboratories.

The Furnace Laboratory contains furnaces equipped for making heat balances, and for determining the properties of furnace materials and the laws of heat transfer and gas flow as applied to furnaces. A diphenyl flash boiler with a capacity of 300,000 B.t.u. per hour with air preheater is available for testing purposes.

The Gas Engineering Laboratory contains furnaces for manufacture of gas on a small scale and for measuring and testing the finished products. This laboratory is largely devoted to the research work of the Michigan Gas Association. The laboratory facilities are supplemented by the use of the production equipment in some one of the coal or carbureted water gas plants in Michigan when the laboratory results of the work in progress indicate that full-scale plant tests are desirable.

Metallurgical Engineering Laboratories.—The Metallurgical Engineering Laboratories are located on the fourth floor of the East Engineering Building, adjacent to the Gas and Fuel Laboratories and to the Foundry and Metal Working and Treating Laboratory of the Department of Metal Processing, so that the facilities of these laboratories are conveniently available. Equipment for heat treating and melting is provided in a large furnace room equipped with standard electric and gas furnaces. Facilities are provided for electro-metallurgical work and experimental electric furnace work in this room. Power is furnished through three 50 kw. transformers. A 35 high-frequency converter provides facilities for induction melting, vacuum fusion, and determination of gas content of metals.

For instruction in metallography, facilities are provided in the way of a large grinding and polishing room, a microscope and camera room, and well-equipped darkrooms. A smaller room fully equipped with grinding, polishing, and microscopic equipment, and special camera and darkrooms are available for graduate students.

For testing physical properties of metals a special 60,000-pound Olsen testing machine is equipped for studies at elevated temperatures. Special instruments such as the Vickers Brinell hardness machine, Microcharacter, Shore scleroscope, Rockwell hardness tester, fatigue machines, Izod impact, and others are available. Special equipment is available for study of the creep of metals at elevated temperatures. General physical testing equipment is provided in the Engineering Mechanics Laboratory.
In the *Pyrometry Laboratory* the equipment includes several types of millivoltmeters, indicating and recording potentiometers, a transformation point apparatus, optical and radiation pyrometers, various types of thermocouples, and ample facilities for calibrating and checking pyrometric apparatus. The equipment has been selected with the aim of supplying the student with information that will enable him to take charge of the installation and control of commercial pyrometric and temperature-control systems.

*The X-ray Laboratory* has modern equipment both for radiography and for crystal diffraction investigations. The radiographic installation is rated at a maximum of 280,000 volts and can thus produce highly penetrating x-rays. It is used for the inspection of metals, especially welds and castings, and also for certain types of grain-structure investigations.

Smaller x-ray equipment is used for researches on crystal structure, grain size, and inner strains, with special reference to engineering materials. A special camera for precision determination of lattice constants and a photographic densitometer are available. The laboratory also has electric furnaces equipped with temperature controllers, including a vacuum furnace.

*The Technology Laboratories.*—This group consists of a number of small laboratories, each equipped with facilities especially adaptable for study and research on the problems arising in the respective industries.

*The Cement Laboratory* is equipped with a small rotary kiln and other apparatus for burning Portland cement under controlled conditions and for testing the properties of cements.

*The Ceramics Laboratories* consist of a kiln room, preparation room, and laboratory. The kiln room is equipped with oil- and gas-fired recuperative kilns for high-temperature work, and for testing the burning properties of clays and refractory products. The preparation room includes crushing and grinding equipment, a dry pan for fine grinding of shales and hard clays, two mixers, a pugmill and extruding machine, glass-topped tables, and other equipment used in preparing clays for burning. The laboratory is supplied with a Fairbanks testing machine, volumeter, and means for analyzing and testing the raw and burned clay and foundry sands.

*The Electrochemical Laboratory* provides research facilities for electrochemical work. Direct current is available from a battery of 100 lead storage cells, a 5 kw. motor-generator set, and from the 110-volt line. Laboratory equipment includes a Wendt electrometric apparatus, conductivity bridges, and a complement of electrical instruments. Equipment for the study of electrothermal and high-temperature electrolytic processes are also available as part of the facilities of the metallurgical engineering laboratories.
The Solution Properties Laboratory provides facilities for the accurate measurement of boiling points, solubilities, viscosities, specific heats, and heats of dilution of the solutions of industrially important chemicals.

The Paint and Varnish Laboratory provides facilities for the study of the manufacture and application of paints, varnishes, nitrocellulose lacquers, enamels, and other finishing materials. In addition to regular laboratory facilities the equipment includes grinding apparatus, washed-air drying kiln, oven for baking japans and varnishes at high temperature, as well as spray-gun equipment for the application of various kinds of finishing materials. Quartz mercury and carbon arc vapor lamps furnish ultraviolet light, which is used as an accelerated weathering test for paint, varnish, and lacquer films. Additional facilities are also available in the general Chemical Engineering Laboratories.

The Pulp and Paper Laboratory is equipped to make and test sheets of paper. Equipment includes a digester and an autoclave for making pulp; pulp screen, ball mill, beater, sheet-making apparatus of the latest type, and paper-testing equipment. A constant temperature and humidity room houses the apparatus which requires these conditions.

General Laboratories.—Undergraduates whose work does not place them in one of the special laboratories have space assigned to them in one of two large laboratories which are equipped with the usual facilities of laboratory tables, water, compressed air, direct, alternating, and storage-battery current, analytical balances, and tables for study and computation of results.

Graduate students working on special problems have assigned to them individual graduate laboratories which are equipped with general laboratory facilities.

Visits of Inspection.—The educational value of visits of inspection is well recognized and inspection trips are regularly made in connection with the various courses in chemical engineering. The great industrial development of the neighboring cities of Detroit and Toledo, as well as other points in Michigan within easy reach of Ann Arbor, allows a varied range of industries to be visited at small expense. The opportunities are so abundant that the list varies from year to year.

Summer Employment.—Each student is urged to obtain employment in a factory for at least one summer, in order that he may acquire the viewpoint of the worker in an industrial organization. If he may also acquire professional knowledge, so much the better. The manufacturers of Michigan cooperate in this movement, and, except in time of severe business depression, positions are usually available. At least one summer's work in an approved plant
is required in the five-year program in chemical and industrial engineering.

Gas Engineering.—The subject of gas manufacture and utilization has been given special attention in the Department for over twenty years. No prescribed curriculum has ever been required, and it is not felt that a special degree need be given. The undergraduate program in Chemical Engineering gives the necessary fundamental courses, and the options in the senior year provide room for some special courses. Those desiring to specialize in gas engineering should, preferably, continue as graduate students, and choose subjects in other engineering branches as well as chemical engineering.

The Detroit City Gas Company, the Consumers Power Company, and the Associated Gas and Electric System join with the University in a co-operative program which permits selected students to obtain fourteen months' practical experience in a program which requires five years for its completion.

Combined Courses have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.

Advice to Students of other colleges and universities, with regard to planning their courses before coming to the University, is to be found in section 14. Prospective students of chemical engineering are strongly urged to select German as the language to be studied, and to avoid specialization along the lines of chemistry and chemical engineering in their preparatory work. Students in doubt of elections to be made in the first three years' work are cordially invited to correspond with the Department of Chemical Engineering.

Student Branch, American Institute of Chemical Engineers. A student branch of this organization was established in 1922, and holds monthly meetings for discussion of topics of professional interest. It has a convenient and pleasant clubroom adjoining the seminar room in the East Engineering Building.

Reserve Officers' Training Corps.—The College of Engineering contains units of infantry, signal corps, and ordnance in the Reserve Officers' Training Corps. Students completing the required work may obtain commissions as reserve officers. The ordnance unit is especially attractive to chemical engineers, and there is sufficient flexibility in the program so that they may obtain the necessary military credits without increasing the time in residence, provided they take one summer in a military camp.

CURRICULUM IN CHEMICAL ENGINEERING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Chemical Engineering) are required to complete the curriculum detailed below. For the definition of an hour of credit see section 50. Programs embodying certain required courses have been estab-
lished for the four-year course in chemical engineering and the five-year course in chemical and industrial engineering. Both of these programs provide some elective courses. The only limitation placed on these elections is that these courses shall be so chosen as to make a logically arranged curriculum.

Students in chemical engineering who become candidates for degrees in both chemical engineering and mathematics are permitted to make the following substitutions:

1. They may substitute 12 hours of chemistry (beyond Chem.
for the following courses at present required in the mathematics curriculum (sec. 79): Eng. Mech. 3 and 4, Civil Eng. 2, and Surv. 1.

2. They may select any two of the following three substitutions in the regular chemical engineering curriculum:
   
   a) Substitute advanced mathematics for Mech. Eng. 2a, three hours.
   
   b) Substitute advanced mathematics for Economics 173, three hours.
   
   c) Substitute advanced mathematics, four hours, and Chem. 63, four hours, for Chem. 67E and 69E, eight hours.

3. In special cases other substitutions, approved by both the Chemical Engineering and Mathematics Departments, may be made.

### THE FIVE-YEAR CURRICULUM IN CHEMICAL AND INDUSTRIAL ENGINEERING

A five-year curriculum including courses in chemical engineering and business administration has been prepared, leading to the degree of Bachelor of Science in Engineering (Chemical Engineering) at the end of the fourth year and to the degree of Master of Science (Industrial Engineering) at the end of the fifth year. The undergraduate program contains the full program in chemical engineering with the substitution of Economics 53, 54, 171, and 172 for the economics specified in the usual four-year course. Business Administration 113 is to be added. This program does not permit any technical electives and requires 141 hours of credit for its completion. Students in the fifth year will enroll in the Graduate School and at the completion of one year's work on an approved program will receive the M.S. degree in Industrial Engineering.
COOPERATIVE PROGRAM IN GAS ENGINEERING

The Consumers Power Company, the Detroit City Gas Company, the Associated Gas and Electric System, the Peoples Gas Light and Coke Company of Chicago, Illinois, and the Brooklyn Union Gas Company have joined with the College of Engineering to maintain a cooperative program for students interested in gas engineering. This program will require for its completion four years and ten months, of which time eight semesters and one summer session will be spent at the University. There will be one preliminary employment period of eight weeks in the summer following the freshman year and two employment periods of seven months each, the first starting at the end of the second year and the second in the middle of the fourth year. There will be either one or two vacation periods of two weeks in each summer. Students in the Engineering College will be given an opportunity to learn details of the cooperative program at some time during the freshman year. Those who become interested and who are accepted will be employed by one of the companies for a preliminary period of eight weeks during the following summer. At the end of this preliminary period, students who have made a satisfactory record and are still interested may be formally enrolled for the cooperative program. A student thus enrolled will continue his second year of study in the Department of Chemical Engineering without interruption, and will be employed at the end of that period, by the company with which he has established relations, for a practice period which will continue for seven months, commencing July 1 and ending February 1. The student will then return to the University and remain in residence for twelve months, studying for two semesters and a summer school. On February 1 he will be reemployed by the gas company for a second practice period of seven months, lasting until September 1. He will then return to the University for two semesters of study and should normally graduate in the following June.

The companies agree to give the students entering upon this work a somewhat varied employment which will put them in direct contact with various aspects of gas manufacturing, distribution, and accounting, and to pay them at the prevailing rate paid other workmen for the same type of work, but not less than fifty cents per hour. The company will retain the same rights to transfer, discharge, or alter the rate of pay of the student employees that it has over its regular employees.

COURSES IN CHEMICAL AND METALLURGICAL ENGINEERING

The courses given in the Department of Chemical and Metallurgical Engineering are listed below under the headings "Chemical Engineering" and "Metallurgical Engineering." A large number of the courses though listed only under one heading are common to the requirements of graduate and undergraduate programs of both Chemical Engineering and Metallurgical Engineering.
1. Engineering Materials. An elementary study of the manufacture and properties of the ferrous and nonferrous alloys, cements, clay products, protective coatings, fuels, and water softening. Two lectures and two recitations. Prerequisites: Chem. 5 or an acceptable high-school course. Must be accompanied by Metal Proc. 2. Three hours credit. Each semester.

2. Fuels and Furnaces. A study of the preparation, combustion, and utilization of fuels; including temperature measurement, analysis of gases and fuels, determination of heating values, and furnace efficiencies, the computation of heat balances, maximum temperatures, and relative costs of heating. Three lectures or recitations and one four-hour laboratory period. Prerequisites: Chem. Eng. 1. Must be preceded or accompanied by Phys. 45. Three hours credit. Each semester.

5. Chemical Technology of the Organic Industries. A descriptive study of the processes and manufacturing methods used in the more important industries based on organic chemical technology. Three lectures and two recitations. Prerequisites: Chem. Eng. 4 and Chem. 67E; preceded or accompanied by Chem. 69E. Four hours credit. Each semester.

10. The Utilization of Fuels. A course designed especially for mechanical engineering students, covering in a limited way the material offered in Chem. Eng. 2. Laboratory work. Prerequisites: Chem. Eng. 1. Must be preceded or accompanied by Phys. 45, and accompanied by Mech. Eng. 7. One hour credit. Each semester.

12. Special Problems. The purpose of this course is to train the student in methods of independent research. Each student is, after consultation, assigned a subject connected with some manufacturing
process which he is to study intensely both in the library and laboratory. Wide latitude is allowed in the choice of a subject, and the student is, so far as possible, urged to select one that interests him most. Laboratory work and reports. **Prerequisites:** Chem. Eng. 4 and such other courses as are essential to a knowledge of the subject selected. Three to five hours credit. Each semester.

20. **Summer Work in Factories.** Credit is given for a report on some phase of work in a factory. Application must be made for registration in this course and the nature of the problem must be approved before entering upon the work. One hour credit.

21. **Design Problem.** The American Institute of Chemical Engineers holds an annual competition for the solution of a problem open to all members of student chapters of the Institute. A credit of one hour will be granted to any student who submits a solution of this problem which is satisfactory to the local committee.

24. **Testing Petroleum Products.** Laboratory work. **Prerequisite:** Chem. Eng. 2. One hour credit. Second semester.

29. **Chemical Engineering Laboratory.** A laboratory study of the unit operations of chemical engineering, comprising a series of performance tests on various types of chemical engineering equipment. One recitation and one four-hour laboratory period. **Must be preceded or accompanied by Chem. Eng. 9b.** Two hours credit. Each semester.

102. **Heat and Material Balances.** Problems illustrating the application of the method of heat and material balances to chemical and manufacturing processes. Two recitations. **Prerequisite:** Chem. Eng. 4. Two hours credit. First semester.

105. **Chemical Engineering Thermodynamics.** A study of the principles of the three fundamental laws of energy as applied to chemical and metallurgical engineering problems. Two lectures and two recitations. **Open to graduates, and to seniors who receive special permission. Prerequisites:** Chem. Eng. 2, Chem. 45, and Math. 38. Three hours credit. First semester.

109. **Research Seminar.** Discussion of research of staff and graduate students. **Required of all applicants and candidates for the doctorate, and open to all graduate students. No credit.** Each semester.

110. **Special Problems.** A continuation of Course 12. Laboratory work. **Open to graduates, and to seniors who receive special permission.** Three to five hours credit. Each semester.

113. **Fluid Flow, Heat Flow, and Evaporation.** An advanced study of the fundamental theory of these processes and of the equip-
ment for their operation. Lectures and recitations. Prerequisites: Chem. Eng. 4 and 9a. Two hours credit. Second semester.

115. Drying, Distillation, Extraction, and Gas Absorption. An advanced study of the fundamental theory of these processes and of the equipment for their operation. Lectures and recitations. Prerequisites: Chem. Eng. 4 and 9b. Two hours credit. Second semester.

116. Evaporation. Research work on the design of evaporators and on problems connected with handling of liquids on the commercial scale. Laboratory work and conferences. Open to graduates, and to seniors who receive special permission. Three to five hours credit. Each semester.

117. Distillation. Research work on the theory, design, and performance of distillation equipment. Laboratory work and conferences. Open to graduates, and to seniors who receive special permission. Three to five hours credit. Each semester.

118. Crystallization. Research work on the theory and practice of industrial crystallization. Laboratory work and conferences. Open to graduates, and to seniors who receive special permission. Three to five hours credit. Each semester.

121. Design of Chemical Machinery. The student selects some piece of chemical machinery and makes a complete set of drawings that would be required for its actual construction. Conferences and drafting. Prerequisites: Chem. Eng. 9b and a course in machine design. Two hours credit. Each semester.

153. Motor Fuels and Lubricants. A study from the user's standpoint. Open only to graduates, and to seniors who receive special permission. One hour credit. Second semester.

156. Gas. Research relating to the manufacture, properties, and uses of coal gas, water gas, oil gas, and producer gas. Laboratory work and conferences. Open to graduates, and to seniors who receive special permission. Three to five hours credit. Each semester.

157. Petroleum and Motor Fuels. Research work on problems connected with the production and utilization of petroleum products. Laboratory work and conferences. Open to graduates, and to seniors who receive special permission. Three to five hours credit. Each semester.

158. Refractories. Research work on the thermal and physical properties of refractory materials, combustion, and heat transfer at high temperatures. Laboratory work and conferences. Open to graduates, and to seniors who receive special permission. Three to five hours credit. Each semester.
166. **Hydraulic Cements.** Research work on the properties of hydraulic cements as influenced by chemical composition and temperature of burning; also studies of constancy of volume and permanence of concrete structures. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

167. **Advanced Electrochemistry.** Research relating to electrodeposition and electrochemical processes. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

171. **Explosives.** A study of the processes used in the manufacture of commercial and military explosives and pyrotechnic materials; their properties and uses. Lectures and recitations. *Prerequisite: Chem. Eng. 5.* Four hours credit. Second semester.

172. **Pulp and Paper.** A study of the processes used in the manufacture of pulp and paper; their properties and uses. Lectures and recitations. *Prerequisite: Chem. Eng. 9a.* Two hours credit. Second semester.

176. **Paint, Varnish, and Pyroxylin Lacquers.** Research relating to the manufacture, properties, and uses of paints, varnish, pyroxylin lacquers, and plastics. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

177. **Paper Manufacture.** Research work connected with the properties of paper pulp and paper-making materials. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

205. **Applied Thermodynamics.** An advanced analytical study of chemical engineering processes from the standpoint of quantitative thermodynamics and physical chemistry. A continuation of Course 105. Lectures and recitations. Two hours credit. Second semester.

211. **Design of Chemical Plants.** A simple chemical process is selected, and the student proceeds to plan the steps in the process
and select the type of apparatus for each. Prerequisites: Chem. Eng. 113; preceded or accompanied by Chem. Eng. 114 and 115, and a course in machine design. Three hours credit. Each semester.

212. Seminar in Heat Transfer. Conferences and problems in heat transfer. Open to graduates, and to seniors who receive special permission. Two hours credit. Second semester.

251. Natural Gasoline and Compressed Gases. A study of the processes and design of engineering equipment used in the manufacture of petroleum products and natural gasoline. Lectures and recitations. Prerequisites: Chem. Eng. 5 and 9b. Three hours credit. First semester.

252. Petroleum Refinery Engineering. A discussion of special problems and modern developments in the petroleum industry. Open to graduates who have completed Chem. Eng. 105 or are actively engaged in research in this field. Two hours credit. Second semester.

METALLURGICAL ENGINEERING

3. Structure and Properties of Metals. A microscopic study of the structure of metals as affected by composition and by thermal and mechanical treatment; the relation of these to the physical properties of metals; consideration of the factors that determine or limit the uses of metals and common alloys. Two lectures, one recitation, and one three-hour laboratory period. Prerequisites: Chem. Eng. 1. Must be preceded or accompanied by Phys. 46. Three hours credit. Each semester.

6. Metallurgical Principles. An introduction to the principles and processes involved in the extraction of metals from their ores and the synthesis of alloys. This includes study of fuels and refractories as used in these processes and a consideration of slag constitution and measurement of high temperatures. Recitations and laboratory. Prerequisites: Chem. Eng. 1 and Phys. 46. Three hours credit. First semester.

8. Physical Metallurgy. Thermal and mechanical properties of metals as related to macro and microstructure. Lecture, or quiz, and laboratory. Prerequisite: Met. Eng. 3a or 3. Two hours credit. First semester.
12. Special Problems. The purpose of this course is to train the student in methods of independent research. Each student is, after consultation, assigned a subject connected with some manufacturing process which he is to study intensively both in the library and laboratory. Wide latitude is allowed in the choice of a subject, and the student is, so far as possible, urged to select one that interests him most. Laboratory work and reports. Prerequisites: Met. Eng. 3a or 3 and such courses as are essential to knowledge of the subject selected. Five hours credit. Each semester.

20. Summer Work in Factories. Credit is given for a report on some phase of work in a factory. Application must be made for registration in this course and the nature of the problem must be approved before entering upon the work. One hour credit.

109. Research Seminar. Discussion of research of staff and graduate students. Required of all applicants and candidates for the doctorate, and open to all graduate students. No credit. Each semester.

110. Special Problems. A continuation of Course 12. Laboratory work. Open to graduates and to seniors who receive special permission. Three to five hours credit. Each semester.

114. Crushing, Classification, Filtration, Calcination, and Conveying. An advanced study of the fundamental theory of these processes and of the equipment for their operation. Lectures and recitations. Prerequisites: Met. Eng. 3 or 3a and 9b. Two hours credit. First semester.

141. Metallurgy of Iron and Steel. A critical study of the metallurgy of the ferrous metals; raw materials, the production of pig iron; the manufacture of steel, wrought iron, cast iron, and malleable iron. Two lectures and one recitation. Prerequisites: Chem. Eng. 2, Met. Eng. 3 or 3a, and Met. Eng. 6. Two hours credit. First semester.

143. Metallography of the Nonferrous Metals. An advanced study of the microscopic structure of the common nonferrous metals and alloys, and of the effect of heat treatment, mechanical work, and composition on their structure and properties. One lecture and one laboratory period. Prerequisites: Met. Eng. 3 or 3a and a course in physical chemistry. Two hours credit. Second semester.
144. **X-ray Studies of Engineering Materials.** Lectures and assigned work. *Prerequisites: advanced mathematics and physics as well as the necessary courses in metallurgical or chemical engineering.* Three hours credit. First semester.

145. **Advanced Ferrous Metallurgy.** A study of the constitution of irons and steels and the effect on their properties of composition, heat treatment, and mechanical work. Lectures and recitations. *Prerequisites: Chem. Eng. 3 and 3a.* Two hours credit. Second semester.

146. **Advanced Ferrous Metallurgy.** Research work on the structures and properties of iron and steel. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

147. **Advanced Nonferrous Metallurgy.** Research work on structures and properties of nonferrous metals and alloys. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

148. **X-ray Studies.** Research work in the application of x-rays to the structure and properties of materials. Laboratory work and conferences. *Open to graduates, and to seniors who receive special permission.* Three to five hours credit. Each semester.

151. **Furnace Design and Construction.** A study and application of the principles of furnace design; and the properties of refractory materials, and their use in furnace construction. One lecture, one recitation, and one laboratory period. *Prerequisites: Chem. Eng. 2 and 9a or Mech. Eng. 5.* Two hours credit. Second semester.

152. **Pyrometry and Furnace Control.** A study of the theory, construction, calibration, and use of commercial pyrometers; the methods of thermal analysis, and the various means of temperature control in furnaces. One recitation and one laboratory period. *Prerequisites: Chem. Eng. 2 and Phys. 46.* Two hours credit. Second semester.

241. **Physical Metallurgy.** An advanced study of the theory and principles fundamental to the mechanical and thermal treatment of metals and alloys. *Open only to graduates.* Two hours credit. First semester.

243. **Metals at Elevated Temperatures.** Reading and reports on principles and theories as related to utilization. *Open only to graduates.* Two hours credit. Each semester.

248. Advanced X-ray Studies. Research work in the application of x-rays to the structure and properties of materials. Laboratory work and conferences. Prerequisite: Met. Eng. 144. Three to five hours credit. Each semester.

249. High Temperature Reactions. Laboratory work and conferences. Laboratory technique at high temperatures including vacuum melting of metals, determination of gases in steels, special refractories, and equilibrium in chemical reactions. Prerequisite: Chem. Eng. 105. Three to five hours credit. Each semester.

Summer Session

Courses 1, 3, 5, 9a, 12, 29, 110, 113, 114, 116, 146, 156, 166, and 176, or similar courses, will be given during the Summer Season.

75. CIVIL ENGINEERING

Professors Riggs,* Gram, King, Hoad, Decker, Worley, Cissel, Morrison, Wisler, and Sherlock; Associate Professors Emmons and W. C. Sadler; Assistant Professors Alt, Housel, Maugh, and Jakkula; Mr. Boyd.

Civil engineering is divided into groups which correspond to the specialties of practicing civil engineers. Since these divisions have come about gradually through the requirements of actual practice, it is inevitable that there should be considerable overlapping of the various fields. The competent civil engineer must have a broad understanding of the scientific principles underlying all of the groups, as well as a high degree of skill in applying these principles to the specialized problems of his own group.

While the training of the civil engineer is essentially technical, it is not always as a technician that he achieves his greatest usefulness. It has come to be quite generally recognized that the habits of thought developed by the practicing civil engineer fit him admirably for administrative and executive positions. This is especially true in the constantly expanding transportation field, in municipal and public affairs, and in many industrial and commercial fields, where a background of technical training and experience in planning and executing important work is a valuable aid to the administrator. Many graduate civil engineers are successfully engaged in highway, railroad, municipal, or building contracting.

* Honorary Professor of Civil Engineering.
The main divisions of civil engineering are as follows:

**Structural Engineering**, which deals with the theory, design, and construction of structures such as bridges, buildings, dams, retaining walls, etc., involving the use of steel, masonry (including reinforced concrete), and timber.

**Hydraulic Engineering**, which takes up the control and use of water, including irrigation, drainage, water power, and navigable rivers and harbors, and deals with the measurement of water and the design and construction of dams, locks, wharves, irrigation works, and all other forms of hydraulic structures.

**Transportation Engineering**, which deals with railroads, highways, waterways, and other forms of transportation; location, design and construction, maintenance, operation, and also the history and economics of transportation systems. The curriculum is designed to train students in the broader aspects of the profession as a foundation for executive positions. The Transportation Library contains over 100,000 items and offers unusual opportunity for research and advanced study.

**Sanitary Engineering**, which deals with the design, construction, and operation of waterworks, sewers, water purification and sewage disposal works, and with all matters related to public sanitation. It offers many opportunities for advanced work and research along the line of prevention of disease by the proper construction and operation of engineering structures.

**Municipal Engineering**, which deals with the design, construction and maintenance of paving, sewers, sidewalks, street drainage, waterworks, and other municipal public works, the laws controlling their construction and operation, the proper design and laying out of cities and villages, and the construction and regulation of street railways and other utilities.

The Department of Civil Engineering has endeavored through conferences with successful alumni, and with prominent men in industry and public affairs, to arrange the details of the course of training so that graduates will be prepared not only for civil engineering practice but with an active interest in social and public service.

The student is required to elect such courses in mathematics and in the general sciences as are necessary to a proper understanding of the technical and nontechnical courses which follow. He is also required to elect courses in mechanical, electrical, and chemical engineering, since narrow specialization by undergraduates is discouraged. It is felt that with this background, the graduate can augment his technical knowledge as circumstances require, either
by graduate work in the University or by independent study while in practice.

As a part of his nontechnical work, the student is required to take a minimum number of hours in English and economics, supplemented by other elections. He is not only permitted but is distinctly encouraged to choose his nontechnical electives consistent with the general technical group which he adopts. The Department desires to give every possible opportunity to the development of individual capacities.

The Department does not guarantee employment to graduates, but the demand from employers usually exceeds the supply, so that graduates have little trouble in finding lucrative positions in which to obtain their early years of experience.

Major Electives.—As early as practicable, the student should select that division of civil engineering in which he may have a major interest, and should confer with the professor in charge of the division relative to the completion of his program. The main divisions of civil engineering are described hereafter.

Before the end of the junior year, the student must definitely determine his major electives as required by the curriculum. These electives must be acceptable to the professor in charge of the division, and approved by the Head of the Civil Engineering Department, before the student may be classified as a senior. It is expected that the major electives will include work in nontechnical subjects cognate to a chosen field as well as in the technical and professional courses which are deemed essential.

Elections in military science (advanced group) to the extent of eight hours are accepted in Curriculum A as major electives in all divisions of civil engineering.

Cooperative courses as listed are considered as major electives in fulfilling the requirements of the curriculum.

Graduate Work leading to advanced degrees is offered to graduates whose records indicate that they can pursue it profitably. Conditions under which such work may be undertaken are described in the General Announcement of the Graduate School of the University.

Fellowships of interest to students in civil engineering are described in section 44.

The Transportation Library offers unusual opportunities for research. It contains many rare books and pamphlets relating to the origin, history, and development of the various transportation systems. It also contains very complete files of Interstate Commerce Commission statistics, proceedings of the various engineering associations, the modern and current periodicals dealing with railways, highways, waterways, and other engineering subjects; state and
national, railway, public utility, highway, and special commission reports; annual reports of railways and other transportation companies, proceedings of various transportation associations, and the latest books on the technical and economic phases of transportation.

Highway Laboratories.—Through a coöperative arrangement between the University and the State Highway Department, the testing of materials for use in state highways and bridges is done at the University. The work of the State is, in general, done in the rooms used for student work, so that students secure the benefits to be derived from observing the work of trained State employees.

The Highway Laboratory is located in the basement of the north wing of the East Engineering Building. It has about 15,000 square feet of floor space divided between five main laboratories for the testing of cement, concrete, sand, gravel, rock, paving brick, and similar materials; asphalts, tars, oils, and bituminous mixtures; calcium chloride, metals and paints, culvert pipe, and soils. The laboratories also contain a large freezing chamber where temperatures as low as —40°F may be obtained, rooms for concrete curing, equipment, sample storage, lockers, and showers.

The laboratories are equipped with all of the necessary apparatus for the routine testing of all kinds of bituminous and nonbituminous materials. In addition, it possesses considerable special equipment for research. Among the more important pieces of apparatus are the Deval abrasion machine, standard brick rattler, 200,000-pound compression testing machine, tensile testing machines, moist closets, weatherometer, stability and bearing capacity machines, bituminous extractors, concrete mixers, viscosimeters, electric ovens, and constant temperature baths.

Hydraulic Experimental Equipment.—A flume in the West Engineering Building provides for inside laboratory experiments on the measurement of flowing water in quantities up to 12 cubic feet per second. The flume is 50 feet long, 2 feet wide, and 4 feet deep. Water is supplied by a 16-inch centrifugal pump driven by a 100-horsepower motor. Accurate measurement of discharge is provided by scales and weighing tanks with a total capacity of 100,000 pounds. A 90° V-notch weir calibrated by means of the weighing tanks is also available for measurement of flow. Space is available in the laboratory for investigation of special hydraulic problems.

Surveying Camp.—Course 3 in surveying, offered each summer at Camp Davis, is open to students who have completed Courses 1 and 2 in that subject. Camp Davis is located in the Jackson’s Hole country, Wyoming, about 75 miles south of Yellowstone National Park. It is recommended that, wherever practicable, students in civil engineering avail themselves of the many unique advantages of the life and training at this camp.
Combined Courses have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.

Advice to Students of other colleges and universities, with regard to planning their courses before coming to the University, is to be found in section 14.

Military Science.—The attention of prospective students in civil engineering is called to the Reserve Officers' Training Corps. Those who consider taking military science are urged to enroll at the beginning of their course. For further details see section 66.

CURRICULUM IN CIVIL ENGINEERING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Civil Engineering) are required to complete either Curriculum A or Curriculum B, as detailed on this and the following pages of this Announcement. For the definition of an hour of credit see section 50.

*Major Electives.*—The student will take one of the following groups of subjects plus nine credit hours of work in cognate fields. Elections or necessary substitutions must be approved by the Head of the Department.—**Railroad:** Civil Eng. 27, 51, 52, 52a; **Aeronautical:** Aero. Eng. 1, 2, 3, 5, 7, 16; **Highway:** Civil Eng. 42a, 44, 45, 46; **Automotive:** Mech. Eng. 30, 30a, 32; **Electrical:** Elec. Eng. 3, 4; **Marine:** Naval Arch. 2, 4, 5T, 13.

† If modern language is elected, it may be classified here and the English postponed. See Section 51.
‡ See note section 56.
§ Physical education twice a week throughout the year (without credit in hours) is required of all first-year students, unless military science (one hour credit each semester) is elected as a substitute. Enrollment in military science is for a period of four semesters.

Graduate Students in Civil Engineering may specialize in any of the divisions of the Department. Such students will ordinarily be required to complete at least eight hours of work in that division. Additional work sufficient to complete the requirements for the M.S. degree may be selected from cognate subjects.
COURSES IN CIVIL ENGINEERING

The courses described below are identified by letters and course numbers. Thus, Civil Engineering, Course 2, is identified as Civil Eng. 2. Also Civil Eng. 65, etc., etc.

Structural Group, Civil Eng. 1 to Civil Eng. 9.
Hydraulic Group, Civil Eng. 10 to Civil Eng. 19.
Sanitary and Municipal Group, Civil Eng. 30 to Civil Eng. 39.
Transportation Group, Civil Eng. 40 to Civil Eng. 58.
Graduate Group, Civil Eng. 60 to Civil Eng. 67.

4. Advanced Theory of Structures. Analysis of stresses and deflection in special types of structures, cantilever trusses, draw spans, and arches. This is a continuation of Civil Eng. 2. Lectures, texts, problems. Prerequisite: Civil Eng. 2. Two hours credit. Each semester.

5. Design of Structures. Design work covering general design of reinforced concrete and steel structures; foundations. Computations, drawing work. Prerequisites: Civil Eng. 2a and 3. Three hours credit. Each semester.

6. Applied Soil Mechanics. A study of engineering problems which involve the use of soil as a material; theory of soil resistance; pressure distribution; determination of physical properties of soil, including bearing capacity; theory of plastic flow applied to foundations; design of substructures, pile foundations, and underground structures; earth pressure theories and application to deep excavation; recent development in soil research. Lectures and references. Prerequisite: Civil Eng. 3. Three hours credit. Each semester.

7. Advanced Design of Structures. A group of optional specialized courses as listed below for students desiring advanced and specialized instruction in the design of various classes of struc-
CIVIL ENGINEERING

7a. Bridge Engineering. Studies in the selection of the proper bridge structure for a given location; economics of bridge types; selection and construction of piers; determination of waterways; erection methods. Prerequisites: Courses 4 and 5. Two hours credit. Each semester.

7b. Reinforced Concrete. Reinforced concrete building design; drafting room practice in the general design and detailing of reinforced concrete. Lectures, drawing work. Prerequisite: Civil Eng. 5. Three hours credit. Each semester.

7c. Arches. Analysis of stresses and design of arches, especially reinforced concrete arches. Lectures, drawing work. Prerequisite: Civil Eng. 3. Three hours credit. Each semester.

7d. Timber Construction. Physical characteristics of structural woods; selection of timber sizes; grading rules; commercial practice; design of typical structures. Lectures, drawing work. Prerequisite: Civil Eng. 2a. One hour credit. Each semester.

7e. Wind Pressures. Meteorology of air movements and origin of gusts; aerodynamics of engineering structures; laws of similarity of models; intensity and distribution of wind pressures on different types of structures. References, problems, seminar. Prerequisite: Course 2. Two hours credit. Each semester.

7f. Short-Span Suspension Bridges. Analysis and design of suspension bridges by methods which neglect the effect of the changes in dimensions produced by live load and temperature. Lectures and assigned problems. Prerequisite: Civil Eng. 4 or Eng. Mech. 9. Two hours credit. Each semester.

7g. Long-Span Suspension Bridges. Analysis of suspension bridges by exact methods. Application of Fourier's series. Stiffening trusses, simple and continuous, with constant and variable moment of inertia. Lectures and individual problems. Prerequisite: Civil Eng. 7f. Two hours credit. Each semester.

7h. Rigid-Frame Structures. Analysis of rigid frames by methods of successive approximations and slope deflections; application of methods to various types of buildings, bridges, and viaducts; consideration of special problems involved in the design of continuous frames. Lectures, references, problems. Prerequisite: Course 4. Credit to be arranged. Each semester.
7i. Testing of Structural Models. The mechanical analysis of stresses in statically indeterminate structures by means of models. The use of the Begg's apparatus in analyzing complicated structures will be given particular attention. Students will be required to make the models and the necessary observations and calculations. Prerequisite: Course 4 or Eng. Mech. 9. Two hours credit. Each semester.

7j. Foundations and Underground Structures. Design of substructures to meet various soil conditions; investigation of overloaded foundations; earth pressure in the deep underground; excavation problems; tunnel construction, including soil properties affecting design, critical diameter of tunnels and shafts, construction by use of compressed air, shield method, subsidence and some legal aspects of damage due to subsurface construction; laboratory tests of soil properties; stability of materials used in highway construction. Prerequisite: Course 6. Credit to be arranged. Each semester.

8. Construction Methods and Equipment. Deals with contractors' organizations, laws of management, plant selection, and layout; catalog studies of various types of equipment, their operating characteristics and care; standard methods of construction. Lectures, class discussion. Open to seniors and graduates. Two hours credit. First semester.

10. Hydrology. A study of natural streams; measurement of stream discharge; continuous discharge records; factors affecting precipitation; evaporation from land and water surface; relation of precipitation to stream flow; estimating stream flow; storage of water; floods. Two recitations and one three-hour laboratory period. Prerequisite: Eng. Mech. 4. Open to seniors and graduates. Three hours credit. Each semester.

12. Water Power Engineering. History of science; hydraulic and hydrological studies; power output of streams; hydraulics of turbines; selection of turbines, power plant layout and equipment; economic considerations; engineering reports on water power developments. Lectures, recitations, problems. Prerequisite: Eng. Mech. 4. Open only to seniors and graduates. Two hours credit. Each semester.
13. Administration of Water Resources. Progress made by India, Egypt, Italy, France, and Spain; development of common law doctrines relating to waters, and their introduction into the United States; a few leading decisions; the abrogation of the common law rule in the arid region; an engineering administration, based on principles, contrasted with court government under the common law doctrine; examples of water administrations in western states. Lectures, assigned reading, reports. Prerequisite: Eng. Mech. 4. Open to seniors and graduates. Three hours credit. Each semester.

15. Hydraulic Models. A study of the use of hydraulic models for the advance determination of the performance of hydraulic structures; interpretation and reliability of results; principles of dimensional analysis and hydraulic similitude and applications to hydraulic problems. Open to advanced seniors and graduate students. Two hours credit.

16. Hydraulic Engineering Design. Description of hydraulic structures; hydraulic and structural computations; design of hydraulic structures; water conveyance structures; dams; power houses; head gates; wasteways; regulating works. Lectures, computations, design. Prerequisites: Civil Eng. 3, and preceded or accompanied by Civil Eng. 11. Three hours credit. Second semester.

26. Specifications, Contracts, and Engineering Relations. Engineering relations; ethics; the engineer as a witness; contracts; bids and bidders; public lettings; methods of payment for contract and extra work; specifications. Lectures, reading, discussion. Open to juniors, seniors, and graduates in engineering and in business administration. Two hours credit. Each semester.

27. Public Utility Problems. Relation of public service corporations to the public; organization; ownership; valuation; depreciation; accounting; regulation; taxation; rates; problems of different utilities. Lectures, library reading. Open to fourth- and fifth-year students. Two hours credit. Each semester.
30. **Water Works.** A general study of municipal water supply. Quantity required and quality necessary for various purposes; public health relationships; sources of supply; impounding reservoirs; wells, intakes; aqueducts and pipe lines; purification works; distribution; fire protection. Lectures, problems. **Prerequisite:** Eng. Mech. 4. **Open to seniors and graduates.** Three hours credit. Each semester.

31. **Water Purification.** Relates to engineering methods and devices for improving the sanitary quality and economic value of municipal water supplies; processes of sedimentation; use of coagulants; filtration; softening; iron removal; sterilization; devices and structures for accomplishing these. Lectures, library reading, and visits to municipal water purification plants. **Prerequisite:** Civil Eng. 30. **Open to seniors and graduates.** Two hours credit. Second semester.

32. **Sewerage and Drainage.** Functions and purposes of sewerage and drainage systems; health relationships; principles of design of sanitary, storm water, and combined sewers; trunk sewers, intercepting sewers, inverted siphons, and other special structures; groundwater infiltration and its effects; sewer assessments; proper treatment and final disposal of sewage. Lectures, problems. **Prerequisite:** Eng. Mech. 4. **Open to seniors and graduates.** Two hours credit. Each semester.

33. **Sewage Disposal.** A broad survey of the engineering, public health, legal, and economic problems involved in the disposal of city sewage and industrial wastes. Sewage treatment processes and devices; adaptation to climatic and other natural conditions; operation and maintenance; costs. Lectures, library reading, and visits to nearby disposal plants. **Prerequisite:** Civil Eng. 32. **Open to seniors and graduates.** Two hours credit. Second semester.

34. **Municipal and Industrial Sanitation.** The scientific foundations of public sanitation; the prevention of typhoid fever, malaria, and other diseases, and the betterment of living conditions through water purification, sewerage and drainage, and other major sanitary improvements involving community control of the environment; the collection, utilization, and disposal of garbage and other city wastes; street cleaning methods, organization, and management; and industrial sanitation. Lectures, library reading. **Open to seniors and graduates.** Three hours credit. Each semester.

35. **Sanitary Engineering Design.** Computations and drawing board design of pipe lines, large conduits, typical structures in reinforced concrete related to water supply, water purification, sewerage, and sewage disposal. Drawing room and visits to plants and work under construction. **Prerequisites:** Civil Eng. 3, and accom-
panied or preceded by either Civil Eng. 31, 33, or 34. Three hours credit. Each semester.

36. Public Water Supply. A course dealing with some of the broader aspects of public water supply, such as the conservation and protection of sources of supply, the characteristics of waters from different sources, accepted water-supply standards—both as to quality and quantity—health relationships, industrial water supply, purposes and results of water purification, legal rights and responsibilities of public water-supply departments, and water-works administration. Text, lectures, library reading. Open to seniors and graduates. Three hours credit. Each semester.

40. Highway Engineering. Historical development; economics, administration, and legislation; preliminary investigations; design of road and street systems and the individual highway; drainage and foundations; highway materials; construction and maintenance of roads and pavements; street cleaning and snow removal; highway structures. Lectures, text. Open to juniors, seniors, and graduates. Not restricted to engineering students. Two hours credit. Each semester.

41. Advanced Highway Engineering. Location, subgrades and foundations, grading and drainage, highway surfaces; construction and maintenance procedures, equipment; comparison and selection of types as affected by physical and economic considerations. Lectures, text, review of current literature. Prerequisite: Civil Eng. 40. Open to juniors, seniors, and graduates. Two hours credit. Second semester.

42. Civil Engineering Laboratory. A group of laboratory courses, as listed below, for students desiring to study the physical properties of materials used in civil engineering construction.

42a. Highway Materials Laboratory. Physical properties of highway materials; testing of sand, gravel, rock, slag, cement, aggregates, cement-concrete, brick, wood block, stone block, and bituminous materials; proper method of reporting and interpreting results of tests. Lectures, text, laboratory. Prerequisite or accompanying course: Civil Eng. 40. Open to juniors, seniors, and graduates. Two hours credit. Each semester.

42b. Bituminous Materials Laboratory. Properties of bituminous materials; testing of oils, asphalts and tars; theory and design of bituminous paving mixtures; interpretation of results of tests; specifications. Lectures, text, laboratory. Prerequisite: Civil Eng. 40. Open to juniors, seniors, and graduates. Two hours credit. Each semester.
42c. Concrete Mixtures. Theory and design of concrete mixtures; analysis of aggregate grading; bulking due to moisture; strength, permeability, durability, yield, and economy. Discussions, problems, laboratory. One hour credit. Each semester.

44. Highway Transport. History of highway transport development; economics and fundamentals of different methods of transportation of passengers and commodities over highways; utilization of highway transport by railroads; legislation pertaining to operation of motor trucks, trailers, and motor busses as private and common carriers; traffic regulations; management of transportation companies; cost of operation of motor vehicles. Open to seniors and graduates. Not restricted to engineering students. Two hours credit. Each semester.

45. Highway Traffic Control. Causes of congestion; causes of accidents; physical changes to increase street capacity; regulation of moving traffic; regulation of parking; regulation of pedestrians; traffic signs and signals; municipal traffic codes; traffic bureaus; treatment of offenders. Lectures, text, field work, library reading. Open to seniors and graduates. Not restricted to engineering students. Two hours credit. Second semester.

46. Highway Administration. Development of highway administration and highway systems, local, county, state, and national; methods of financing roads and streets; functions and organization of highway departments. Lectures, text, library reading. Open to seniors and graduates. Not restricted to engineering students. Two hours credit. First semester.

47. Highway Traffic Surveys. A study of traffic on city streets, in metropolitan regions, counties, states, and groups of states for purposes of traffic control or the formation of sound programs of highway improvement. The students conduct the various operations of a complete traffic survey. Lectures, assigned reading, and field work. It is desirable that this course be preceded or accompanied by Civil Eng. 45. Open to seniors and graduates. Two hours credit. Each semester.

50. Railroad Engineering. A general study of the railroad problem. Includes a consideration of surveys, alignment, earthwork, trestles, structures, tunnels, ballast, ties, rails, rolling stock, train resistance, block signals, train control, yards and terminals, operating expenses and organization. Lectures, text, problems. Open to juniors and seniors, but not restricted to engineering students. Two hours credit. Each semester.

51. Economics of Railroad Construction and Operation. Statistical analysis of operating expenses. A general study of curve, grade, and train resistances, ruling grades, rise and fall, and virtual
profiles. Study of line changes, grade reductions, and elimination of grade crossings. Lectures, text, problems. *Open to juniors, seniors, and graduates.* Two hours credit. Each semester.

52. Railroad Maintenance. Maintenance of roadway, track, track appliances, switches and fogs, bridges, structures, culverts and drainage, signals and interlocking plants. Lectures, text, problems. *Open to juniors, seniors, and graduates.* Two hours credit. First semester.

52a. Heavy Excavation and Tunnel Work. Study of the methods and machinery applicable to all types of heavy excavation. Construction practices in the use of tunnel shields, lining, ventilation, drilling, and high explosives. Lectures, text, problems. *Open to juniors, seniors, and graduates.* Two hours credit. Second semester.

53. Terminal Design. Design of railroad, highway, waterway, and airport terminals, joint terminals, layout of the various types of yards, and traffic facilities. Opportunity is offered for specialized design of the following: port development, bus and truck terminals, airports, or general railroad terminals. Text, problems, drawing room. *Open to juniors, seniors, and graduates.* Three hours credit. Each semester.

55. Transportation. History of transportation; relation of highway, waterway, railway, and airway transportation. Lectures, library research, seminar. *Open to juniors, seniors, and graduates, but not restricted to engineering students.* Two hours credit. First semester.

55a. Transportation. The relation of transportation to the political and economical development of the nation. Lectures, library research, seminar. *Open to juniors, seniors, and graduates, but not restricted to engineering students.* Two hours credit. Second semester.

58. Inland Waterway Transportation. Engineering and economic problems involved in the development of American inland waterway transportation. Lectures, library reading, recitations. *Open to juniors, seniors, and graduates, but not restricted to engineering students.* Two hours credit. First semester.

60. Sanitary Engineering Research. Assigned work upon some definite problem related to public sanitation; a wide range in
both subject matter and method is available, covering field inves-

tigations, experimentation in the laboratory, searches in the library

and among public records, and drafting room designing. By ap-

pointment. Open to graduates only. Credit to be arranged. Each

semester.

63. Civil Engineering Research. Assigned work in the fields

of transportation, public utilities, or engineering relations and ethics.

Exact nature of work to be determined by needs of individual

students. To obtain credit a thesis must be prepared which would

be acceptable for publication. Open only to graduates. Credit to

be arranged. Each semester.

64. Hydraulic Engineering Research. Assigned work in hy-

draulic research; investigation of some problem or subject in hy-

draulics approved by the Professor of Hydraulic Engineering; a

wide range of matter and method permissible. Reading, experiments,

thesis. Prerequisite: Civil Eng. 11. Open only to graduates. Credit

to be arranged. Each semester.

65. Structural Engineering Research. Assigned work on

some problem in structural engineering, as approved by the Pro-

cessor of Structural Engineering. A wide range of subject matter

is available, including laboratory and library studies. An acceptable

thesis is required. Open to graduates. Credit to be arranged. Each

semester.

65a. Seminar in Advanced Theory of Structures. Study of

special problems in theory of structures. Open to qualified graduates.

Credit to be arranged. Each semester.

66. Highway Engineering and Highway Transport Re-

search. Assigned work in the fields of highway engineering, high-

way transport, or highway traffic control. Exact nature of work to

determine by needs of individual students. To obtain credit a thesis

must be prepared which would be acceptable for publication. Open

only to graduates. Credit to be arranged. Each semester.

67. Railroad Engineering Research. Assigned work in the

field of railroad engineering. Exact nature of work to be determined

by needs of individual students. To obtain credit a thesis must be

prepared which would be acceptable for publication. Open only to

graduates. Credit to be arranged. Each semester.

Summer Session

Courses 2, 7a, 7c, 7d, 7f, 7g, 7h, 7i, 20, 26, 30s, 34s, 40, 45, 53,

63, 65, and 66, or similar courses, will be given during the Summer

Session.
Electrical engineers practice in a field of great breadth; any true subdivision of it is very difficult. The main divisions of practice, and work offered by the Department in relation thereto, are as follows:

**Electrical Power Engineering** has to do with the theoretical and practical phases of power generation, distribution, and utilization, together with the design and construction of the apparatus involved; among other specific applications it relates to electric railways, lighting, power plants, transmission, distribution, generators, motors, and the service of the public. The almost phenomenal growth of the electric public utilities and the corresponding use of electricity indicate the opportunities existing in this branch.

**Electrical Communication** deals with the transmission of signals, speech, music, and pictures by open wire lines, by cable, and by radio. The engineer practicing in this field utilizes greater extremes in magnitudes of time, distance, power, and efficiency than in any other branch of engineering. A well-balanced course in communication engineering must lay stress on general principles, whether electrical, mechanical, or economic. Premature specialization is to be avoided and a thorough groundwork in electrical engineering in its broadest sense to be obtained. This, followed by specialized courses in radio, telegraphy, and telephony taken in the senior year and, if possible, a graduate year, gives the student excellent preparation for the communication field and strengthens him for work in other fields by virtue of his broadened perspective.

**Illumination Engineering** is now an electrical activity because nearly all light sources are electrical. The illumination engineer deals with the many and varied special problems arising in relation to the production and utilization of light, economically and in accordance with correct principles of physics, physiology, psychology, art, and architecture.

The purpose of the work available to the undergraduate is to indicate the scope, present and prospective importance, and attractiveness of illumination as a field of professional activity, and to establish firmly by thorough drill the principles upon which progress must be founded.

**Electrical Engineering Design.** As every unit of apparatus produced must first be designed, design practice affects most phases of electrical engineering in one way or another. Design itself may mean designing the unit to be built, or may mean selecting units
already made and assembling them in economic fashion to create a workable and efficient layout. Design involves the use of fundamental theory as modified by practical considerations of cost, properties of materials, and the selection of methods.

The courses of the design group are not in any sense intended to turn out finished designers. Rather, by using the background offered by design problems, they give an opportunity to clarify the student's knowledge of apparatus, and their training in diverse methods of attack is of value irrespective of the field of engineering the student may later enter.

To an increasing extent, nearly all electrical engineers are concerned with heat problems; the introductory work of Course 5, and the advanced work of Course 52, offer a training in heat transfer and temperature rise which is probably not duplicated in electrical engineering curricula.

**Electrical Theory and Laboratory Technique** constitute a division of work in the Department that is of growing importance in the field. The rapid development of electrical engineering and its relation to many applications of great variety have created a demand for workers with a more extensive training in fundamental electrical and physical theory and laboratory procedure.

**Electronics** deals with the individual and statistical behavior of electrons, ions, and atoms in various types of electric circuit elements. It treats these ultimate units as individual interacting material particles, subject to the usual laws of dynamics, subject to and modifying electric field forces, and capable of emitting and receiving radiant energy. It attempts to make useful to the electrical industry as much as possible of the knowledge obtained by physicists in investigations of atomic behavior and structure. This general avenue of approach permits rational analysis of the properties of materials used in electrical engineering, and aids in the development of useful new materials. The most widely recognized field of electronic study is the development, analysis, and application of peculiarly electronic equipment, such as electron tubes, electronic control apparatus generally, radio broadcast transmitters and receivers, photosensitive relays, mercury rectifiers, circuit-breakers and circuit-interrupting devices of all sorts, cathode-ray and x-ray equipment, gaseous-discharge light-sources, and electric arc welding equipment.

**Industrial Electrical Engineering** includes the study of applications of electricity in industry, plant operation and management, problems of personnel, production, and the business side of manufacturing.

**Research.**—The staff in Electrical Engineering is always very glad to offer its laboratory facilities and advice to graduate students who wish to work on research problems leading to one of the
higher degrees. In keeping with this policy each year several fellowships are offered to graduate students.

Course 18 may be elected by graduate students pursuing research, while Course 9 serves the same purpose for undergraduates.

FACILITIES

The Electrical Engineering Laboratories include a dynamo laboratory, communication laboratories, a photometric laboratory, an electronics and high voltage laboratory, a heat transfer laboratory, and an electrical standards laboratory.

The Dynamo Laboratory is fully equipped with direct and alternating current apparatus of various types and sizes, representative of the leading American and foreign manufacturers.

In all of the electrical laboratory work, special emphasis is laid upon the development of the student's ability to analyze the phenomena which he observes in the operation of electrical machinery. To this end, and with the aim of developing the personal initiative of the student, a large number of moderate-sized machines have been provided in order to give each student intimate contact with the apparatus.

The laboratory is fully equipped with meters and instruments of various ranges, types, and makes. The equipment includes eight oscillographs with all accessories.

Distribution of power in the laboratories is controlled through a plug and socket system. The system gives great flexibility and requires that all connections be made by the student himself, but provides the means by which these operations may be quickly and easily performed.

The laboratory has on exhibit electrical apparatus of very early type which is of historic interest.

The Communication Laboratories are unusually well equipped for both practical and theoretical experimental study of communication by electrical means.

Oscillators covering both the audio and radio frequency ranges, vacuum tube voltmeters and ammeters, and impedance bridges are provided for accurate measurements. Standards of inductance, capacity, and resistance are available.

For telephone work an artificial open wire line, a loaded cable, and standard cable may be used for the study of the propagation of medium frequency voltages and currents. A supply of telephone instruments, sensitive meters, transformers, telegraph instruments including repeaters, and models of manual and automatic exchanges are provided for study.

The radio laboratory is well equipped with vacuum tubes for both receiving and transmitting purposes, high voltage generators for power supply, standard wavemeters and capacities, thermo-
ammeters and the usual types of auxiliary apparatus. A cathode
ray oscillograph is provided for the study of high frequency currents.
The Electrical Engineering Department also maintains an 800-watt
short-wave transmitter which is available for operation and study.

The Photometric Laboratory, unexcelled and with few equals,
is equipped for research as well as instruction in almost every phase
of lighting. For precision work there are four ten-foot straight
photometer bars, each in its own room and equipped with all
accessories, such as lamp rotators, screens, electrical control and
measuring devices, and sector discs. Photometer heads of the
Lummer and Brodhun, equality, contrast, and flicker types are of
Schmidt-Hoensch, or Leeds and Northrup manufacture, the best ob-
tainable. There are at this writing twelve portable photometers of six
different types for making surveys of interior lighting in real build-
ings and models of buildings, and exterior lighting. An imported
Weber photometer is available for students competent to do research
work; also photoelectric illumination meters for rapid measurements.
Integrating spheres, 30 inches in diameter for small light sources and
80 inches for large sources, are arranged for convenient use, also
as hemispheres. A single-mirror selector in conjunction with one
of the Sharp-Millar photometers gives the equivalent of a long
photometer bar for extended sources. A Keuffel and Esser color
analyzer provides a form of spectrophotometer especially designed to
facilitate measurements of the light-reflecting and light-transmitting
properties of solids and liquids for any spectral color of light. A
Taylor part-sphere, in conjunction with one of the Macbeth illumina-
tometers, provides fairly precise means of measuring reflection factor
of surfaces in place, without bringing them to the laboratory.

There is a historically complete as well as up-to-date collection
of light sources, for test as well as for record; including the latest
forms of arc lamp and luminous tubes. Special equipment has been
developed for our long series of published researches on line-sources
and surface sources of light, which is constantly in use for work
in course as well as for further investigations. A unique development
of autographic photoelectric apparatus, employing especially designed
amplifiers to multiply the currents from moving photoelectric cells
so that they can actuate electric oscillographs, enable us to obtain
a permanent record of a complete survey in the form of curves of illumination from any system of lighting installed in a scaled model,
within a few minutes, so that great amounts of data in graphic
form may be conveniently shown after preparations have been made.

A laboratory for photoelectric measurements is being developed.
In addition to a large Case barium oxide photoelectric cell and a
Leeds and Northrup recording potentiometer designed to be used
in combination for measurement of daylight and other illuminations
of great magnitude, there is a fairly complete collection of other
types of photoelectric cells available for use in Courses 73, 9, and 18.
Electronics and High Voltage Laboratory. Electronic facilities are available for instruction and research in a variety of special fields. A 70,000 volt surge generator and a 60,000 volt cathode-ray oscillograph arranged for photographic recording of extremely fast surge voltages are available for insulation, spark-over, and corona tests; the same oscillograph is equipped for use in the investigation of a-c arc re ignition, dynamic arc characteristics, other transient aspects of electric arc behavior, and studies of the very short time response of igniter-rod and grid-controlled rectifiers. Two smaller cathode-ray oscillographs are available for study and demonstration of repeating transients and high-frequency voltages and currents.

A varied assortment of electron tubes and photosensitive tubes and relays, with adequate laboratory test facilities, permits instruction and research in tube characteristics and uses. Shop facilities permit assembly of electronic amplifiers, oscillators, and control assemblies as individual projects, and, together with a high-vacuum pumping system, permit design, construction, and testing of special tubes.

Mercury rectifiers with and without grid and igniter-rod control, in sizes suited for control circuits and for power supply, are used in laboratory classes and in research projects. Electronic devices such as stroboscopes, neon glow lamps, etc., are used wherever advantageous for general laboratory service as well as for specific electronic instruction and research.

The Electrical Standards Laboratory is provided with standards of resistance, inductance and capacitance, standard cells, potentiometers, galvanometers, meters of the precision type, and ratio and phase angle testing equipment for current and potential instrument transformers, equipment for the generation of sine waves and for testing watt hour meters and core loss in iron. Oscillographs of the mechanical and cathode-ray types are available for study of wave shapes.

Heat Transfer Laboratory. The Department is unique in giving a considerable amount of heat transfer training, of use to the designer of apparatus and in the very large and diversified field of electric heat applications. It is intended that a heat transfer laboratory will be developed and equipped by gradual stages. Meantime, the Department has the only Hydrocal in existence; this is a calculating machine of new type, able to demonstrate and solve transient situations in heat transfer and other types of diffusion. The Hydrocal is used for demonstrations in undergraduate work; graduate students themselves operate it in Elec. Eng. 18 and Elec. Eng. 52.

Power Plant. The University has a medium-sized steam power plant of its own which is available for instructional purposes; also the University is well situated with regard to both hydraulic and steam power plants of the Detroit Edison Company. Technical
inspections of these plants are made in conjunction with the classroom work in appropriate courses.

Visits of Inspection.—See section 42.

REQUIRED COURSES

The required courses offered by the Department are designed to give every electrical student a thorough basic training in the principles of electrical engineering. The aim is to develop well-rounded engineers rather than narrow technicians. In addition to the following required courses, elective courses in fields of particular interest are available to undergraduates and graduates.

Course 1 serves as an introduction to the engineering viewpoint of electricity and magnetism.

Courses 2, 3, and 4 form a basic group in the study of electrical circuits and machinery.

Course 5 is devoted to the fundamental electric, magnetic, and thermal considerations underlying the design of all electric apparatus.

Course 7 is an introduction to the principles of illumination and to the criteria by which its quality may be judged.

Course 11 is a study of the technical and economic principles underlying power generation and transmission.

Course 12 introduces the fundamentals of electronic theory, and includes a study of the simpler forms of vacuum tubes.

Course 17 is an advanced study of electrical circuits, including transients, non-sinusoidal wave forms, and long electrical lines.

The staff of the Department of Electrical Engineering, by constant study and revision of course content and teaching method, aims to offer such work as will react to the ultimate benefit of the student rather than to his immediate gain. Throughout, the teaching of theory and its modifications by practice, the development of analytic judgment, and the acquiring of a fundamental scientific background are emphasized. The acquisition of specific factual knowledge is left, except where necessary to sound pedagogy, to the training in actual experience through which every electrical graduate must go during his first years out of school.

Close contact is maintained with the employing industries, both to enable the instructional staff to keep in touch with a fast-growing art and to facilitate the finding of employment for the graduates.

Graduate work is urged for every student who would benefit by taking more advanced work. The graduate courses offered are being built up from year to year. The mathematical and physical nature of advanced electricity makes it profitable for some gifted students to spend much time in mathematics and physics; for the better students every encouragement is offered.

The individual initiative of exceptional seniors is encouraged
by seminar, research, and special problem courses offered for the purpose.

Scholarships and fellowships are available at the University for assignment to students of outstanding ability and high scholastic standing. Any electrical student desiring to learn of the possibilities in this respect, or to make application, should consult the head of the Electrical Engineering Department. Application for a Graduate School fellowship must be made before March 1. See sections 44 and 45.

CHOICE OF ELECTIVE WORK

With regard to electives in the nontechnical group, the student is advised to select such courses in the arts and sciences as will contribute to a broad, liberal education. Students feeling the lack of sufficient facility in the use of English are strongly urged to elect advanced courses in this subject, as the ability to speak and write good English is essential to a broad education in general, as well as to the highest success in the engineering profession.

The student must begin, not later than his sophomore year, to plan the courses he desires to select for his elective work, both technical and nontechnical. This will be done in consultation with the head of the Electrical Engineering Department, and advisers appointed by him, and has as its purpose the coordination of all elective work into a consistent and unified program having the greatest value to the student. A consultation with the department head or the adviser will be held prior to the beginning of each semester, thus permitting the original program to be modified, if necessary, to realize more fully the student's objectives.

The Electrical Engineering Department does not have a rigid group election system, but, rather, the needs and interests of each student are considered individually. The following groups are not mandatory in their present form, nor are they expected to cover all situations. They are given to show the courses available in the Electrical Engineering Department, and cognate courses in other departments. Elections may include other courses, also, provided that the program has a definite and unified purpose, and is approved by the department head.

It is, of course, impossible to incorporate any large part of any of these groups in the undergraduate program. The strong student who can profit by the instruction is urged to consider the advisability of at least one year of graduate work leading to the master's degree. In such a year he will have opportunity to take advanced work along the lines in which he expects to specialize. Such work is usually impracticable in the undergraduate years, due to lack of time and adequate preparation.

Course 9 or Course 18 may be added to any of the programs. These courses cover individual research problems which may be selected in accordance with the wishes of the student, and which may be conducted by laboratory or library work, or by analytical
study. The election may be for any number of hours approved by the instructor involved, with consideration of the suitability to the student’s program. Course 9 is intended for undergraduates, and involves rather close faculty supervision. Course 18, intended for graduates, involves independent work with little supervision, and requires a report in the form of a thesis.

SUGGESTED ELECTIVE GROUPS

*Electrical Power Engineering:*—
- Elec. Eng. 8, Electric Traction
- Elec. Eng. 16, Electrical Rectification
- Elec. Eng. 19, Study of Design—Power Plants
- Elec. Eng. 20, Study of Design—Transmission and Distribution
- Elec. Eng. 31, Symmetrical Components
- Elec. Eng. 33, Industrial Electrical Engineering
- Elec. Eng. 36, Electric Rates and Cost Analysis
- Elec. Eng. 82, Theory of Gaseous-Conducting Electronic Apparatus
- Mech. Eng. 5, Thermodynamics
- Mech. Eng. 13, Steam Turbines
- Mech. Eng. 16, Water Turbines
- Civil Eng. 12, Water Power

*Illumination:*—
- Elec. Eng. 15, Advanced Lighting
- Elec. Eng. 70, Electrical Distribution, Wiring and Control for Lighting
- Elec. Eng. 71, Interior Illumination—Study of Design
- Elec. Eng. 73, Photoelectric Cells
- Elec. Eng. 74, Lighting Equipment
- Elec. Eng. 82, Theory of Gaseous-Conducting Electronic Apparatus
- Physics 186, Light
- Physics 187, Geometrical Optics
- Physics 188, Laboratory Work in Light
- Fine Arts 101, History of Art
- Psychology 37, Introductory Psychology
- Psychology 160, Psychology of Vision
- Arch. Design 4, Theory of Color
- Arch. 15, History of Architecture

*Electrical Engineering Design:*—
- Elec. Eng. 6, Advanced Theory of the Induction Motor
- Elec. Eng. 25, 25a, Advanced Electricity and Magnetism
- Elec. Eng. 27, Electric and Magnetic Properties of Materials
- Elec. Eng. 51, Electromagnetic Problems in Electrical Design
- Elec. Eng. 52, Heat Problems in Electrical Design
- Advanced Courses in Mathematics and Physics
Communication:
Elec. Eng. 10, Advanced Theory of Electrical Circuits
Elec. Eng. 16, Electrical Rectification
Elec. Eng. 22, Radio Communication

SPECIAL CURRICULA

In cooperation with the School of Business Administration, a five-year course leading to the degree of M.S. in Industrial Engineering is offered.

A five-year co-operative program in Electrical Engineering and Industry is offered in cooperation with certain leading electrical industries. The student spends, in all, four semesters or sixteen months in one chosen industry. In this program, the required university work is the same as that for students choosing the regular program in Electrical Engineering. However, successful completion of the industrial part of the program entitles the student to nine credit hours which may be counted as nine hours of elective studies. The time spent in the University will be made up of those semester and summer session periods during which the student is not connected with the industry. The work in industry will be closely supervised by an officer of the University.

Combined Courses have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.

Advice to Students of other colleges and universities with regard to planning their courses before coming to the University is given in section 14.

Military Science.—The attention of prospective students in Electrical Engineering is called to the Reserve Officers Training Corps. Work offered in the Signal Corps group is of special interest to students in Electrical Engineering, as they are well qualified for it. Those who consider taking Military Science are urged to enroll at the beginning of their course. For further details see section 66.

CURRICULUM IN ELECTRICAL ENGINEERING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Electrical Engineering) are required to complete the curriculum detailed below. For the definition of an hour of credit see section 50.

**FIVE-YEAR COURSE IN ELECTRICAL AND INDUSTRIAL ENGINEERING**

In cooperation with the School of Business Administration, a program for Electrical Engineering students may be arranged for a fifth year leading to the degree of Master of Science in Industrial Engineering.
COOPERATIVE COURSE IN ELECTRICAL ENGINEERING AND INDUSTRY (FIVE YEARS)

The coöperative plan enables a student who is permitted to enter the course to work for fifteen months, divided into four periods, with some industrial concern, where he is rotated through various departments as a cadet engineer. Upon completion of the industrial work and of the University credit requirements of 132 hours, the student will receive 8 credit hours (in place of University elective courses), giving him 140 hours required for the bachelor’s degree. About 5 calendar years is required for the course.

Permission to enter the course is granted only to those students who have received at least one semester’s University credit with a grade average distinctly above the passing requirement, and for whom definite arrangements have been made with some particular industrial concern. While with the concern the coöperating student receives wages which are satisfactory for a training course but are not intended to be sufficient to enable the student to work his way through the University. If mutually agreeable to the coöperating student and industrial concern, this course may lead to permanent employment.

Coöperative relations will be established only with such industries as are able and willing to offer a definite program of work of educational value. No credit, therefore, will be given for industrial work except as arranged under the coöperative plan.

COURSES IN ELECTRICAL ENGINEERING

1. **Principles of Electricity and Magnetism.** Mathematical and physical treatment of force actions and energy relations in electrostatic and electromagnetic fields; capacitance and inductance of systems of conductors; development of systems of electric and magnetic units; illustrations of the universality of the laws of physics as they occur in the fields of electricity, magnetism, gravitation, heat, light, etc. Three lectures and one three-hour computing period. **Prerequisites:** Math. 37 and Phys. 46. Four hours credit. Each semester.

2. **Direct Current Apparatus and Circuits.** Torque, current, flux, e.m.f. and speed relations in self-regulation and control of motors and generators; electric and magnetic circuit calculations; power losses and efficiency of machines; commutation and armature reaction; parallel operation of generators; mechanical and electrical coupling of motors. Two lectures, one three-hour computing period, and one four-hour laboratory period. **Prerequisite:** Eng. Mech. 1, and preceded or accompanied by Phys. 46. Four hours credit. Each semester.

2a. **Direct and Alternating Current Apparatus and Circuits.** Characteristics of direct and alternating current motors and gen-
3. Alternating Current Circuits. Wave form of e.m.f.; relations of simple harmonic e.m.f.'s and currents; phase differences; active, reactive and apparent power, power factor and reactive factor; resistance, inductance, and capacitance, singly and in any combination; polyphase circuits, balanced and unbalanced; power in polyphase systems; e.m.f.'s of armature windings—vector representation and calculation; transformers—construction, theory, operation, simple and complete vector diagrams, losses and constants, efficiency and regulation; instrument transformers; constant current transformers. Two lectures, one four-hour computing period, and one four-hour laboratory period. Prerequisites: Elec. Eng. 2 or 2a. Four hours credit. Each semester.

4. Alternating Current Machinery. Principles of the synchronous machine, the induction machine, the synchronous converter, and the various types of single-phase motors. Lectures, recitations, computing period, and one four-hour laboratory period. Prerequisite: Elec. Eng. 2a or 3. Four hours credit. Each semester.

5. Fundamentals of Electrical Design. Design problems from various types of apparatus involving the electric and magnetic circuits; extensive treatment of field mapping; a large amount of heat transfer and temperature rise work, using conduction, convection, and radiation, giving an introduction to heat in the form needed by the electrical engineer; particular emphasis given to tabular computation, step-by-step, trial-and-error, and graphical methods of solution. Two lectures and two four-hour computing periods. Prerequisites: Elec. Eng. 1 and 3. Four hours credit. Each semester.

7. Illumination and Photometry. Concepts, quantities, units, and relations employed in this science, such as the lumen, candlepower, foot-candle, lambert; theory and use of typical measuring devices—precision photometer and accessories, portable photometers, integrating spheres, reflectometers; calculation of illumination from point, line, and surface sources of light exhibiting typical space-distributions of light; light flux output of any source having symmetrical distribution; calculations regarding light in an inclosure, utilization coefficient, point-by-point and flux-of-light method for
designing illumination of an interior; laws of vision as they affect lighting; characteristics of lamps, reflectors, inclosing globes; glare and shadow; industrial, office, school, and residence lighting. Two lectures and one three-hour laboratory period. Prerequisites: Phys. 46, and must be preceded or accompanied by Math. 37. Two hours credit. Each semester.

7a. Building Illumination. Illustrations of causes of, and means to avoid, glare, improper shadows, poor distribution, unsteady light, and other faults; means for providing proper illumination for typical interiors such as schools, offices, and residences. This course is designed to acquaint students of public health, factory administration, and architecture with criteria for determining whether the lighting is good or harmful to the eyes. One illustrated lecture each week and one or two demonstration periods during the semester. Not open to electrical engineering students. One hour credit. Each semester.

9. Directed Research Problems. Special problems are selected for laboratory or library investigation with the intent of developing initiative and resourcefulness. To a large degree the student's own desires will control the subjects investigated. The work differs from that offered in Elec. Eng. 18 in that the instructor is in close touch with the work of the student. Elec. Eng. 9 may be elected by seniors who have suitable preparation. Elec. Eng. 18 is for graduates. Prerequisite: Elec. Eng. 3. Credit by arrangement. Each semester.

10. Advanced Theory of Electrical Circuits. Mathematical analysis of theoretical and practical problems; electrical filters; transmission of electric waves on lines having distributed capacitance, inductance, resistance, and leakage; mechanism of reflection at terminals; electromagnetic waves in space; Maxwell's equations. The course material is fundamental to further work in telephone, telegraph, and radio circuits. Lectures. Prerequisites: Elec. Eng. 3, and preceded or accompanied by Elec. Eng. 17. Three hours credit. Each semester.

11. Power Plants and Transmission Systems—Economics of Design. Elementary principles of corporate finance, study of economic decay and tests for obsolescence; power plant load curves as a basis for design; economic load division between units and plants, economic conductor section and distribution systems; study of plant location; selection of oil circuit breakers; economic use
162  COLLEGE OF ENGINEERING

of power limiting reactors, relays, synchronous condensers for power factor control and phase modification; constant voltage transmission lines. Lectures, recitations, and problems. Prerequisite: Elec. Eng. 2a or 3. Five hours credit. Each semester.

12. Electronics and Electron Tubes. Potential distribution diagrams; analysis of electric fields in electron tubes; motions of electrons in electric, magnetic, and curved fields; cathode-ray devices; space-charge-limited currents. Kinetic theory of electric conduction and electron emission; work function. Electron tube characteristics; simple amplifier circuits, gain, distortion, and coupling; survey of radio oscillators, detectors, modulators. Atoms and radiation; energy-level diagrams, ionizing processes and potentials; photo-electric currents and their uses. Theory and application of grid-controlled and ignitron rectifiers, illustrative of electric arc properties and of the application of kinetic theory to densely ionized regions; probes, positive ion sheaths, electron temperature, ion concentration. Three lectures and one three-hour laboratory period. Prerequisites: Elec. Eng. 1, and preceded or accompanied by Elec. Eng. 3. Four hours credit. Each semester.

15. Advanced Lighting. Selection by the student of a topic, with instructor's approval, for continued and intensive study, which is pursued until either all sources of information in English are exhausted or the time of the course is ended; short oral reports by each student to the class each week; written report and bibliography presented to instructor at end of course. Prerequisites: Elec. Eng. 7, and preceded or accompanied by Elec. Eng. 3. Two hours credit. Second semester.

16. Electrical Rectification. Equipment and circuits used for rectification; study of wave forms in circuits composed of resistance, inductance, capacity, and batteries; effective and average values; power measurements; Fourier analysis. Transformer connections, single phase and polyphase; transformer problems, saturation effects. Basic action in the principal types of rectifiers; gaseous ionization and electronic action as applied to rectifiers; applications. Lectures and recitations. Prerequisites: Elec. Eng. 12, and preceded or accompanied by Elec. Eng. 17. Two hours credit. Second semester.

17. Electromechanics. Analysis of complex alternating current waves; average and effective values; meaning of power factor; the method of the complex variable in a-c. problems; the application of differential equations to solutions of simple transients and oscillatory circuits; use of hyperbolic functions in solving the general equation of a circuit containing distributed inductance, capacitance, resistance, and leakage. Lectures and problems. Prerequisite: Elec. Eng. 3. Four hours credit. Each semester.
18. Research Work in Electrical Engineering. Students electing the course, while working under the general supervision of a member of the staff, are expected to plan and carry out the work themselves, and to make a report in the form of a thesis. Research. Elected by permission of Head of Department. Credit by arrangement. Each semester.

19. Study of Design—Power Plants. Studies of modern power station design and performance; a brief treatment of prime mover application; detailed study of electrical equipment, generators, excitation system, auxiliary power, switchboard, relays, automatic operation, circuit breaker control and application; special problems of interconnection, stability, single-phase short circuit study through use of symmetrical coordinates. Prerequisites: Elec. Eng. 11 and 17. Two hours credit. Second semester.

20. Study of Design—Electric Transmission and Distribution Systems. Electrical features of efficiency, regulation, control of voltage and power factor, inductive interference, corona and surges; mechanical problems of the design of supporting structures, sags and spans, etc. Lectures and recitations. Prerequisites: Elec. Eng. 11 and 17. Two hours credit. Second semester.

22. Radio Communication. Advanced work in resonant, coupled, and oscillatory circuits. Application of these circuits to radio problems. Audio and radio frequency amplification; transmitting and receiving circuits with especial attention to the use of vacuum tubes; antennae and principles of electromagnetic radiation; field measurements; frequency control. This course is so scheduled that it conflicts with Elec. Eng. 11. Students desiring to take Elec. Eng. 22 should arrange their schedules accordingly. Lectures and laboratory. Prerequisites: Elec. Eng. 12 or Phys. 165; preceded or accompanied by Elec. Eng. 17. Four hours credit. Second semester.

22a. Radio Communication. This course is a continuation of Elec. Eng. 22 and will be given upon request of a sufficient number of students. The course will consist of advanced work in radio such as antennae and principles of electromagnetic radiation; field measurements; and high frequency measurements. Any other subjects of special interest to the class will be taken up. Lectures and laboratory. Prerequisite: Elec. Eng. 22 and permission of instructor. Three hours credit.

23. Elements of Electrical Communication. This course together with Elec. Eng. 24 is designed for nonelectrical students who are desirous of obtaining a general knowledge of the communication field. After a review of direct and alternating currents the following subjects are considered: equivalent networks; multi-
section uniform networks, propagation constant; uniform lines; loading, telephone repeaters; phantom circuits; line characteristics. Lectures and laboratory. **Prerequisite:** Elec. Eng. 2a or equivalent. Not open to electrical students. Three hours credit. First semester.

24. **Elements of Electrical Communication.** This course is a continuation of Elec. Eng. 23. Series, parallel and coupled circuits; vacuum tubes; audio and radio frequency amplifiers; detection; receiving sets; oscillators; modulation; short-wave and broadcast transmitters; antennae. Lectures and laboratory. **Prerequisite:** Elec. Eng. 23. Three hours credit. Second semester.

25. **Electromagnetic Field Theory.** Advanced theory and problems in electric and magnetic fields, using elementary vector methods which are introduced as required. Problems in rectangular, cylindrical, and spherical coordinates, with and without space charge. Maxwell's equations, waves, and propagation of energy. **Prerequisites:** Elec. Eng. 1 and 3. Three hours credit. First semester.

25a. **Engineering Applications of Electromagnetic Field Theory.** Lorentz's equations, retarded potentials, radiation from antennae. Skin effect. Mass as a function of velocity; energy and mass; application to cathode-ray oscillograph, electron mechanics. Two-dimensional field studies, conformal transformations. Electrical surges, measurement of surge voltages and currents. Relations of field theory to modern physics. **Prerequisite:** Elec. Eng. 25. Three hours credit. Second semester.

26. **Heaviside Operators.** Advanced theory of electrical circuits as developed by the application of Heaviside operators. Methods of circuit solution for transients in circuits with lumped constants; circuits with distributed constants; long lines; cables. A study is made of the fundamental theorems upon which the method rests. Applications to engineering problems. Lectures and discussions. **Prerequisite:** Elec. Eng. 17. Two hours credit. Second semester.

27. **Electrical and Magnetic Properties of Materials.** Studies of the electric and magnetic properties of gaseous, liquid, and solid materials used in electrical engineering. The subject matter is treated from the engineering point of view which is coordinated as far as possible with the modern physical viewpoint. Theory of electrical insulation, Debye dipole theory, absorption, conduction, losses, dependence of dielectric constant upon frequency and temperature, breakdown. Electrolytic and metallic conduction. Dia-, para-, and ferro-magnetic materials and theory. Electric cables, new electric and magnetic materials, permanent magnets, nonlinear circuits, batteries. Lectures and recitations. **Prerequisites:** Elec. Eng. 12 and 25. Three hours credit. Second semester.
28. **Technical Electrical Measurements.** Theory and practice in making measurements, particularly in alternating currents, to a precision and accuracy required by modern laboratories. Measurements of voltage, resistance, current, power, energy, etc. Ratio and phase angle tests of current and potential instrument transformers. Indicating instruments, watthour meters, demand meters, relays, etc. Iron losses and their separation into hysteresis and eddy current losses. Opportunity is provided for working with a-c bridges and oscillographs of various types, including the cathode-ray oscillograph. Individual reports on various measurement problems. One afternoon of laboratory. *Preceded by Elec. Eng. 3.* Two hours credit. Each semester.

31. **Circuit Analysis by Symmetrical Components.** Representation of unbalanced polyphase currents and voltages by component symmetrical sets; solution of unbalanced circuit problems by the use of symmetrical components; faults on power systems; reactances of synchronous machines, transformer reactances; reactances of transmission lines, using the method of geometric mean distances; metering of sequence quantities; application to inductive coordination study. Lectures, recitations, and problems. *Prerequisite: to be preceded or accompanied by Elec. Eng. 17.* Two hours credit. First semester.

33. **Industrial Electrical Engineering.** Industrial control and motor application with short review of motor performance. Detailed study of motor and control equipment suited to particular applications: electric hoists, electric braking, hydraulic pumps, machine tools, paper machines, electric elevators, ventilation, electric furnace and other heat applications. Lectures and problems. *Prerequisite: Elec. Eng. 2a or to be preceded or accompanied by Elec. Eng. 4.* Three hours credit. First semester.

36. **Electric Rates and Cost Analysis.** Capitalization; fair return on investment; analysis of costs and value of electrical energy; customer charge, demand charges, energy charges; investigations of practical systems used in charging for electrical energy. Lectures. *Prerequisite: Elec. Eng. 11; open to seniors only.* One hour credit. Second semester.

40. **Telephone Equipment.** Study of equipment used in telephone communication, including practices in manual and mechanical central offices, toll offices, telephone repeater stations, carrier current systems, and outside plant. Lecture and discussion. *Prerequisite: to be preceded by Elec. Eng. 3.* Two hours credit. First semester.

41. **Telephone Communication.** Study of the characteristics of circuits, networks, and telephone apparatus at audio frequencies. Lecture and laboratory. *Prerequisite: to be preceded or accompanied by Elec. Eng. 10.* Two hours credit. Each semester.
51. Electromagnetic Problems in Electrical Design. Further work in field mapping, mainly by rough analyses rather than by finished maps; further work in mmf. and flux distribution in apparatus; various magnetic problems, such as furnished by commutation, equalizer connections, the magnetic bridge, the watthour meter, etc. **Prerequisite: Elec. Eng. 5 and permission of instructor.** Two hours credit. Given when demand is sufficient, either semester or in summer school. Courses 51 and 52 are not, in general, given at the same time.

52. Heat Problems in Electrical Design. Advanced work in the fundamentals of heat transfer by radiation, conduction, and natural and forced convection; application to specific situations, such as comparison of hydrogen and air cooling; all work directed toward making heat transfer and temperature rise available to electrical engineers in design, application, and operation of apparatus in general. The student is familiarized with the operation of the Hydrocal, a new hydrodynamic-type calculating machine for solving transients in diffusion. At this time the Department owns the only Hydrocal in existence. **Prerequisite: permission of the instructor.** Two hours credit. Given when demand is sufficient, either semester or in summer session. Courses 51 and 52 are not, in general, given at the same time.

70. Electrical Distribution, Wiring, and Control for Lighting. Selection and application of equipment, design of circuits, study of methods of installation, for electric-power supply to lamps. Plans and specifications, analyses, and tests. Lectures, problems, and surveys. **Prerequisites: Elec. Eng. 3 and Elec. Eng. 7.** Two hours credit. Second semester.

71. Interior Illumination, Study of Design. Unusual as well as typical designs of lighting, particularly those which have been actually built and are available for testing as a check upon the calculations, are analyzed quantitatively and qualitatively. Methods and rules of design commonly used in spite of their insufficiency in unusual cases, because of their convenience, are subjected to close scrutiny. Higbie's book *Lighting Calculations*, used as textbook, is largely based on the preparations for this course. Consisting principally of lectures and problems, the course may include some field surveys or laboratory tests on scaled models, to check the calculations required.

On account of the great differences in fundamental lighting courses available in various colleges, the permission of the instructor to enter this course must be had in each individual case. Though it is intended primarily for graduates, especially qualified undergraduates may receive such permission. **Prerequisite: Elec. Eng. 7 or equivalent.** Two hours credit. First semester.
73. Photoelectric Cells and Their Applications. Study of operating characteristics of photoelectric cells; selection of suitable amplifying circuits and relays; industrial applications; photoelectric photometers. Lectures and laboratory work. Prerequisite: permission of instructor. Two hours credit. First semester.

74. Lighting Equipment. Analysis of design and performance of lamps, reflectors, refractors, diffusers and other light-control media, and of complete luminaires, with reference especially to proper selection or design of assemblages to produce economically illuminations that are visually effective or esthetically desirable, for interiors or exteriors of buildings, for streets and display. Lectures and problems. Prerequisites: Elec. Eng. 3 and Elec. Eng. 7. Two hours credit. First semester.

81. Theory of High-Vacuum Electronic Devices. Analysis of electric fields in electron tubes by conformal transformations; solutions of the equations of motion of electrons in electric, magnetic, and combined fields; mechanism of grid control of space-charge-limited currents. Rational analysis of volt-ampere curves of multi-electrode tubes; cathode-ray focusing. Energy-level diagrams of the quantum-theory statistical behavior of free electrons in metals; derivation of Dushman's equation for thermionic emission; properties of homogeneous, oxide-coated, thoriated, and other thermionic surfaces. Propagation of light; sensitivities of photoelectric surfaces; use of semiconductors in photocells and rectifiers; gas amplification of photoelectric currents. Two lectures and one four-hour laboratory, computing, or seminar period. Prerequisites: Elec. Eng. 12 or satisfactory first courses in electricity and magnetism and in electronics. Three hours credit. First semester.

82. Theory of Gaseous-Conducting Electronic Apparatus. Atomic structure survey; atomic energy states and spectral symbolism; energy-level diagrams for sodium, neon, mercury, copper. Velocity distributions in gases; mean free paths, elastic and inelastic collisions, probabilities of excitation, ionization, recombination; mobilities. Properties of the plasma and boundaries of an arc or glow discharge; ion and energy balance, equilibrium dimensions; sheaths, probes, the cathode spot; transition from glow to arc. Gaseous-discharge light sources. Grid and igniter-rod control of gas-filled tubes. Power dissipation, arc-back, and commutation in mercury-arc rectifiers. Voltage recovery and deionization rates, arc reignition, and space charge in alternating-current circuit breakers. Corona, growth of a spark. Two lectures and one four-hour laboratory, computing, or seminar period. Prerequisites: Elec. Eng. 12 or satisfactory first courses in electricity and magnetism and in electronics, to be preceded or accompanied by Elec. Eng. 11 and Elec. Eng. 17. Three hours credit. Second semester.
Summer Session

Courses 2a, 3, 4, 17, and 18 are generally offered in the Summer Session. Courses 10, 11, 25, 26, 27, 31, 51 or 52, 71, and 81 or 82 may be given if there is sufficient demand. Those wishing to elect any of these courses should communicate with the instructor in charge of the particular course some time before the opening of the Summer Session.

77. ENGINEERING MECHANICS

Professors Eriksen, Menefee, and Van den Broek; Associate Professors Swinton and Dodge; Assistant Professors Liddicoat, Hansen, and Olmsted; Dr. Young and Dr. Everett.

Engineering mechanics is the subject which, probably more than any other, tests the student's ability to use the technical training given him in preceding courses and at the same time prepares him for what is to follow.

No definition of engineering, from whatever angle given, is complete without some reference to forces. It is in mechanics that the student is given the engineer's conception and methods of handling forces. This is accomplished by—

a) A general required three-hour course in fundamentals, definitions, and conceptions of the ways in which mathematics, analytical and graphical, may be used with the laws of equilibrium, to solve problems dealing with the various phases of forces, followed by:

b) A required four-hour course on strength and elasticity of materials. This course is supplemented by a one-hour laboratory course.

c) A required three-hour course in dynamics, supplemented by a one-hour elective course in the laboratory.

d) A required three-hour course in hydromechanics with a demonstration room for illustrating principles of streamline flow, channel and weirs, pipe flow, orifices, etc.

Library.—The general engineering library has books for collateral reading and study in mechanics.

The Physical Testing Laboratory occupies two adjoining large rooms with entrance at Room 102, West Engineering Building. The equipment comprises a 50,000-pound, a 100,000-pound, and a 200,000-pound tension-compression machine, a 230,000-inch pound torsion machine with jaws for taking specimens 27/8 inches in diameter, an Olsen impact machine, an Upton Lewis endurance tester, an electrically driven bar bender for bars up to 2 1/2 inches in diameter, a Brinell hardness tester, a wire tester, a transverse bending machine for cast iron arbitration bars and other short demonstration beams, a nine-foot transverse bending machine and
a power saw and grinder, an electric furnace, a polishing table and wheel with photographic equipment, and cement-testing equipment for all standard cement tests.

The special accessory equipment consists of one six-element telemeter strain gauge, one Huggenberger extensometer, one Martens mirror strain gauge, one electrical micrometer gauge, one contact micrometer gauge, several Berry gauges, one vertical and one horizontal portable seismograph.

CURRICULUM IN ENGINEERING MECHANICS AND REQUIREMENTS FOR GRADUATION

The following curriculum leading to the degree of Bachelor of Science in Engineering (Engineering Mechanics) has been provided to meet the increasing demand from industry for graduates with the thorough theoretical grounding in mechanics and mathematics needed to cope with difficult engineering problems of research type.

The number of hours in the technical, mathematics, and elective groups are subject to variation on the advice of the head of the department.

COURSES IN ENGINEERING MECHANICS

2. Strength and Elasticity of Materials. A study of the application of mathematics and principles of mechanics to solution of problems in stress and strain on engineering materials, including resistance to direct force, bending, torque, shear, eccentric load, deflection of beams by area moment method and compounding of simple stresses. Recitations, lectures, and problems. Prerequisites: Eng. Mech. 1, and preceded or accompanied by Math. 37. Four hours credit. Each semester.

3a. Experimental Dynamics. Experiments with acceleration, vibration, balancing, critical speeds, and gyroscopics. One hour laboratory period, with report, each week. Must be preceded or accompanied by Eng. Mech. 3. One hour credit. Each semester.

4. Hydromechanics. Properties of fluids; statics of fluids, compressible and incompressible; flotation; accelerated liquids in relative equilibrium; dynamics of fluids, Bernoulli’s theorem, measurement of velocity and pressure; the flow of viscous fluids, thin films, discontinuity, Reynolds' number; viscometry; the flow of fluids in pipes, Reynolds' criterion; flow with free surface, channels, weirs; orifices and nozzles; impulse and momentum in fluids; resistance of immersed and floating bodies, Froude's number, boundary layer; dynamics of compressible fluids, Mach’s number, cavitation, Bernoulli’s theorem; the use of models. Recitations, lectures, demon-
5. Materials Testing. (Required only of Architectural Engineers.) History of rapid development of the science; correlation with mechanics; study of testing machines, calibration, and particular function. Written reports, special emphasis on technique of report writing, and graphic presentation and interpretation of data. Laboratory work devoted to tests on steel, iron, wood, brick, and structural materials, including standard cement tests, water ratio theory, voids in sand and gravel, reinforced and unreinforced concrete beams, and granular metric analysis of sand. Letters, laboratory, reports. Prerequisite: Eng. Mech. 2. Two hours credit. Each semester.

10b. Research in Theory of Structures. Special problems such as arches, arch dams, suspension bridges, elastic stability of columns and framed structures, impact effect and vibration of bridges. Credit to be arranged. Each semester.

12. Vibration Problems in Engineering. Vibration of systems with one degree of freedom. Balancing of rotating machines; calculation of critical speeds of rotating shafts; theory of vibration-recording instruments; springs of variable flexibility. Systems with several degrees of freedom, and elastic bodies. Vibration of cars; torsional and lateral vibration of shafts; vibration of beams; vibration of bridges, turbine blades, and turbine discs. Prerequisites:

15. Theory of Thin Bars, Thin Plates, and Slabs. With application to the solution of such problems as bending of beams on elastic foundation and track stresses; combined bending and tension of compression; buckling of solid, tubular, and built-up columns under various conditions; buckling of thin plates, such as flanges and webs of built-up sections, and the web of a plate girder; bending of slabs under various conditions, with application to highway and structural engineering. Designed principally for students interested in structural design. Prerequisite: Eng. Mech. 2. Two hours credit. First semester.

Summer Session

Courses 1, 2, 2a, 3, 4, 9, 12, 13a, 14, and 24, or similar courses, will be given during the Summer Session.

78. GEODESY AND SURVEYING

Professor **JOHNSTON**; Associate Professors **CAREY** and **BOUCHARD**; Assistant Professors **MCFARLAN**, **YOUNG**, and **BLEEKMAN**.

**Geodesy and Surveying**, broadly speaking, are the sciences which have to do with the making, recording, and reduction of observations and measurements for determining the relative positions of points on or near the earth's surface. Geodetic theory is applied when the work is influenced by the size and shape of the earth. The practice of plane surveying is confined to small areas.
Geodesy is employed in locating the natural and artificial features of large areas of the earth's surface both on land and at sea. Field data are obtained by a combination of astronomical and terrestrial measurements. These involve precise triangulation systems, level circuits, and topographic studies. The physical and mathematical sciences are relied upon, both in the making of observations and in the interpretation of data. Some of the data thus obtained are recorded in condensed form as maps, which are of great practical value in connection with military and commercial operations. While the main lines of geodetic work are in progress, much information from related fields of science is obtained. Geodetic measurements were made to determine the shape and size of the earth as early as 276 B.C. The science, as we know it today, owes much to Newton, Laplace, Legendre, Gauss, and other investigators of the past few centuries. The field is now sufficiently definite and stable to offer attractive opportunities to well-trained men.

Topographic Surveying.—Extensive topographic work is performed by the United States Coast and Geodetic Survey, the United States Geological Survey, and the Corps of Engineers of the Army. Modern city plans are preceded by topographic studies which often include large areas lying beyond the existing municipal limits. Geodetic principles are often applied here.

Boundary Surveying.—The location of boundaries, the placing of monuments, and the filing of permanent records, including notes, computations, maps, etc., is probably the most universal branch of surveying. Every property owner and every political division of the nation has a direct interest in the location of property lines. With the increase in population and in land values, this phase of surveying is becoming more important. The solution of many problems in this field requires a knowledge of geodesy and land law.

Legal and Administrative.—Many problems with which the surveyor is confronted make it necessary that he concern himself with the legal and administrative principles relating to boundary surveying, the registration of land titles, land laws, and riparian boundaries.

The Courses offered by the Department aim to give the student of geodesy and surveying a fundamental training that will enable him to enter any branch outlined above. In order that the Department may keep in touch with practice and aid graduates in securing employment, it maintains contact with organizations which specialize in surveying work.

The Department of Geodesy and Surveying, one of the oldest departments of the College of Engineering, became, by action
of the Board of Regents in 1921, a professional department offering a curriculum leading to the degree of Bachelor of Science in Engineering (Geodesy and Surveying). The curriculum provides such training in pure and applied science as may be necessary to interest students in geodetic work, higher surveying, astronomy, and mathematics. Graduate work leading to the professional degree of Geodetic Engineer is done under the direction of the Graduate School. The Department is convinced that only by the mastery of fundamentals may students develop that proficiency which ultimately stimulates love of work. The Department, representing one of the oldest fields of science, accepts this basic idea as its guiding rule. The aim is to help the individual acquire a foundation upon which he can continue to build in the future, rather than to develop an immediately marketable efficiency. Students of geodesy and surveying are therefore urged to choose their elections in such a manner as to broaden and strengthen their foundations in science, pure and applied. They are also encouraged to become interested in the humanistic sciences and philosophy. Even those of the highest scientific attainment are obliged to deal with others, and they should always appreciate their responsibilities to society. The aid of the Department is always available to those students who are in doubt as to electives which would be most helpful to them.

Equipment for Surveying.—The equipment for surveying includes transits, levels, rods, tapes, etc. Special instruments are provided for triangulation and precise levels. Plane tables for topographic surveys, cameras for surveying and engineering photography, and a chronometer and sextants for use in astronomical work are available. The Department possesses barometers, hand levels, plotting instruments, and various kinds of small incidental equipment.

Camp Davis.—The University of Michigan was the pioneer in the establishment and maintenance of a camp for field work in surveying. The camp was organized under the supervision of the late Professor J. B. Davis in 1874. There are but few districts east of the Missouri River where field work in surveying is not handicapped by growths of brush and trees or by buildings and other structures. In February, 1929, the University of Michigan purchased lands in Jackson’s Hole, Wyoming, for a new camp for surveying work. The new location was occupied for the first time during the following summer. It is in the valley of the Hoback River, twenty miles south and east of the town of Jackson and seventy-five miles south of the Yellowstone Park. An excellent road—U.S. 187—connecting the Lincoln Highway at Rock Springs, Wyoming, with the Yellowstone Park, passes within a mile of the camp site.

The Wyoming lands offer the following advantages: first, an almost unlimited area of open country; second, an adequate supply
of water under gravity pressure; third, an ideal climate, with little cloudy weather, no oppressive heat, and cool nights; fourth, proximity to an improved highway which leads to the celebrated Jackson's Hole country, the Yellowstone Park, and to agricultural districts where mess supplies may be purchased; fifth, the beautiful mountains surrounding the valley of the Hoback River in which the camp is situated, which offer unlimited opportunities for exploration. The camp is within thirty-five miles of the celebrated Teton Mountains and seventy-five miles from the southern boundary of the Yellowstone Park.

All of the buildings at the camp have concrete floors and sheet steel superstructure. In addition to residence buildings, fourteen feet square, larger buildings for general use have been erected. Among these are a dining room and kitchen, a keeper's residence, instrument room, shop, and a garage. Each residence building is furnished with a stationary washbowl, a coal stove, bed and bedding, four chairs, and a table. The camp has electric lights, hot and cold showers, and a modern sanitary system.

In 1936 instruction begins on Monday, June 29. Students should reach the camp on the preceding Saturday. Instruction runs for five and one-half days per week for eight weeks. Field conditions are so satisfactory that all instruction may relate to surveys for a single important project. The camp is open to students coming adequately prepared from any college of engineering. Necessary preparatory training with an outline of the work covered at the camp and other information is contained in a special circular which may be obtained upon application. Eight hours of credit are given those who complete the regular course, Surveying 3. For those unable to complete a two-hour course in practical astronomy, as a part of their preparation, a second course of two hours, Surveying 6, given at the Camp, must be elected.

Students should be able to complete the camp work at a cost of about $150. The University fee is $42. The cost of board is approximately $45. This leaves a balance of practically $60, which should cover round trip transportation costs from almost any part of the United States and leave a balance which would enable students to visit the Yellowstone Park and other points of interest. The estimated cost of travel is made on the assumption that from three to four persons travel together in one car.

Further information may be obtained by writing to Professor C. T. Johnston, 209 West Engineering Building, Ann Arbor, Michigan. Camp Davis mail address is Jackson, Wyoming; freight and express, Victor, Idaho.

Combined Courses have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.
Advice to Students of other colleges and universities with regard to planning their courses before coming to the University is to be found in section 14.

Military Science.—The attention of prospective students in Geodesy and Surveying is called to the Reserve Officers Training Corps. Those who consider taking military science are urged to enroll at the beginning of their course. For further details see section 66.

CURRICULUM IN GEODESY AND SURVEYING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Geodesy and Surveying) are required to complete the curriculum detailed below. For the definition of an hour of credit see section 50.

SUMMER SESSION

Surveying 3                  8

*If modern language is elected, it may be classified here and the English postponed. See section 51.
† See note section 56.
‡ Physical education twice a week throughout the year (without credit in hours) is required of all first-year students, unless military science (one hour credit each semester) is elected as a substitute. Military science is for a period of four semesters.
### Courses in Surveying

1. **Surveying.** Fundamental theory and practice; note keeping; verniers; linear measurements; angle reading; traverse surveying; computing areas; straight line; circular curves; differential leveling; continuous leveling; profile; grade stakes; vertical curve. Lectures, text assignments, recitations, three four-hour periods of field practice. Required of students of geodesy and surveying and civil engineering. *Prerequisite: Math. 4.* Three hours credit. Each semester.

2. **Surveying.** Topographic field work; stadia; plane table; mapping from transit and plane table notes; theory of cross-sectioning and earthwork calculation; triangulation; adjustment, design, and care of instruments. Lectures, text assignments, recitations, field practice, drawing. Two recitations and two four-hour field or drawing periods. Required of students of geodesy and surveying and civil engineering. *Prerequisite: Surv. 1.* Four hours credit. Each semester.

3. **Surveying.** See Summer Session courses.

4. **Surveying.** Elementary theory and practice; use of instruments; reading verniers and angles; running straight lines; traverse survey; computing areas; leveling; profile; grade stakes; note keeping. Lectures, text assignments, one recitation, and one four-hour field period. Required of all students in aeronautical, marine, and mechanical engineering. *Prerequisite: Math. 4.* Two hours credit. Each semester.

5. **Least Squares.** Theory of least squares; adjustment and comparison of data; computation of triangulation systems; determination of empirical formulae. Lectures, text, problems, recitations. *Prerequisite: Math. 37.* Two hours credit. Each semester.

6. **Surveying.** See Summer Session courses.

7. **Municipal Surveying.** Surveys for street location, fixing grades, paving, sewers, property lines; subdivision planning and laying out; state laws relating to municipal surveys. Lectures, text,
drawing, one recitation and one four-hour field period. **Prerequisite:** *Surv. 3*. Two hours credit. Each semester.

9. **Railway Surveying.** Text, field, track problems. One recitation and one four-hour field period. **Prerequisite:** *Surv. 3*. Two hours credit. Second semester.

12. **Surveying.** Similar to Surveying 1 with drawing work added. Designed for forestry students. Lectures, text, recitations, field. Three four-hour field periods, and one one-hour drawing period. **Prerequisite:** *Math. 4*. Four hours credit. First semester.

13. **Surveying.** Similar to Surveying 2. Designed for forestry students. Lectures, text, two recitations, and two four-hour field or drawing periods. **Prerequisite:** *Surv. 12*. Four hours credit. Second semester.

21. **Photography. Basic Course.** Development of photography; cameras and equipment; the nature of light and lenses; exposure of the sensitive material; theory of development; organic developing agents; development of negatives; printing; enlarging and reducing; lantern slides; fixing and washing; defects in negatives; reduction and intensification. Lectures, reference work, one hour recitation and one four-hour laboratory period. **Prerequisites:** elementary chemistry and physics. Two hours credit. Each semester.

22. **Photography and Camera Surveying.** Camera surveying; mapping; principles of aerial photography; stereoscopy; principles of photoengraving; infrared photography; photomicrography; photomacrography; natural color photography; color work; toning of developed images; printing with salts of iron and platinum; orthochromatics; sensitometry. Lectures, reference work, one hour recitation, and one four-hour laboratory period. **Prerequisites:** *Surv. 21 and Surv. 2 or 13*. A section in advanced photography is offered for students having no training in surveying. Arrangements should be made with instructor for admission into this section. Two hours credit. Each semester.

23. **Map Projections and Sketching.** Map projections with special reference to the polyconic system; exercises in topographic mapping and sketching. Lectures, reference work, recitations, problems. **Prerequisite:** *Surv. 3*. Open to fourth- and fifth-year students only. Three hours credit. First semester.

31. **History of Administrative Departments.** History and organization of national and state departments which conduct extensive surveys. Lectures, reference work. **Prerequisite:** *Surv. 3*. Open to fourth- and fifth-year students only. Two hours credit. First semester.
32. **Land Law.** Legislation relating to registration of land titles and estates; acquiring of title to property; essential elements of deeds; application. Lectures, reference work. **Prerequisite:** Surv. 3. **Open to fourth- and fifth-year students only.** Three hours credit. First semester.

33. **Land Law.** Law of boundaries; adverse possession; prescription and prescriptive rights; easements and rights of way. Lectures, reference work. **Prerequisite:** Surv. 32. **Open to fourth- and fifth-year students only.** Three hours credit. Second semester.

34. **Registration of Land Titles.** Legislation relating to the registration of land titles; Torrens Act of Australia and modifications as adapted to conditions of other countries. Lectures, reference work. **Prerequisite:** Surv. 3. **Open to fourth- and fifth-year students only.** Three hours credit. Second semester.

35. **Boundary Surveys.** Boundary surveys from a legal standpoint; boundary surveys in this country and abroad; problems relating to the establishment of boundaries uncertain due to obliteration of monuments, errors in surveys, inaccurate descriptions in deeds, or to other causes. Lectures, reference work. **Prerequisite:** Surv. 3. **Open to fourth- and fifth-year students only.** Three hours credit. Second semester.

36. **Riparian Boundaries.** Uncertainty of riparian boundaries as now defined by court decision under the Common Law; method of definite determination of riparian boundaries. Lectures, reference work. **Prerequisite:** Surv. 3. **Open to fourth- and fifth-year students only.** Three hours credit. Second semester.

**COURSES IN GEODESY**

1. **Geodesy.** Introductory course; history; elements of modern practice and its application to several branches of surveying. Lectures, text, recitations. **Prerequisite:** Surv. 3. **Open to fourth- and fifth-year students only.** Three hours credit. Second semester.

2. **Geodesy.** Methods employed and field covered by the United States Coast and Geodetic Survey. Lectures, reference work. **Prerequisite:** Geod. 1. **Open to fourth- and fifth-year students only.** Two hours credit. Second semester.

**Summer Session**

3. **Surveying.** Adjustment of instruments; astronomical applications, time, azimuth, latitude, and longitude; lines of communication, circular and easement curves, profiles, topography, grades, cross-sections; baseline measurement; triangulation; public land surveys; topography; project surveys; computation of field data; making of maps and diagrams; preparation of permanent records of work per-
formed; camp construction and maintenance and many things which
close to the welfare of those who live in the open. Field problems,
with five and one-half days a week. Prerequisites: Surv. 1
and 2, or 12 and 13; Astron. 35. See section 19 relating to fees.
Eight hours credit. Summer camp.

48. Surveying. Use of instruments, same as Surveying 4; given
at Ann Arbor. Lectures, text, one recitation, and one four-hour
field period. Prerequisite: Math. 4. Two hours credit. Summer
Session.

6. Surveying. Given only at Camp Davis. Credit two to eight
hours, depending upon the character of the work.

79. MATHEMATICS

Professors Hildebrandt, Bradshaw, Field, Love, and Running;
Associate Professors Ayres, Hopkins; and Poor; Assistant
Professors Churchill and Rouse; Dr. Dushnik, Dr. Kaltenthaler;
Mr. Kazarinoff, and Dr. Miller.

The object of the work of this department in the College of
Engineering is not only to impart to the student the mathematical
knowledge requisite for the study of the various branches of engi-
neering, but also to train his mind in the methods of precise reason-
ing and accustom him to the proper application of general principles
to particular cases.

Much time is devoted to the solution of problems in order to
combine a fair knowledge of the elementary principles of higher
mathematics with the necessary facility in applying these principles
to concrete cases. The classes are divided into sections as small as
practicable, so as to make it possible for the instructor to give his
individual attention to the students.

The required work is practically the same for all students of
engineering, and extends throughout the first two years. The first
year is devoted to advanced algebra, and plane and solid analytic
geometry; the second, to differential and integral calculus. An intro-
duction to differential equations is required in certain departments.
Students who do not have credit in trigonometry are required to
complete this subject as early as possible.

For students who desire to pursue their mathematical studies
beyond the required work, a considerable number of advanced elec-
tive courses are offered.

Complete offerings of the Department of Mathematics will be
found in the Announcements of the College of Literature, Science,
and the Arts, and of the Graduate School.

There is an increasing demand in the engineering industries and
in the faculties of technical schools for graduates who have taken
considerably more mathematics and mechanics than is required in
the other engineering curricula. To meet this demand, the following program has been provided:

CURRICULUM IN MATHEMATICS AND REQUIREMENTS
FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Mathematics) are required to complete the following curriculum:

a) **Preparatory Courses**

<table>
<thead>

Students in chemical engineering who become candidates for degrees in both chemical engineering and mathematics are permitted to make the following substitutions:

1. They may substitute twelve hours of chemistry (beyond Chem. 5E) for the following courses at present required in the mathematics curriculum: Eng. Mech. 3 and 4, Civil Eng. 2, and Surveying 1.
2. They may select any two of the following three substitutions in the regular chemical engineering curriculum:
   a) Substitute advanced mathematics for Mech. Eng. 2a, three hours.
   b) Substitute advanced mathematics for Economics 173, three hours.
   c) Substitute advanced mathematics, four hours, and Chem. 63, four hours, for Chem. 67E and 69E, eight hours.

3. In special cases other substitutions, approved by both the Chemical Engineering and Mathematics Departments, may be made.

COURSES IN MATHEMATICS

*3. Algebra and Analytic Geometry. Review of exponents, radicals, quadratic equations, systems of equations involving quadratics; theory of equations including Horner's method; determinants; complex numbers; curve tracing and locus problems in Cartesian and polar coordinates; straight line; circle. Four hours credit. Each semester.

4. Plane and Solid Analytic Geometry. Conic sections; change of axes; properties of conics involving tangents, diameters, asymptotes, parametric equations; surface tracing and locus problems in space; direction cosines; plane; straight line; quadric surfaces; space curves. Four hours credit. Each semester.

*7. Algebra and Trigonometry. Review of elementary operations; factoring, fractions; linear equations in one unknown; simultaneous linear equations; exponents; radicals; quadratic equations; systems of equations involving quadratics; progressions; binomial theorem; trigonometry, the same as in Math. 8. Four hours for two hours credit. Each semester.

*8. Trigonometry. Radian measure; coordinate system; trigonometric ratios; trigonometric identities and equations; inverse functions; graphs; reduction and addition formulas; laws of sines, cosines, and tangents; theory and use of logarithms; orthogonal projections; solution of triangles. Two hours credit. Each semester.

9. Solid Analytic Geometry. Surface tracing and locus problems in space; direction cosines; plane; straight line; quadric surfaces; space curves. Two hours credit. First semester.

36. Calculus I. Functions; limits; continuity; derivative; differentiation of algebraic functions; geometric applications; trigono-

*Students entering with credit in trigonometry will take Course 3. Students entering without trigonometry will take Course 7, except that those whose high-school records show unusual proficiency in mathematics may take Courses 3 and 8 instead. Permission to do this must be obtained from the Department of Mathematics at the time of classification.
nometric, exponential, and logarithmic functions; differential; curvature; time rates; indeterminate forms; curve tracing; introduction to the indefinite integral. Four hours credit. Each semester.

37. Calculus II. Indefinite integral; definite integral; definite integral as the limit of a sum; centroids; moments of inertia; infinite series; Maclaurin’s series; Taylor’s series; partial differentiation; multiple integrals. Prerequisite: Course 36, or equivalent. Four hours credit. Each semester.

39. Differential Equations. Simple types of ordinary equations of the first and second order; linear equations with constant coefficients; applications to geometry and mechanics. Prerequisite: Course 36. Four hours credit. Each semester.

109. Graphical Calculus and Differential Equations. Graphical differentiation and integration; method of least squares; graduation of data by the principle of areas; determination of weights of data obtained by different observers; graduation of weighted data; differential equations of chemical reactions of the first and of the second orders; graphical solution of differential equations. This is mostly a problem course planned for chemical engineers. Three hours credit. Each semester.

110. Elementary Course in Complex Variables. Operations on complex numbers; limit; convergence; continuity; derivative; conformal representation; integration; Cauchy theorems; power series; elementary functions; singularities. This course is intended primarily for students of engineering and other cognate subjects. Students of mathematics should elect Courses 201 and 202. Prerequisite: calculus. Three hours credit. Second semester.

141. Analytic Mechanics. An introduction to theoretical mechanics and to vector methods in mechanics. No previous knowledge of vectors is assumed, the fundamental portions of vector analysis being developed as required in the study of the following topics in mechanics: rectilinear and curvilinear motion of a point; velocities
and accelerations in the rigid body; relative motion; statics of a rigid body. Three hours credit. First semester.

142. Analytic Mechanics. Continuation of Math. 141. Continued study of theoretical mechanics by vector methods. The differential and integral vector operations developed and employed in the study of theory of attractive forces; free and constrained motion of a particle; free and constrained motion of a rigid body; general principles of mechanics. Three hours credit. Second semester.

145, 146. Celestial Mechanics. Rectilinear motion of a particle; gravitational theory of the sun's heat; central forces; potential and attraction of bodies; problem of two bodies. Problems of three and \( n \) bodies; geometric introduction to the lunar theory; general perturbations; introduction to periodic orbits. Two hours credit each. Throughout the year.

152. Fourier's Series and Harmonic Analysis. The development of Fourier's series, Legendre's coefficients, and Bessel's functions, and their applications to certain problems in mathematical physics. Three hours credit. First semester.

153, 154. Advanced Calculus, I and II (Longer Course). Review of fundamental concepts; continuity; definite and improper integrals; vector analysis; partial differential equations; calculus of variations; complex functions; elliptic integrals; Fourier series; Bessel functions. A student may not receive credit for both Courses 151 and 153, but 154 may follow 151. Three hours credit each. First semester, Course 153; second semester, Course 154.

169. Graphical Methods. Graphical representation of functions; construction of graphical charts; graphical solution of equations; a study of the principles of differential and integral calculus by graphical methods applied to the solution of differential equations. Two hours credit. First semester.

170. Empirical Formulas. Curve fitting; graphical determination of constants in empirical formulas; application of the method of least squares; interpolation; numerical integration. Two hours credit. Second semester.

175. Theory of the Potential. Newtonian attraction, Newtonian and logarithmic potentials, the equations of Laplace and
176. Vector Analysis. A study of the formal processes of vector analysis, followed by applications to problems in mechanics and geometry. Three hours credit. First semester.

177. The Theory of Elasticity. This is a general course in the elastic solid theory. It will be adjusted to the preparation and maturity of the students. Two hours credit. First semester.

178. Hydrodynamics. This is a general course in hydrodynamics. The subject matter will be chosen in accordance with the interest and ability of the students. Two hours credit. Second semester.

241. Applied Mathematics — Engineering Problems. The problem will first be formulated mathematically and then the necessary mathematical theory for a solution will be developed. The problems will be so selected that their solutions will cover a wide field mathematically; such as ordinary and partial differential equations, difference equations, harmonic analysis, and approximate solutions. Three hours credit. First semester.

Summer Session

Courses 3, 4, 8, 36, 37, 170, 176, and 241, or similar courses, will be offered in the Summer Session.
MECHANICAL ENGINEERING

Professors Anderson, Bursley, Emswiler, Hawley, Lay, Sherzer, and Keeler; Associate Professors Nickelsen, Mickle, Good, Gordy, and Marin; Assistant Professors Watson, Lloyd, Kessler, Calhoon, Kohler, and Sams.

Mechanical Engineering is that branch of engineering which, broadly speaking, covers the fields of heat, power, design of machinery, industrial management, and manufacturing problems. Mechanical Engineering may be divided into the following branches:

Steam Power Engineering deals with the theory, design, construction, and operation of the various forms of prime movers using steam as the motive power, and their applications in the modern power house. The problems of combustion of fuels, the application of power and steam in industrial plants, determination of power costs, and similar subjects, may be included under this heading. This branch is so closely allied with electric power engineering that a knowledge of both is essential to the practicing engineer in this field.

Internal Combustion Engineering covers the theory, design, construction, and operation of the various types of engines using gas, oil, or gasoline to generate the motive power; the different types of gas producers, and the application of this form of engine to the generation of power for many purposes. Because of the present-day use of the automobile and airplane, and the development of the oil industry, the field has become very important in recent years.

Hydro-Mechanical Engineering, one of the oldest branches of mechanical engineering, deals with the theory, design, construction, installation, testing, and operation of water wheels, water turbines, centrifugal, and reciprocating pumps.

Heating, Ventilating, and Refrigerating Engineering are included under one general heading because of the similarity in the type of problem involved. Broadly speaking, this group includes the theory, design, installation, testing, and operation of heating, ventilating, air conditioning, and refrigerating plants. Among the specific applications would be the heating and ventilating requirements of buildings for various uses. Problems relating to compressed air are also considered in this group.

Automobile Engineering.—The University of Michigan has a strategic location at the center of the automobile industry in this country, and particular attention has been directed toward the development of courses in this branch of engineering. Work in this field covers the general principles of operation, theory and design of the automobile engine and other chassis units, and laboratory and road
tests of the various component parts of the automobile or of the complete automobile itself.

**Industrial Engineering** deals with industrial plant operation and management, efficiency and safety methods, production, and the business side of manufacturing. This branch of engineering, while old in principle, has not been generally recognized until recent years, but now commands an important place in the engineering field.

**Machine Design.**—While design is included in practically all branches of mechanical engineering, and is therefore a necessary adjunct to those branches, there is also the general field for the man who wishes to follow machine design either as technical designer or as a manufacturer of machinery. The very general application of automatic machinery to manufacturing methods has established a definite need for good designers.

**The Department of Mechanical Engineering** of this University endeavors to give the student a thorough training in the fundamental principles of the basic mechanical engineering subjects. Most of the time of the first two years, and a part of the third year, is spent in a study of the foundation courses such as mathematics, economics, English, physics, chemistry, drawing, and mechanics. In the third and fourth years, required courses in heat engines, machine design, mechanical laboratory, thermodynamics, hydraulics, and power plants supplement the foundation courses. The Department recognizes the fact that no student can properly expect to specialize in any branch of engineering in four years of college work. The fourth year, however, allows some opportunity, if desired, for selection of special courses in one or more of the mechanical engineering branches. Graduate work is encouraged, and a number of advanced courses are offered for those who plan to spend more than four years, or for graduate students from this and from other universities. It has been the policy of this department to keep in close touch with the actual needs of the graduate student, and as far as possible to give him the training that will fit him for the immediate future. Most of our graduates are absorbed immediately by the industries, and a friendly relation of mutual benefit is always maintained with these industries. Graduate mechanical engineers very rapidly rise to positions of responsibility in the industries, and a broad general course as well as a technical course is of great value to them in their advancement. For this reason students are urged to elect courses in several departments of the Engineering College, and also in the College of Literature, Science, and the Arts.

**FACILITIES FOR INSTRUCTION**

It is recognized by this department that the principal benefits to be derived from a college training are dependent more upon the character of the instruction than upon physical equipment. The
importance of certain apparatus for purposes of illustration, demonstration, and testing is, however, apparent in some lines of work, and the Department aims to include a sufficient amount of laboratory instruction to supplement properly the work of the classroom.

The Mechanical Engineering Laboratory is located in the West Engineering Building and has a floor space of approximately 13,000 square feet. It is devoted to experimental work in connection with the testing of engines, boilers, pumps, fans, air compressors, hydraulic machinery, and internal combustion engines. The very complete and modern Washington Street power plant which furnishes heat and power to the University buildings, is also available for inspection and special investigations by advanced students. (For description see section 41.) Occasionally tests are made of outside plants in the vicinity of Ann Arbor.

The laboratory, as a whole, comprises all the equipment utilized for illustration of the theory involved in mechanical engineering and for experimental work of both standard and research nature. The laboratory is well equipped with power machines of all kinds, which furnish the means of instruction in the principles of testing. Separate laboratory instruction is given along the lines of automotive work, and that part of the equipment applying especially to this division is segregated to form the automotive division of the laboratory.

For hydro-mechanical work the laboratory is equipped with a pair of 600-cubic-foot tanks on scales, a large Duplex pump, a Doble tangential water wheel, two Rees Roturbo pumps, three single-stage centrifugal pumps, two electric dynamometers arranged for direct connection to centrifugal pumps, and all necessary accessories for testing.

The Automotive and Internal Combustion Engine Laboratory is located in the Engineering Annex. Its function is to familiarize the student with testing equipment and procedure and to allow him to determine for himself many of the facts and principles studied in the classroom. The operating equipment includes some twenty-five internal combustion engines, operating on the Otto or Diesel cycle, which are typical examples of those used in automobiles, trucks, tractors, railcars, airplanes, marine service, and Diesel power plants. These engines, as well as several trucks, cars, and chassis, are made available through the cooperation of the manufacturers and the Federal Government.

The test equipment includes six electric dynamometers with capacities varying from 30- to 300-horsepower, water and fan brakes, and several engine test stands of the reaction type. A chassis dynamometer with six-foot drums is available for tests of a complete motor vehicle. The N.A.C.A. universal test engine provides opportunity for study of the engine cycle and combustion. A full comple-
ment of auxiliary instruments is available for laboratory or road tests of the complete transportation unit or any of its component parts.

In the display or museum section may be found typical examples of automotive equipment, from complete chassis down to the smallest parts. This apparatus, mounted and sectioned to show clearly its construction and operation, is used for class demonstration and service as a permanent exhibit open to the public.

Combined Courses have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.

Advice to Students of other colleges and universities, with regard to planning their courses before coming to the University, is to be found in section 14.

Military Science and Tactics.—Students who plan to take courses in military science are urged to enroll in the beginning of the freshman year, and in doing so should consult with the officer in charge of this department, and also with the head of the department in which he proposes to take his degree. For information regarding the work in Military Science and Tactics see section 66.

CURRICULUM IN MECHANICAL ENGINEERING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Mechanical Engineering) are required to complete the following four-year curriculum.

For the definition of an hour of credit see section 50.

FOUR-YEAR CURRICULUM

Selection of Elective Courses

The sixteen hours of elective work are to be filled partly by "Restricted Electives" and partly by "Free Electives."

a) Restricted Electives:

The student, unless taking the five-year mechanical and industrial curriculum, must elect one 3-hour design course from the following list: Mech. Eng. 9a, 11a, 15a, 16a, 17a, 20a, 25a, 30a, 31a. Of this group, Mech. Eng. 15a must be preceded or accompanied by 15. Mech. Eng. 30a and 31a must be preceded by the corresponding classroom course and by Mech. Eng. 29.

Students who elect a design course other than Mech. Eng. 15a, 30a, or 31a, must also offer credit for graduation in some additional mechanical engineering course from the following list:

b) Free Electives:

The remaining elective hours may be filled by courses offered by any department in the Engineering College or by any College or School in the University to which the student is eligible, subject to the approval of the Head of the Mechanical Engineering Department.
In the selection of his elective hours the student is urged to broaden his training by making elections in other departments of work, and in so doing should consult freely with the members of the Mechanical Engineering staff.

‡Physical education twice a week throughout the year (without credit in hours) is required of all first-year students, unless military science (one hour credit each semester) is elected as a substitute. Enrollment in military science is for a period of four semesters.
FIVE-YEAR CURRICULUM IN MECHANICAL AND INDUSTRIAL ENGINEERING

A five-year curriculum, including courses in economics and business administration in addition to courses in mechanical engineering, is planned as described below. The degree of Bachelor of Science in Engineering (Mechanical Engineering) is given at the end of the fourth year. For the fifth year, registration must be made in the Graduate School; on the successful completion of this year, the degree of Master of Science (Industrial Engineering) is awarded.

* For nontechnical elective see section 51.
COURSES IN MECHANICAL ENGINEERING

2a. Elements of Machine Design. The application of the theories of strength and rigidity to machine elements, and a study of the transmission of power by them. This course covers keys and cotters, screw fastenings, power screws, shafts, rigid and flexible couplings, journals and bearings, gears, belts, clutches, brakes, and flywheels. Three one-hour recitations a week. Prerequisite: Eng. Mech. 2. Not open to any student required to take Mech. Eng. 6 or any advance design courses in the Department of Mechanical Engineering. Three hours credit. Each semester.

3. Heat Engines. Elementary thermodynamics, fuels and combustion, and the principles involved in the application of heat to the various forms of heat engines including the steam boiler, the steam engine, the steam turbine, the internal combustion engine, and plant auxiliaries. Required of all engineering students. Lectures, recitations, problems. Prerequisites: Phys. 45 and 46, and Math. 36. Four hours credit. Each semester.

3a. Mechanical Engineering Laboratory. An elective course for students who are not required to take Mech. Eng. 7, intended to give an insight into methods of testing and to exemplify some of the principles of power engineering. Prerequisite: preceded or accompanied by Mech. Eng. 3. One hour credit. Each semester.

3c. Heat Engines. (For students in chemical engineering.) This course is similar in content to Course 3, but omits fuels and combustion, includes work on refrigeration and refrigerants, and stresses thermodynamics. Prerequisites: Phys. 45 and 46, Math. 36, and Chem. Eng. 2. Four hours credit. Each semester.

7. **Mechanical Engineering Laboratory. First Course.** Elementary testing of a steam engine, steam turbine, oil engine, power pump, and steam boiler; the use and calibration of instruments; and the calculation and interpretation of results. Laboratory, computation, and a few reports; two periods of four and one-half hours each a week. **Prerequisites:** Eng. Mech. 1, preceded or accompanied by Mech. Eng. 3, and accompanied by Chem. Eng. 10. Two hours credit. Each semester.

8. **Mechanical Engineering Laboratory. Second Course.** Experimental study of a steam turbine, Diesel engine, fan, steam injector, air compressor, refrigerating plant, Unaflow steam engine, centrifugal pump, and impulse water turbine. Laboratory, computations, and a few reports; two periods of four and one-half hours each a week. **Prerequisites:** Mech. Eng. 7, and preceded or accompanied by Mech. Eng. 5. Three hours credit. Each semester.

9. **Power Plants.** A study of the engineering, operation, and economics of power plants. Lectures, recitations, and problems. **Prerequisite:** preceded by Mech. Eng. 3. Open to senior and graduate students. Three hours credit. Each semester.

9a. **Design of Power Plants.** A study of the type, capacity, and arrangement of equipment to meet the requirements of a modern steam power plant. The drafting-room work consists of a layout of the power house, and includes setting and piping plans for all the principal machines to be installed. Computations and drawing; two four-hour periods a week. **Prerequisites:** Mech. Eng. 9 and Eng. Mech. 4. Three hours credit. Second semester.

11. **Steam Boilers.** A study of commercial types of boilers, stokers, and superheaters; principles of boiler economy and operation; combustion of fuels; theory of heat transference; purchase of coal by specifications; storage of coal; feed-water treatment; problems of design. Lectures, recitations, problems. **Prerequisite:** Mech. Eng. 3. Three hours credit. First semester.

11a. **Design of Steam Boilers.** This course covers the design of boilers of different types, including calculations and drawing of important details. Drawing, problems; two four-hour periods a week. **Prerequisite:** Mech. Eng. 2. Not open to students below the senior year. Three hours credit. Second semester.
13. **Steam Turbines.** A study in the application of the laws of thermodynamics, fluid flow, and kinetic effects to the steam turbine. Various types and forms of turbines and different applications including electric generation and marine propulsion are considered. About 20 per cent of the time is devoted to a study of the general principles of governing. Lectures, recitations, problems. **Prerequisite:** Mech. Eng. 5. Three hours credit. First semester.

14. **Aircraft Power Plants.** A study of the construction and operation of aircraft engines and their auxiliaries. A descriptive course including critical discussion of the reasons for the various types of construction now in service. **Prerequisite:** preceded or accompanied by Mech. Eng. 3. Three hours credit. Each semester.

15. **Internal Combustion Engines.** Theory of Otto and Diesel engines; thermodynamics; fuels; combustion; carburetion; ignition; injection; cooling; lubrication; starting; performance; engine mechanics; balancing and vibration. Discussions, problems. **Prerequisites:** Eng. Mech. 3, and preceded by Mech. Eng. 5. Three hours credit. Each semester.

15a. **Design of Internal Combustion Engines.** Calculations, design of important details, and layout drawings of a standard Diesel or Otto type internal combustion engine. Drawing, problems; two four-hour periods a week. **Prerequisites:** Mech. Eng. 2 and Mech. Eng. 15. Three hours credit. Each semester.

16. **Water Turbines.** A course covering the hydrodynamic theory of the operation of the various types of water turbines. Considerable attention is given to the analysis of test data and the selection of turbines for various operating conditions. Lectures, recitations, problems. **Prerequisite:** preceded or accompanied by Mech. Eng. 4. Three hours credit. First semester.

16a. **Design of Water Turbines.** This course includes calculations and drawings for runners, guide vanes, draft tubes, etc., with special attention given to the layout of runners. Two four-hour periods a week. **Prerequisite:** Mech. Eng. 2. Three hours credit. Second semester.

17. **Pumping Machinery.** An advanced course covering the theory and operation of reciprocating and centrifugal pumps, the application of pumps to definite pumping problems, economic considerations, and graphical methods. Lectures, recitations, problems. **Prerequisite:** Mech. Eng. 4. Three hours credit. Second semester.

17a. **Design of Pumping Machinery.** This course includes calculations and drawings for a centrifugal or reciprocating pump. Special attention is given to the design of runners, casings, and valves. Two four-hour periods a week. **Prerequisites:** Mech. Eng. 4

18. Heating and Ventilation. A study of the theory, design, and construction of hot air, direct and indirect steam, hot water and fan heating systems, air conditioning, and temperature control. Lectures, recitations. For architects only. Two hours credit. First semester.

19. Refrigeration and Air Conditioning. A study of the theory, design, and construction of refrigerating equipment; characteristics of various refrigerants; the application of refrigeration to cold storage, ice-making, and air conditioning; the fundamental principles of air conditioning; air-conditioning equipment. Lectures, recitations, problems. Prerequisite: Mech. Eng. 5. Three hours credit. Second semester.

20. Materials Handling and Factory Transportation. A study of materials handling equipment and its application in modern industrial plants. Considerable time is devoted to the economics involved in the use of mechanical handling equipment and also to the effect on labor. Lectures, recitations, problems, reports, and plant inspection. Prerequisite: Mech. Eng. 2. Two hours credit. Each semester.

21a. Design of Machine Tools. A complete layout of a modern machine tool is made, and the type and form of material for each part is determined. Bearings, lubrication, clutches, motor mountings, controls, etc., are studied. Computations for strength and rigidity are based on the maximum power and cutting force anticipated. Complete power transmissions for speeds and feeds are designed. Final manufacturing drawings include dimensions, tolerances, and allowances. Two four-hour periods a week. Prerequisite: Mech. Eng. 6. Three hours credit. Second semester.

22. Research in the Mechanical Laboratory. Opportunity for advanced experimental study along any line of work in which student may be specializing; consists of investigations for securing data on more difficult problems of mechanical engineering; student is left largely to own resources in planning and carrying out work. Laboratory. Prerequisite: Mech. Eng. 8. Two or three hours credit. Each semester.

23. Hydraulic Machinery. Opportunity for advanced experimental study along any line of work in which student may be
specializing; consists of investigations for securing data on more difficult problems of hydromechanical engineering; student left largely to own resources in planning and carrying out work. Laboratory. 

Prerequisite: Mech. Eng. 4. Two or three hours credit. Each semester.

25. Heating and Ventilation. Theory, design, and installation of hot air, direct and indirect steam, hot water, and fan heating systems; central heating; air conditioning; and temperature control. Lectures, recitations. Prerequisite: Mech. Eng. 3. Two hours credit. Second semester.

25a. Design of Heating and Ventilating Systems. The student is given the usual data furnished the heating and ventilating engineer. He then makes a layout of piping, ducts, auxiliary apparatus with computations for the size of principal equipment. Two four-hour periods a week. Prerequisite: Mech. Eng. 3. Three hours credit. Second semester.

29. Automobile and Motor Trucks. Fundamental principles of construction, operation; application in current practice; engine cycle, details of construction, cooling, lubrication, carburetion, electrical systems, clutch, transmission, axle, differential, steering, springs, brakes; engine and car testing, performance curves, operation and control. Lectures, recitations, laboratory demonstrations. Not open to students below junior year. Three hours credit. Each semester.

30. Automobile and Truck Engines. The student selects the type of car or truck; makes expectancy curves for engine performance; then computes the dimensions and sketches principal parts. Lectures, problems, drawing. Two four-hour periods a week. Prerequisites: Mech. Eng. 6 and 29. Three hours credit. First semester.

31. Design of Automobile and Motor Truck Chassis. The student selects the type of engine for assumed conditions, then computes the dimensions and sketches the principal parts of the

Prerequisite: Mech. Eng. 31. Three hours credit. Second semester.

32. Automotive Laboratory. An experimental study of automobile and aircraft engine construction, horsepower, fuel economy, thermal efficiency, mechanical efficiency, heat balance, indicator cards, carburetion, compression ratio, and electrical systems. Road tests of car performance include speed range, acceleration, braking, and fuel mileage. Laboratory, reports. Two periods of four and one-half hours each a week. Prerequisites: Mech. Eng. 7 and 29 or 15. Three hours credit. Each semester.

33. Advanced Automobile Testing and Research. An opportunity for advanced experimental and research work. The student is left largely to his own resources in planning apparatus and in carrying out the work. Laboratory, reports. Prerequisite: Mech. Eng. 32. Two or three hours credit. Each semester.

34. Advanced Automobile Design and Research. Special problems in the design of some automobile or truck unit. Drawing. Prerequisites: Mech. Eng. 30 and 31. Credit and hours to be arranged. Each semester.

35. Factory Management. This course deals with management problems and methods involved in the operation of manufacturing institutions. The topics considered are: location, layout, equipment investment, motion study, time study, methods of wage payment, inspection, organization procedures, production control, material control, and budgets. Lectures, recitations, and problems. Not open to freshmen and sophomores. Three hours credit. Each semester.

36. Factory Management—Purchasing. This course consists of a comprehensive treatment of the principles involved in purchasing. The following topics are considered: inventory management, selection of sources, price analysis, standards and specifications, organization of a purchasing department, government regulations and buying policies applied to specific materials. Some attention will be devoted to the economics of freight transportation. Lectures, recitations, and term report. Prerequisite: Mech. Eng. 35. Three hours credit. Second semester.

37. Special Topics on the Internal Combustion Engine. This course affords the student an opportunity of investigating certain features of the theory, design, and construction of internal combustion engines according to his interests. Reading, reports. Prerequisite: Mech. Eng. 15. Two hours credit. Each semester.
38. Internal Combustion Engineering. Research work on Diesel or other types of internal combustion engines. Laboratory. 
Prerequisites: Mech. Eng. 15 and 8 or 32. Credit and hours to be arranged. Each semester.

39. Internal Combustion Engineering. Research design of parts or units requiring special study. Prerequisite: Mech. Eng. 15a. Credit and hours to be arranged. Each semester.

40. Factory Management. Field Work. The principles of production developed in Mech. Eng. 35 and 36 are in this course applied to specific problems in factory management. The course will consist of inspection trips to manufacturing plants, with problems and discussions based on these trips. Three hours credit. First semester.

41. Automobile Engineering Seminar. The student prepares one paper on current topics of the automobile industry and one covering an investigation of some special subject. Reading, preparation of papers, and class discussions. One hour credit. Each semester.

42. Factory Management—Motion and Time Study. Attention is devoted to operating methods, to work center layout according to the laws of motion economy and to time-study technique. Exercises in the laboratory and in a cooperating manufacturing plant constitute the work of the course. Three hours credit. Second semester.

55. **Advanced Thermodynamics.** A continuation of Mech. Eng. 5 consisting of the application of principles to advanced problems in heat engines, air compressors, and refrigerating machines, together with lectures dealing both with engineering phases and the relation of the laws of thermodynamics to modern physical concepts of matter and energy. *Prerequisites:* Mech. Eng. 5 and 8. Three hours credit. Second semester.

**Summer Session**

Courses 2, 3, 6, 7, and 8, or similar courses, are generally given during the Summer Session.

81. **NAVAL ARCHITECTURE AND MARINE ENGINEERING**

Professors Sadler and Bragg; Assistant Professors Adams and Baier.

The work in this Department has for its object the training of men in connection with the design and construction of ships and their machinery, and also of those who may wish to enter the field of water transportation. The three main divisions are as follows:

**Naval Architecture**, which embraces all questions relating to the design and construction of ships, and includes such topics as the displacement and buoyancy, strength, resistance, propulsion, and stability; and methods of solving the general problem of ship design.

**Marine Engineering**, which includes those subjects which deal more particularly with the design and construction of the various types of machinery, such as steam reciprocating, turbine and oil engines, boilers of different types, and auxiliaries.

**Water Transportation**, which deals more specifically with those problems which enter into the selection of types of vessels suitable for various trades and conditions of operation, and which in addition to a general knowledge of the design and construction of vessels, also includes certain studies in economics, finance, and trade.

The Courses offered in the Department are therefore designed to give a student a thorough training in the fundamental problems relating to the marine field, with certain of them open to elective work which may give him a more specific training in the particular line of work which he may wish to follow, in any group.

The Department of Marine Engineering in planning out its course of study has had in mind the fact that the basic work is similar to that in mechanical engineering, with the slight differentiation largely in the fourth year. As a ship represents a floating power plant, fundamental courses in civil, electrical, and chemical engineer-
ing are also included. While recognizing the fact that, in the shipbuilding and shipping industry, men are eventually segregated into the above groups, it has been thought advisable to devote more time to the essentials of the subject, rather than to undue specialization in any one, and to give the student as broad a background as possible. If, however, further specialization is desired, it is recommended that the student return for a fifth year and enter the Graduate School. Facilities for research work are provided in the Naval Tank, or Marine Laboratory, which is unique in this institution.

The Department is in constant touch with all the shipbuilding and shipping establishments, not only in this district, but throughout the country, so as to enable its graduates to obtain positions in the various lines mentioned above.

**Marine Engineering Laboratory.**—On the first floor of the West Engineering Building the east wing contains the experimental tank. This tank is 300 feet long, 22 feet wide, with a depth of water of 10 feet. At the south end is a model room and workshop for the purpose of making models of vessels.

The models used in the tank for testing purposes are from 8 to 12 feet, and are made of paraffin wax and wood. If made of wax a clay mold is first made approximately to the shape desired, and a core inserted. The paraffin is then poured into the mold, and, after cooling, the rough model is taken to the model cutting machine. This machine consists essentially of two moving tables or platforms, upon one of which is placed the model and upon the other the drawing which it is desired to reproduce. The model moves under a pair of rotating cutters, which are made to follow the lines of the drawing. After cutting, it is brought to its final shape by hand, then carefully weighed, and sufficient ballast added to bring it to any desired draft and displacement.

The tank is spanned by a traveling truck which is driven by a motor and can be run at different speeds. Upon this truck are mounted the dynamos for measuring the resistance of the models of various forms at different speeds.

**Combined Courses** have been arranged with Albion, Battle Creek, and Olivet Colleges. For detailed information see section 15.

**Advice to Students** of other colleges and universities, with regard to planning their courses before coming to the University, is to be found in section 14.

**Military Science.** The attention of prospective students in naval architecture and marine engineering is called to the Reserve Officers' Training Corps. Those who consider taking military science are urged to enroll at the beginning of their course. For further details see section 66.
CURRICULUM IN NAVAL ARCHITECTURE AND MARINE ENGINEERING AND REQUIREMENTS FOR GRADUATION

Candidates for the degree of Bachelor of Science in Engineering (Naval Architecture and Marine Engineering) are required to complete the curriculum detailed below. For the definition of an hour of credit see section 50.

*Students electing Group C, Water Transportation, for their group options, will substitute an elective in place of Civil Eng. 2.*
Group Options.—Three groups of studies may be followed in this department, viz.:

Group A, which is arranged for those who wish to devote the principal part of their studies to the design and construction of ships; and

Group B, for those who wish to specialize more in the design of propelling machinery and other machinery connected with ships.

Group C, for those who wish to fit themselves for water transportation work.

* If modern language is elected, it may be classified here and the English postponed. See section 51.
† See note section 56.
‡ Physical education twice a week throughout the year (without credit in hours) is required of all first-year students, unless military science (one hour credit each semester) is elected as a substitute. Military science is for a period of four semesters.
COURSES IN NAVAL ARCHITECTURE AND MARINE ENGINEERING

1. Ships and Shipbuilding. (Primarily for students not in the Department of Naval Architecture and Marine Engineering.) A brief summary of the types of ships, their structure, outfit, machinery, form, and construction. Lectures and recitations. Two hours credit. First semester.

2. Ship Calculations. The following are the topics discussed: methods of determining areas, volumes, centers of gravity of ship-shaped bodies, displacement, centers of buoyancy, metacenters, and trim; statical stability, launching, and water-tight subdivision. Lectures and recitations. Three hours credit. Second semester.

3. Stability of Ships and Preliminary Design. This course includes investigations of the statical and dynamical stability of ships, a discussion of rolling, pitching, and seagoing qualities of ships; a study of rudders and turning, freeboard, tonnage, and strength analysis. The latter part of the course is devoted to estimates and calculations involved in the design of ships. Prerequisite: Naval Arch. 2. Three hours credit. First semester.

4. Resistance and Propulsion. In this course all items affecting the resistance and propulsion of various ships' forms; investigation of the theory and practice involved in the design of propellers; methods of conducting trial trips, etc., are discussed. Prerequisite: Naval Arch. 2. Three hours credit. Second semester.
5. Structural Drawing and Design (formerly Naval Arch. 1 and 5). This course comprises a discussion of the principal features of construction of all types of ships; classification societies' rules; and preparation of some of the principal working structural plans such as bulkheads, deck plating, and stern frame. Practice is also given in fairing the lines for a small vessel. Lectures, recitations, and drawing room. Four hours credit. Each semester.

5T. Structural Drawing. (Primarily for students not in the Department of Naval Architecture and Marine Engineering.) This is a short course similar to the drawing room work given in Course 5. Lines for a small vessel are faired and one structural plan is prepared. One hour credit. Each semester.

6. Ship Drawing and Design. I. The lines of a vessel of an average type are drawn and all the calculations are made which are necessary for plotting curves of form, launching curves, and strength curves. To be accompanied or preceded by Naval Arch. 2. Three hours credit. Each semester.

7. Ship Drawing and Design. II. In this course the student is given the general features of a vessel and prepares a complete design of the same, including all the general plans and calculations. Prerequisites: Naval Arch. 3 and 6. Three hours credit. Each semester.

9. Marine Machinery. It is the purpose of this course to familiarize the student with the different types of machinery used for propelling vessels. A study is made of the steam consumption of reciprocating engines and turbines, and of the capacity of different types of boilers to supply steam for their needs. The use of coal, pulverized coal, and fuel oil in connection with boilers is studied, and also the use of oil in internal combustion engines. The preliminary calculations are made for a triple-expansion reciprocating engine and the sizes of the main parts are worked out. A brief study is made also of condensers and air pumps. Lectures, recitations. Prerequisites: Mech. Eng. 3 and Eng. Mech. 1. Three hours credit. First semester.

10. Marine Boiler Drawing and Design. In this course a Scotch marine boiler of general type is designed. Three hours credit. Each semester.

11. Marine Engine Drawing and Design. The complete general plans of a triple- or quadruple-expansion engine are prepared, together with all calculations for the same. Prerequisite: Mar. Eng. 9. Three hours credit. Each semester.

15. Naval Architecture. Advanced Reading and Seminar. Credit to be arranged.

17. Marine Engineering. Advanced Reading and Seminar. Credit to be arranged.

PHYSICS

Professors RANDALL, WILLIAMS, COLBY, SMITH, SAWYER, GOUĐSMIT, and BARKER; Associate Professors LINDSAY, MEYER, DENNISON, DUFFENDACK, CORK, SLEATOR, and LAPORTE; Assistant Professor FIRESTONE.

The instruction in general physics covers a thorough course with the use of trigonometry and extends throughout an entire year. The first semester is devoted to mechanics, sound, and heat; the second to electricity and light. The subjects are amply illustrated with appropriate experiments accompanying the lectures. One period a week is devoted to laboratory work. The numerous courses, both experimental and theoretical, which the Department offers, are open to students wishing additional work in physics.

WEST PHYSICS BUILDING.—The elementary work in general physics is carried on in the West Physics Building. The first floor contains the laboratories for electricity and light, a recitation room, the storage battery room, and the instrument shop. On the second floor are the large lecture room for demonstrations in general physics, a smaller lecture room, one laboratory for mechanics, consultation rooms, and apparatus rooms. The third floor contains two general laboratories and four recitation rooms.

EAST PHYSICS BUILDING.—Advanced work and research in physics have been removed to the first unit of the East Physics Building, the second unit of which, when built, will contain the large lecture rooms, laboratories, class, and consultation rooms, for the elementary courses. The new laboratory has two wings 144 feet and 132 feet in length and each 60 feet wide. It is of reinforced concrete construction with specially deadened floors. There are four stories, a basement, and a first and second sub-basement, all seven floors connected by an elevator.

Laboratories are provided for heat and high temperature measurements, sound, light and applied optics, radioactivity, electrical
measurements, and vacuum tubes, all supplied with adjacent apparatus, research, and consultation rooms. Sound has a two-story structure extending through the first and second basements entirely disconnected from the walls of the surrounding building. X-ray research has ample quarters in the first and second basements. The high potential generators are housed in a two-story room which permits ready distribution of power to a number of adjacent research rooms. Spectroscopy both in the photographic and infrared regions has a series of laboratories. In addition, there are single- and multiple-unit research rooms available for any purpose. All rooms are provided with numerous storage battery connections and both the 110 v. a-c. and 220 v. d-c., as well as water, gas, and compressed air. Three storage batteries contain altogether 640 cells, and switchboards make possible a universal distribution of power. In addition, there are two instrument shops, a wood shop, a glass-blowing room, and general apparatus rooms. The building also contains necessary offices, four rooms for lectures and classes in advanced courses, a library, and a faculty room.

CURRICULUM IN PHYSICS

The inclusion of a degree in physics, among other degrees offered by this college, has its justification in the rapid introduction of the findings of physics and the methods of physical research into industry. The demand for physicists far exceeds the supply, and is continually increasing. Anyone finding the subject attractive may become an industrial physicist, confident that his profession is one of great usefulness and ever-expanding possibilities.

The schedule of courses leading to the degree of Bachelor of Science in Engineering (Physics) is given below. The Department will be glad to consult with all students interested, both as to the possibilities of the new profession and the particular work best suited to each individual.

Candidates for the degree of Bachelor of Science in Engineering (Physics) are required to complete the following curriculum. For the definition of an hour of credit see section 50.

**COURSES IN PHYSICS**

**Description of Courses.—**For all courses beyond 100, except Physics 130 which requires 45 only, Physics 45 and 46 are prerequisites. The individual courses may have particular prerequisites besides. Physics 45 and 46 are required of all engineering students. Calculus is a prerequisite for courses numbered above 130.

**45. Mechanics, Sound, and Heat.** At least half the semester is devoted to elementary mechanics; the remainder of the time to sound and heat; all with experimental illustrations. Two lectures, three recitations, and one two-hour laboratory period a week.
student is admitted to the class who has not had a preparatory course in physics. A knowledge of plane trigonometry is indispensable. Five hours credit. Each semester.

46. Electricity and Light. A continuation of Course 45. It takes up the fundamental phenomena and laws of electricity and light with ample class illustrations. Physics 45 and 46 are required of all engineering students. Students transferring their credits from the College of Literature, Science, and the Arts will be required to offer Physics 35, 36, 37, and 38 as equivalents of Physics 45 and 46. Must be preceded by Phys. 45 and by Chem. 5E, or an equivalent. Two lectures, three recitations, and one two-hour laboratory period a week. Five hours credit. Each semester.

105. Modern Physics. This course includes descriptions and discussions of many of those fundamental experiments which have established the present viewpoint in physics. Among the topics treated are the nature of light, the quantum theory of its emission and absorption, radioactivity, electron phenomena, elementary theory of specific heats, etc. The treatment is nonmathematical. Only students not specializing in physics may receive graduate credit. Prerequisite: Phys. 36 or Phys. 46. Two hours credit. First semester.

121. X-ray Equipment and Apparatus. This course is intended primarily for students not specializing in physics. The work is partly experimental and will be conducted in the Department of Physics and in the Department of Roentgenology in the University Hospital. It will consist of the study of the underlying electrical principles and the electrical apparatus necessary. The characteristics of x-ray tubes, the production and fundamental principles of x-rays, including demonstration of present-day measuring instruments, x-ray spectra and the practical dosage of x-rays in therapy. Prerequisite: Phys. 36 or Phys. 46. One lecture and one two-hour laboratory period a week. Two hours credit. First semester.

130. Architectural Acoustics. Lectures with illustrative problems on sound transmission, distribution, and absorption, and an experimental study of the acoustic properties of certain rooms. Prerequisite: Phys. 45 or 41 or 35. Two hours credit. Second semester.

147. Electrical Measurements. The course includes the modern methods of measuring current, resistance, electromotive force, capacity, inductance, and hysteresis of iron, and the calibration of the instruments employed. This course is in the curriculum in electrical engineering. Preceded or accompanied by Elec. Eng. 3. Two lectures and one four-hour laboratory period a week. Four hours credit. Each semester.

154. Electrical Measurements. Alternating and transient currents. Measurement of inductance and capacitance by audio-fre-
quency currents and vacuum-tube amplifiers. Alternating current bridge circuits. Application of the bridge to various problems. Hysteresis curves and losses for different kinds of steel. A Rosa curve tracer is used to trace the wave form of alternating currents and voltages. Prerequisite: Phys. 145 or 147. Four hours credit. Second semester.

156. Electron Theory and Radioactivity. The radioactive disintegration of atoms, the nature and properties of alpha, beta, and gamma rays, the determination of the electronic charge, the arrangements of electrons and protons to form atoms, electrical mass, positive rays, isotopes, thermionic currents, and metallic conduction. Two hours credit. Second semester.

158. Radioactivity. The laboratory work is largely with radioactive substances. The distinguishing characteristics of alpha rays, beta rays, and gamma rays are studied, and the half life periods of several substances are determined. One two-hour laboratory period a week. Must be preceded or accompanied by Phys. 156. One hour credit. Second semester.

165. Electron Tubes. The theory of the transmission of electricity through gases and through vacua, together with the different types of tubes and circuits used in radio communication. The characteristics of tubes, the determination of amplifying factors, the different kinds of detector action, and the operation of generator systems. Prerequisite: Phys. 154 or its equivalent; a knowledge of alternating current theory is necessary. Two hours credit. First semester.

166. High Frequency Electrical Measurements. A laboratory course consisting of selected problems. Open to a limited number of students who have had adequate preparation. Two three-hour laboratory periods a week. Prerequisite: Phys. 165. Two hours credit. Second semester.

175. Sound. Lectures and problems covering the theory of vibrating systems, resonance, the use of complex numbers and impedance methods in the discussion of waves and vibrations, the radiation and propagation of sound waves, and subjective phenomena. First semester. Two hours credit.

177. Laboratory Work in Sound. A course to accompany or follow Course 175. The work is devoted to experiments on vibrating systems; to the absolute measurement of sound intensity with the
condenser microphone and thermophone in conjunction with vacuum tube amplifiers and oscillators; to the measurement of ear sensitivity, masking, and minimum perceptible differences; and special problems. First semester. Two hours credit.

181. Heat. The work covers the fundamental principles of thermal phenomena. Expansion, specific heats and temperature, change of state and van der Waals' equation, elementary kinetic theory, and the absolute scale of temperature. Two hours credit. First semester.

182. Measurements of High Temperature. The present methods of high temperature measurement. The calibration and use of various technical types of indicators and recorders, the total radiation and optical pyrometers, and laboratory methods of producing high temperatures. Two hours credit. Second semester.

183. Laboratory Work in Heat. A course to follow or accompany Course 181. The work includes the study of modern accurate methods of measuring various thermal quantities. The gas thermometer, thermopile, interferometer measurement of thermal expansion, measurement of specific heats, heats of fusion and of vaporization, thermal conductivities, etc. Two hours credit. First semester.

186. Light. An intermediate theoretical course treating the subjects of interference, diffraction, law of extreme path and aplanatic surfaces, polarization and double refraction, the nature of white light, and experiments on ether drift. Two hours credit. Second semester.

187. Geometrical Optics. A course in the fundamental methods and principles of geometrical optics and the design of optical instruments. Thick lens optics, the ideal optical instrument, the aberration theory of Abbé, a study of the characteristics of optical instruments and exercises in the design of simple instruments, and discussions of the various types of optical glass. Three lectures or recitations a week and occasional laboratory exercises. Three hours credit. First semester.

188. Laboratory Work in Light. A course to accompany or follow Physics 186. The laboratory work includes the study of refraction, interference, diffraction, the examination of spectra and practice in the use of optical instruments. Four hours a week, Wednesday afternoon. Two hours credit. Second semester.

196. Atomic and Molecular Structure. A review of recent developments in the theory of atomic and molecular structure and the solid state, with numerous references to current literature. Three hours credit. Second semester.
201, 202. **Physics Proseminar.** Discussion groups for the study of the current literature of physics. Recommended for all graduate students in their first year of residence. Required of all candidates for the master's degree. Hours to be arranged. One hour credit each. First semester, 201; second semester, 202.

203, 204. **Molecular Physics.** An introduction to the theory of matter, with emphasis upon the mechanics of gases, mean free path phenomena, and specific heats. Spectroscopy and the quantum hypothesis are presented as tools for the study of the structure and properties of matter. This course is intended primarily for students in Chemical Engineering. *Phys. 203 is a prerequisite for 204.* Three hours credit each semester. First semester, 203; second semester, 204.

205, 206. **Electricity and Magnetism.** A fundamental treatment of electromagnetic theory. Discussion of electrostatic and electromagnetic phenomena on the basis of Maxwell's equations. Theory of electromagnetic waves and radiation from a Hertzian oscillator. The connection with the special relativity theory. *Prerequisite: Phys. 154. Phys. 205 is a prerequisite for 206.* Three hours credit each semester. First semester, 205; second semester, 206.

211, 212. **Quantum Theory and Atomic Structure.** The Bohr formulation of the quantization of multiple periodic systems and its application to atomic spectra (optical and x-ray) and molecular spectra. Heisenberg's uncertainty principle and matrix mechanics. De Broglie waves and the Schrödinger wave equation. Application to physical problems. *Prerequisite: Phys. 196. Phys. 211 is a pre-
requisite for 212. Three hours credit each semester. First semester, 211; second semester, 212.

250. X-rays. The fundamental facts and theories connected with the production and properties of x-rays, together with a study of the development of the subject. X-rays in their relation to theories of radiation and of the structure of matter. Considerable emphasis is placed on spectroscopy, and opportunity is afforded to do some experimental work. Three hours credit. Second semester.

285. German Reading. In this course the subject of physics is studied in German to acquaint the student with the technical terms used in modern German physics. This course may be taken only by such students as convince the instructor of their satisfactory preparation. One hour credit. First semester.

Summer Session

Physics 35, 36, 37, 38, 39, 40, 45, 46, 105, 145, 165, 181, 183, 186, 188, 196, 205s, 207, 247s, 250s, 265s, 280, 281, and 297, or similar courses, will be offered in the Summer Session.

83. ENGINEERING-BUSINESS ADMINISTRATION COMBINED CURRICULUM

The College of Engineering and the School of Business Administration offer a five-year combined course to meet the needs of those students who desire dual preparation in the fields of engineering and business administration. Such preparation seems appropriate because of the complicated economic organization of today and the close practical relationship between business activities and technology. From the point of view of the community there is a growing need of enlightened control by business men of the productive powers developed by engineers and scientists, and it is believed that students who have a balanced training in economics and technology will be able to render valuable services in developing such control. More
specifically, such a combination is desirable for those who look forward to engaging in factory management, industrial personnel management, the marketing of industrial equipment, the management of public utilities, or other businesses in which the scientific and technical aspects are prominent.

The combined course covers the general training in engineering essential for this purpose, together with a complete and well-rounded training in business administration. The course in business administration comprises two years, and ordinarily a bachelor's degree is required for admission to it. Under the combined curriculum, however, a student is registered in the School of Business Administration after the completion of the three-year prescribed curriculum in the Engineering College, with a minimum average grade* of 2.5. Upon the satisfactory completion of the first year of the business administration curriculum, the student will be recommended for the degree of Bachelor of Science in Engineering (Business Administration). Upon the satisfactory completion of the second year in the business administration program, the degree of Master of Business Administration will be granted.

The following schedule for the first three years has been approved by the two faculties as the general requirement for the Engineering-Business Administration Combined Course. Minor modifications or substitutions in the purely engineering courses may be made, subject to the permission of the committee in charge. Students should note that application for admission to the School of Business Administration must be made before April 20, and that the College of Engineering requires a higher average grade for its recommendation for transfer to the School of Business Administration on the combined course than it requires for graduation in the four-year curricula. For the definition of an hour of credit see section 50.

84. ENGINEERING-FORESTRY (WOOD TECHNOLOGY) COMBINED CURRICULUM

The College of Engineering and the School of Forestry and Conservation offer a five-year combined curriculum to meet the needs of students who plan to enter one of the wood-using industries and who desire a broader engineering foundation for their work in wood technology than can be obtained in two years of preparatory work.

This program recognizes the fact that intelligent utilization of wood requires not only a thorough knowledge of its structure, properties, and uses, but also of the machinery and processes involved in its manufacture and treatment.

The combined curriculum aims to turn out well-rounded professional men with sufficient training in both engineering and wood technology to qualify them for effective service as technicians, executives, or investigators in the lumber or other wood-using industries, or in some specific aspect of wood utilization, such as kiln-drying, preservative treatment, or timber testing. The present lack

* Elective courses must be selected from the following group: Economics, Engineering, English, History, Modern Language, Philosophy, Political Science, Psychology, Sociology.
of technical men in the wood-using industries, which rank third or fourth in importance among the major groups of manufacturing industries in the country, leaves ample room for the employment of individuals with a training of this sort, which is not now generally available.

The student in the combined course is registered in the College of Engineering for three years, on the completion of which, with a minimum average grade of 2.5, he is recommended for transfer to the School of Forestry and Conservation. On the satisfactory completion of the first year in that School, the student will be recommended for the degree of Bachelor of Science in Engineering (Forestry-Wood Technology).

Students should note that application for admission to the School of Forestry and Conservation must be made before April 20, and that the College of Engineering requires a higher average grade for the combined curriculum than for graduation in the regular four-year curricula.

On the satisfactory completion of his second year in the School of Forestry and Conservation, and the meeting of that School's specific requirements for graduation, he will be recommended for the degree of Master of Forestry (Wood Technology).

The following schedule, which is based on the four-year program in Mechanical Engineering, has been approved by the two faculties as the general requirement for the first three years of the combined curriculum. Minor modifications or substitutes may be made subject to the approval of the committee in charge.

Students who, during their first three years, follow a program in some other branch of engineering, for example, civil engineering, will be permitted to take advantage of the combined curriculum, provided (a) that during their third year in the College of Engineering they make such substitutions in the regular program as may be approved by the head of the department concerned and by the committee in charge, and (b) that during their first year in the School of Forestry and Conservation they take such supplementary courses in engineering as are similarly approved. For the definition of an hour of credit see section 50.

16
The College of Engineering and the Law School of the University offer a six-year combined course to meet the needs of those members of the bar whose practice is in fields for which an engineering foundation is desirable.

Such fields include patent-law, for which a knowledge of mechanical and electrical devices and of processes is important, and law as affecting the operation and the business of public-service, manufacturing, and other corporations.

There is, moreover, an increasing tendency for graduates in law to engage in the management of corporations. The combined course should therefore be of value to many also who are not actively engaged in the practice of law.

It is believed that many of the studies in an engineering curriculum, such as mathematics, physics, and engineering mechanics, in which the faculty of analysis is trained, are very helpful as preparation for the study of law.

The student in the combined course is registered in the College of Engineering for three years and then in the Law School for a like period. On the completion of the three-year curriculum in the College of Engineering with a minimum average grade\(^*\) of 2.5, the student is recommended for transfer to the Law School. On the satisfactory completion of the first year of the law curriculum, the student will be recommended for the degree of Bachelor of Science in Engineering (Law).

The following schedule for the first three years has been approved by the two faculties as the general requirement for the Engineering-Law Combined Course. Minor modifications or substitutions in the purely engineering courses may be made, subject to the permission of the committee in charge. Students should note that application for admission to the Law School must be made before April

\(^*\) See section 35 for the grading system.
20, and that the College of Engineering requires a higher average grade for its recommendation for transfer to the Law School on the combined course than it requires for graduation in the four-year curricula.

- Undergraduates, College of Engineering: 1,592
- Students in Engineering enrolled in Summer Session of 1935: 279
- Students in Engineering enrolled in the Graduate School: 234
- Students enrolled in Engineering *Extension courses: 92
- Number of students in Engineering, Net: 1,942

*Extension students have been grouped according to Schools and Colleges from which instructors offering courses have been drawn. This does not indicate enrollment of the Extension Division students in the Schools and Colleges.
INDEX

Absence:
  - excuses for, 42
  - leave of, 44
Academic year, 22
Administrative officers, 7
Admission, 24
  - advanced credits, adjustment of, 28
  - to advanced standing, 27
  - on certificate, 25
  - in combined programs, 28
  - on credits from another college, 28
  - deficiencies, 42
  - by examination, 26
  - as a graduate student, 29
  - requirements, 24
  - as a special student, 29
Advanced standing:
  - adjustment of credits, 28
  - admission to, 27
Aeronautical engineering:
  - courses offered, 96-99
  - description of work, 92-93
  - laboratory, 93
  - program, 94-96
  - requirements for graduation, 56, 94-95
Aircraft, 92
Albion College, 21, 28
Algebra, 24, 184
Announcements, 5
Assembly, the, 39
  - absence from, 42
Assistantships, 34
Astronomy:
  - courses offered, 102-103
  - program, 101
Automobile engineering, 188, 201
Automobile regulation, 44
Average grade, 43
Bacteriology, 59
Battle Creek College, 21, 28
Bequests, 53
Board and room, 32
Board of Regents, 7
Boundary surveying, 174
Buildings and other equipment, 46
Bureau of Appointments, 40
Business administration:
  - combined programs with, 21
  - courses in, 60-62
  - program, 219
Calculus, 185, 186
Calendar, 5
Camp Davis, 175-176
Camps, summer, military, 87
Certificates from approved and other schools, 25
Chemical engineering:
  - cooperative course in gas engineering, 118
  - courses in, 119-123
  - description of work, 104-112
  - five-year program, 117
  - four-year program, 113-115
  - graduate work, 105
  - laboratories, 107-109
  - library, 106
  - requirements for graduation, 56, 113
  - summer employment, 111
Chemistry:
  - courses offered, 63-65
Civil authorities, relation of students to, 34
Civil engineering:
  - courses offered, 138-146
  - description of work, 127-129
  - electives, major, 128
  - graduate work, 128
  - laboratories, 129
  - program, 130-135
  - requirements for graduation, 56, 130-132
Classification, 41
Class standing, 27-28
Clements Library, 47
Clubs, see Organizations and Societies
Combined curriculum in engineering and business administration, 21, 218
Combined curriculum in engineering and forestry, 21, 221
Combined curriculum in engineering and law, 21, 225
Combined programs with other institutions, 21
Commencement, date of, 5
Committees, 17
Communication laboratories, 149
Coöperative programs:
  - electrical engineering, 159
  - gas engineering, 112
Courses:
  - in nonprofessional departments, 58-90
  - in professional departments, 91-227
Credit for advanced standing, 27-28
Credit hour, 56
Curricula in professional departments, 20-21
  - aeronautical engineering, 94-96
  - astronomy, 101
  - chemical engineering, 113
  - civil engineering, 130-132
  - combined with business administration, 219-220
  - combined with forestry, 222-223
  - combined with law, 226
  - electrical engineering, 156-157
  - engineering mechanics, 169
  - geodesy and surveying, 177
  - marine engineering, 206
  - mathematics, 183
Curricula in professional departments
(Continued)
mechanical engineering, 191-192
mechanical and industrial engineering, 194-195
metallurgical engineering, 115-116
naval architecture, 206
physics, 212-213
transportation engineering, 135-136
Deficiencies, removal of, 43
Degrees conferred, 56
Departments of instruction:
engineering, general description of, 45
nonprofessional, 58-90
professional, 92-227
Directions and suggestions, 22
Dismissal, honorable, 44
Dispensary, 35
Donovan Scholarship, 52
Drawing:
description of work, 75
mechanism and engineering, 75-76
Dynamics, 170
Dynamo laboratory, 149
Economics, 65-68
Education, 68
Election of studies, rules governing, 41
Electives:
group system of, 92
nontechnical, 56
Electrical communication, 147, 149, 155
Electrical engineering:
cooperative course with industry, 158, 159
courses offered, 159-167
description of work, 147-156
elective work, 154-155
five-year program with industrial engineering, 156
four-year program, 157
laboratories, 149-151
requirements for graduation, 56, 156-157
Electrical engineering design, 147
Electrical power engineering, 147
Emeritus professors, 7
Employment of students, 33
Engineering camp, 175
Engineering defined, 43
Engineering-law curriculum, 21, 225
Engineering libraries, 47
Engineering mechanics:
courses offered, 170-173
description of work, 168-169
laboratory, 168
program, 169
requirements for graduation, 56, 169
Engineering research, 90-91
Engineering Council, 49
English:
courses offered, 69-72
facilities, 68-69
for foreign students, 23, 69
general requirement, 68
library, 47, 69
Enrollment, 19, 228-229
Entrace, see Admission
Examinations:
admission, 5, 26
fee for special, 31
rules governing, 42
semester, 5
Excuses for absence, 42
Executive Committee, 17
Expenses, 32
Experimental flume, 129
Experimental tank, 205
Faculty, 8-17
Fees, 29-31
Fellowships, 34-52
Fine arts, 72
First-year studies in engineering, 58
Five-year programs with business administration, 21, 218
Foreign students, 23
Forestry and conservation:
combined program with, 21, 221
courses in, 72-74
Foundry laboratory, 79
French:
courses offered, 88
description of work, 88
nontechnical electives, 56
Freshman program, 58
Freshman Week, 22
Gas and fuel laboratories, 108
Gas engineering, program in, 112
Gemmell Memorial Scholarship, 52
Geodesy and surveying:
Camp Davis, 175
courses offered, 179
description of work, 173-176
program, 178-179
requirements for graduation, 56, 177
Geology, 74-75
German:
courses offered, 89
description of work, 88
nontechnical electives, 56
Gifts, 53-55
Golf links, 36
Grade average, 43-44
Graduate work, 29, 56, 105, 128, 152, 189
Graduation requirements, 56
Group, electives, 92
Gymnasiums, 36
Health Service, 35
Heating, ventilating, and refrigerating engineering, 188, 200-201
Highway engineering, 129, 143-144
couoperative program in, 21
Highway laboratories, 129
Historical information, 19
Holidays, 5
Honor system, 40
Honorable dismissal, 44
INDEX 231

Hour of credit, 56
Hydraulic engineering, 127, 129, 140-141
Hydraulic experimental flume, 129
Hydro-mechanical engineering, 188
Hydro-mechanical laboratory, 190

Illumination engineering, 147, 160-161
Incomplete, 43
Industrial engineering:
  definition of, 189
  five-year programs in, 156, 159, 194-196
Infantry, 82, 84

Yost Field House, 37
UNIVERSITY OF MICHIGAN OFFICIAL PUBLICATION

The University of Michigan Official Publication is the title given to the series of administrative bulletins published by the University. This series includes the following:

FOR PROSPECTIVE STUDENTS

The prospective student should have, in addition to a copy of the Bulletin of General Information, a copy of one or more of the announcements or bulletins listed under this head. These will be sent, without charge, on request to the Registrar of the University.

Bulletin of General Information

Announcements:
College of Literature, Science, and the Arts
College of Engineering
Medical School
Law School
College of Pharmacy
School of Dentistry
College of Architecture
School of Education
School of Business Administration
School of Forestry and Conservation
University Hospital School of Nursing
School of Music
Graduate School
Summer Session
Extension Division

Bulletins describing the work of various departments and curricula.

OTHER BULLETINS

The President's Report
Reports and communications of University officers

For Bulletin of General Information and Announcements address Mr. Ira M. Smith, Registrar of the University.
For general information concerning the University, address Mr. Shirley W. Smith, Vice-President and Secretary of the University, Ann Arbor, Michigan.
