The Impact of Employment Law and Practices on Business and Society: The Significance of Worker Voice

Time and time again, it has shown to be important, for both business and society, for individuals to speak up when they encounter problems or wrongdoing in the workplace. The scandal at WorldCom broke only after employees spoke up and publicly “blew the whistle” on executives.1 An Enron employee reported problems to the IRS in 1999, long before the firm’s failure in 2001 and some speculate early enough to avoid a total failure of the firm.2 In the wake of scandal, Volkswagen offered internal immunity to employees who blew the whistle regarding cheating on emissions tests and requirements.3 In an effort to weed out the wrongdoers and put the company on a path toward recovery, Siemens offered immunity for whistleblowing employees when scandal broke in connection with massive international bribery.4

Research has also demonstrated the importance of employee voice, which sometimes takes the form of whistleblowing, for individual employee well-being. When employees feel unable to exercise their voice at work, there can be serious negative impacts for psychological

and physical well-being. Despite the negative impact of employee silence for both organizations and employees, the reality is that there are often a number of serious barriers to speaking up in the workplace, including risking potential negative employment repercussions, such as termination.

The risk of termination is especially realistic in jurisdictions where employment-at-will is the legal norm. Employment-at-will gives employers and employees the right to terminate employment at any time, with or without reason, provided the reason is not illegal, without legal consequence. In the United States, employment-at-will is the applicable legal standard when there is not an employment contract, such as a collective bargaining agreement, executive contract, or other specific contract terms granting employment for a specific period of time. There are exceptions to the doctrine, but the reality is that most employment in the United States is employment-at-will.

In addition, employee protections provided by collective bargaining agreements may be on the decline. The U.S. Supreme Court recently heard the case of Friedrichs v. California Teachers Association. At issue was the mandatory payment of union dues. The Court ultimately deadlocked on the issue, thus the ruling of the lower court permitting mandatory union dues stands. Yet, some fear that the protection of unions will be a thing of the past if the Supreme Court decides in a later case that assessment of mandatory union dues is unconstitutional. Twenty-six states and the territory of Guam have already established “right-

to-work” laws declaring the compulsory joining of unions illegal and U.S. federal government employees also have a similar protection.\(^{15}\)

This paper argues that the current legal environment may negatively impact employee’s willingness to exercise their voice in the workplace. It thus becomes important for employers to adopt practices that help to provide employees a safe place to exercise voice despite the restrictive legal environment in which employees work – for the good of the firm, the employees and society. To this end, this paper connects the literature on employee voice and silence to the employment law presumptions of at-will employment, examining the negative impact these presumptions may have on employee voice. The paper then proposes that employers implement effective avenues for employee voice and internal whistleblowing, which allow employees to trust that their concerns will be heard, and that doing so will provide positive benefits to both the firm and society.

This paper is thus organized as follows. Part I discusses the importance and role of employee voice as well as some of the negative consequences associated with stifling voice. Part II discusses the legal environment of employment-at-will in the United States, which may play a large part in stifling employee voice. In Part III, the significance, benefits and perils of whistleblowing as an aspect of voice are discussed and analyzed, and recent efforts to restrict whistleblowing are critiqued. Part IV continues with proposals for positive business practices to encourage worker voice followed by our concluding remarks.

I. Significance of Voice

A. Theoretical Overview

The current research on employee voice spans across a variety of fields and topic domains; some of which are developing independently of each other.\(^{16}\) As a result, there is no consensus on the definition or operationalization of employee voice. Research that focuses on employee voice comes from a variety of sources including the literatures on: organizational behavior, industrial relations (IR), and human resource management (HRM). More specifically, employee voice is considered an important component of research on justice, proactive/prosocial work behavior, decision-making, and feedback.\(^{17}\)

Despite the variety of topics and lack of standard definition or operationalization of employee voice, three primary research streams can be said to dominate. One stream, deriving from Albert Hirschman’s work Exit, Voice, and Loyalty, views employee voice as a constructive response to dissatisfaction and alienation in the workplace.\(^{18}\) Another, a more nascent research

\(^{17}\) Id. at 1532.

stream contends that voice is not necessarily a result of dissatisfaction; rather, it is an other-oriented behavior intended to promote the effective functioning of the organization. Finally, more recent research on employee silence similarly views employee voice as a constructive behavior aimed at helping organizations solve problems but focuses on understanding some of the systemic obstacles to engaging in voice from an employee’s perspective.

1. Voice as a Response to Dissatisfaction

Although it has declined in popularity, the Exit/Voice/Loyalty/Neglect (EVLN) model—an extension of Hirschman’s “exit/voice/loyalty” model—still illuminates the analyses of employee voice in the industrial relations and human resource management fields. The model conceptualizes voice as one of four response categories to dissatisfaction or alienation: 1) exit, 2) voice, 3) loyalty, and 4) neglect. Exit and voice are both active methods of communicating dissatisfaction; voice is constructive and thus preferable to exit, which is considered destructive and inefficient. Loyalty and neglect are passive responses: loyalty reflects hope of recovery, whereas neglect accepts that recovery is not possible. In the workplace, neglect manifests in a variety of negative behaviors, such as reduced interest or effort, increased lateness or absenteeism, increased errors, or the use of company time for personal business. The belief is that the allowing employees to exercise their voice can improve the situation that is the cause of the employee alienation or dissatisfaction, and employees will subsequently become more satisfied with working conditions and less likely to quit the organization. When voice is lacking, but employees do not have the option to quit, they tend to withdraw and slip into neglect.

Proponents of this model tend to operationalize voice in terms of the presence or absence of formal and informal voice mechanisms. Although the most commonly studied manifestation

26 See generally FREEMAN & MEDOFF, supra note 23 (theorizing that unionized individuals will be less likely to quit because grievance procedures provide a voice mechanism). Empirical studies have provided some support for this theory. See Roderick D. Iverson & Douglas B. Curran, Union Participation, Job Satisfaction, and Employee Turnover: An Event History Analysis of the Exit-Voice Hypothesis, 42 INDUS. REL. 101 (finding a negative relationship between union presence and employee intentions to quit); Derek R. Avery et al., Does Voice Go Flat? How Tenure Diminishes the Impact of Voice, 50 HUM. of voice mechanisms in this literature is union representation,\textsuperscript{27} other examples of voice mechanisms include grievance filing, whistleblowing, informal complaints, and participation in suggestion systems.\textsuperscript{28}

2. Voice Mechanisms as an Opportunity to create Perceived Justice

In the organizational justice context, employee voice is viewed as a desirable structural feature of organizational procedures and policies that provides employees with a perceived opportunity to express their views to decision-makers.\textsuperscript{29} Research on “process control,” or the voice effect, has been particularly influential in the study of employee voice.\textsuperscript{30} Process control was first observed by Thibault and Walker in their studies of dispute resolution in legal settings; they found that perceived control over the procedures that led to decisions made the procedures seem more fair, regardless of actual outcome.\textsuperscript{31} Other studies have also found a positive relationship between process control and the perceived fairness of outcomes.\textsuperscript{32}

Perhaps one of the most well-known models of procedural justice is the “group value” model; which suggests that people value their membership in groups because groups “offer symbols of identity, economic resources, and a way of validating behavior.”\textsuperscript{33} Fair procedures make members of the group feel valued.\textsuperscript{34} Employee voice opportunities are thus positively linked with outcomes because they reduce uncertainty, increase individuals’ felt control over the processes that lead to outcomes, and make individuals feel like valued members of the organization.\textsuperscript{35}

3. The Pro-social Conceptualization of Employee Voice

The proactive work behavior literature conceptualizes voice as a behavior, rather than in terms of the presence of voice-granting mechanisms or perceived voice opportunities.\textsuperscript{36} Central to this research stream is the idea that the underlying motivation for employee voice is pro-social

in nature. That is, employee “[v]oice is motivated by the desire to bring about constructive change for the organization or for one or more stakeholders.” An employee is therefore more likely to engage in voice behaviors to the extent that she has a strong desire or sense of obligation to help the organization operate more effectively or appropriately via its employees, clients, or the external community. Empirical studies have provided support for this idea by showing a relationship between employee voice and a variety of internal motivational states reflecting a sense of commitment to the well-being of one’s organization, coworkers, or customers. These include felt responsibility for constructive change, sense of obligation, work-group or organizational identification, conscientiousness, and customer orientation.

Many scholars in this area also conceive of voice as a type of organizational citizenship behavior. But unlike some other organizational citizenship behaviors, voice is often seen as challenging, especially to managers, rather than affiliatory; especially when it is aimed at disrupting the status quo. Furthermore, voice can only have positive effects when it reaches a target with the power to take action; this is in contrast to other organizational citizenship behaviors which generally do not require approval or action from above to have positive effects. Thus, engaging in voice involves an element of personal risk for an employee, who may jeopardize her relationships with colleagues and supervisors by engaging in voice.

B. The Impact of Voice

Employee voice opportunities and voice behaviors have been linked to numerous positive psychological, relational, and health-related outcomes. For the individual employee, the positive outcomes associated with perceiving that one has opportunities to “voice” one’s concerns in the workplace include: improved justice perceptions, better job attitudes, increased satisfaction at work, improved positive relationships with supervisors, and improved performance ratings. Positive outcomes such as team learning, improved work processes and innovation, and even

crisis prevention have been observed at the unit and organizational levels. Further, the suppression of voice behaviors and the perceived lack of voice opportunities can create feelings of stress, loss of control and loss of self-efficacy.

Paradoxically, no significant correlation has been found between voice behaviors and objective performance (including both financial performance and productivity rates) although some empirical studies suggest that when voice is heard but ignored, employee output substantially decreases. One reason why there may be no observed positive relationship between voice behavior and objective performance measures is that the relationship is likely to be complex. That is, the relationship between voice behaviors and outcomes such as financial performance is likely to be both mediated and moderated by a number of factors including the nature of the voice both in terms of content and delivery, the degree of management openness to the voice efforts, the reactions to the voicing attempt, whether the problem is solved, and the felt outcomes of voice for the employee. Also mediating the relationship between voice and performance outcomes are more proximal outcomes of voice such as its effects on employee well-being, employee commitment, and the degree of trust across levels of the hierarchy.

1. Psychological Well-being

Voice, whether characterized as a behavior or in terms of the availability of voice mechanisms, has been positively associated with numerous facets of psychological well-being, such as job satisfaction, outcome satisfaction, and organizational commitment. Furthermore, employee satisfaction has been shown to increase when a greater number of voice mechanisms are available.

50 See Colquitt et al., *supra* note 32, at 436 (finding a positive relationship between voice opportunities and outcome satisfaction, job satisfaction, and organizational commitment); Jeffrey P. Thomas et al., *Employee Proactivity in Organizations: A Comparative Meta-Analysis of Emergent Proactive Constructs*, 83 J. OCCUPATIONAL & ORGANIZATIONAL PSYCHOL. 275 (2010) (finding a positive relationship between informal voice behaviors and job satisfaction and affective organizational commitment); Ng & Feldman, *supra* note 36, at 221 (finding a negative relationship between informal voice behaviors and affective detachment from the organization and organizational disidentification).
51 But see, e.g., Bashshur & Oc, *supra* note 16, at 1536 (noting that many studies report a negative relationship between union representation and dissatisfaction).
Many of the positive individual-level attitudinal and behavioral effects of voice can be linked to an individual’s perception of personal control. In the organizational justice literature, the availability of opportunities to provide input has been closely linked with an employee’s sense of personal control in the workplace.\(^{52}\) In this context, personal control is defined as an employee’s subjective belief in her “ability to effect a change, in a desired direction, on the environment.”\(^{53}\) Given the amount of time people spend at work,\(^{54}\) it is unsurprising that employees wish to see themselves as active members of the organization, rather than passive cogs in the machine.\(^{55}\) Some scholars go so far as to suggest that employees have “an innate need or desire for control over their work environment.”\(^{56}\) By voluntarily engaging in change-oriented behaviors, employees are able to assert their sense of personal control.\(^{57}\) In contrast, lack of personal control is associated with an assortment of detrimental individual outcomes, such as dissatisfaction, stress, decreased performance, withdrawal symptoms, destructive tendencies, and even sabotage.\(^{58}\)

Organizational justice scholars have also found a positive relationship between voice opportunities and perceived fairness; employees who perceive that they have input into procedures and outcomes are likely to view such procedures and outcomes as more fair. Perceptions of procedural fairness influence organizational identification, commitment, and trust, in addition to job satisfaction, organizational citizenship behavior, and turnover intentions. If employees have more opportunities to provide work-related input, they have a greater sense of control, which increases the expectancy of effectively resolving workplace problems and issues through personal action.\(^{59}\) They may also feel more like valued members of the organization if they perceive that they are treated fairly at the workplace.\(^{60}\) It is important, however, that voice opportunities be legitimate; when employee voices are heard but ignored, dissatisfaction increases,\(^{61}\) and productivity decreases.\(^{62}\)

---

\(^{52}\) In organizational justice literature, “process control” is near-synonymous with the ability to provide input in the procedures that lead to outcomes. See, e.g., Colquitt et al., supra note 32, at 428.

\(^{55}\) Richard Decharms, *Personal Causation: The Internal Affective Determinants of Behavior* 274 (1968); Greenberger & Strasser, supra note 53.

\(^{60}\) Lind & Tyler, supra note 34.

Employees who consciously suppress their work-related thoughts, opinions and suggestions because they believe that will not be valued may experience cognitive dissonance; they believe that they have something important to express, but by remaining silent their behavior is at odds with that belief. Employees experiencing cognitive dissonance are predicted to be in a state of emotional tension, which increases stress and exacerbates stress-related outcomes. To resolve this dissonance, either their lack of voice or beliefs must change, but as mentioned, the perceived risks associated with voicing their concerns create a significant barrier to engaging in voice behaviors. As a result, an employee is more likely to resolve dissonance by reducing their belief about the importance of the issue she wishes to speak about, disassociating from the organization, or viewing herself as being a person who holds little influence, leading to “neglect” in the words of the EVLN model.

2. Relationships

Employee voice does not occur in a vacuum. It is therefore unsurprising that research has linked voice to “relational” outcomes such as trust, liking, leader support, manager-subordinate relationships, and loyalty. Within the organizational justice literature, fairness heuristic theory posits that individuals use perceived fairness (procedural or otherwise) as a proxy for interpersonal trust, particularly when deciding whether to cooperate in group contexts. This theory assumes that people place a particularly high premium on trust of authority figures, because “ceding authority to another person provides an opportunity for exploitation and exclusion. . . .” Perceptions of greater fairness in authority-enacted procedures lead people to be more trusting of that authority, which in turn satisfies their social and psychological needs for esteem, identity, and affiliation. This theory is backed by meta-analytic studies indicating a significant positive relationship between perceived voice opportunities and employees’ trust in authority.

---

62 A field experiment placed 80 employees into voting majority and minority subgroups. In the absence of post-decisional voice, members of the minority subgroup perceived the decision as less fair and produced 41% less output than members of the voting majority subgroup. 70 E.g. Colquitt et al., supra note 32, at 436 (finding a positive relationship between process control and feelings of trust).
Constructive voice behaviors signal employee commitment and concern for the organization. According to social exchange theory, managers should recognize and reward employees who express voice. However, studies tying voice behaviors to relational outcomes have produced less uniformly positive results. In reality, individuals may not be so receptive to input – particularly criticism from someone lower in the organizational hierarchy. Recent studies suggest that the impact of voice depends on the content of the message and how it is communicated. For example, Steven Whiting and colleagues found that employers perceive voice more positively when it provides a solution, it is given early in the process, it comes from a person who is viewed as trustworthy and an expert in the relevant area, and there is a norm for speaking up in the organization. Employees who are able to effectively regulate their emotions while engaging in voice also receive better performance evaluations. In contrast, a 2001 study found a negative relationship between proactive voice and career progression; the authors argued that employees whose proactive voice focuses on problems without providing innovative solutions may damage their workplace relations and, in turn, their own careers.

Thus, providing employees with perceived voice opportunities has been hypothesized and often found to have positive consequences for employees in terms of their perceptions of control and fairness and resulting sense of commitment to the organization. However, managers are often less positive in their judgment of employees who exercise the opportunity to speak up about sources of dissatisfaction or even, suggestions for improvement.

3. Health

Although the impact of voice on health-related outcomes has not been rigorously tested, related studies on stress suggest that stifling voice may also have serious psychological and physical health effects. In 1979, Robert Karasek first observed that personal control (as measured by latitude in decision-making) moderates the relationship between work and stress. Feelings of work-related unfairness, work-related dissatisfaction, lack of trust in the organization, and the suppression of work-related emotions have all been described as examples of occupational stressors and strains.

Research provides abundant evidence that high levels of workplace stress are likely to lead to health problems, increased likelihood of accidents, and burnout. Further, workplace stress has been shown to lower productivity, increase absenteeism, and create pervasive patterns of dysfunction in the workplace. Stress-induced medical conditions include bodily pains, dizziness, headaches, heart disease, asthma, and hypertension. Chronic stress may weaken an individual’s immune system and induce a state in which the body no longer has the capacity to adapt to stress, leading to high blood pressure, heart attacks, chronic fatigue, psychosis, and symptoms of depression. Studies of workplace-related stress have shown that employees experiencing chronic stress may develop physical symptoms such as unstable blood pressure, muscle tension, and headaches; and psychological symptoms such as the decreased ability to concentrate and retain information, substance abuse, and clinical depression. Stress may also exacerbate existing medical conditions, particularly in the case of chronic stress. Once ill, stress also makes recovery from illness more difficult. The adverse health effects of workplace stress are reflected in increasingly high individual and organizational health-care costs. A 2016 study focusing on workplace stressors found that 120,000 deaths per year and 5% - 8% of annual healthcare costs may be attributable to how U.S. companies manage their employees.

C. Voice and Silence

Voice is conceptualized differently across literatures. Early work on employee voice characterized it as a constructive response to work-related dissatisfaction; employees who are unhappy with their job may voice their concerns, exit the organization, or remain in the hope that work conditions will change. More recently, scholars have tended to describe voice as a

behavior that is informal, extra-role, and prosocial. Voice has been defined as “the informal and discretionary communication by an employee of ideas, suggestions, concerns, or information about problems . . . to persons who might be able to take appropriate action, with the intent to bring about improvement or change.” For our purposes, voice may be expressed informally, or via mechanisms such as grievance procedures or union membership. Silence, on the other hand, refers to the withholding of information from persons perceived to be able to take appropriate action. It is important to note that silence is not merely the absence of voice, as “not speaking up can occur for many reasons, including having nothing meaningful to convey.” Similarly, the presence of voice behaviors does not imply the absence of intentional silence.

Although scholars have taken different approaches to operationalizing and explaining employee voice, most agree on two matters: first, employee voice is beneficial; second, employees who are presented with a “latent voice opportunity” – that is, employees who possess potentially relevant or important work-related knowledge, opinions, concerns, or ideas – often choose to remain silent. Next, we analyze the inhibitors of employee voice and motivators of employee silence.

1. Barriers to Voice

In a recent study, 461 individuals were asked to describe occasions when they had intentionally stayed silent in response to an important work-related issue and their motives for doing so. The most frequently expressed motivations for silence were that they “did not think it would do any good to speak up,” wished to avoid conflict, and feared negative consequences. These motivations echo findings from previous employee interviews and surveys regarding employee voice, which appear to corroborate two principles: first, many employees are hesitant to speak up about work-related issues; and second, the two primary

perceptions that inhibit voice are the fear of negative consequences at the workplace and doubts about the utility of engaging in voice.\textsuperscript{101} Of course, whether an employee does engage in voice will likely be influenced by a wide variety of factors, including individual dispositional idiosyncrasies such as self-esteem, extraversion, and neuroticism.\textsuperscript{102} However, two key influencers of the “voice choice,” perceived risk and utility, are common across individuals.

\textbf{a. Risk}

Engaging in change-oriented voice is risky because it inherently involves a challenge to the status quo. An employee may fear that by speaking up in a way that challenges work practices and decisions or that highlights a serious problem, she will be viewed as a troublemaker or complainer, lose respect or support from others at work, and face negative job consequences (such as getting passed over for promotions or being fired).\textsuperscript{103} In the corporate hierarchical setting, leaders and supervisors and the relationships they have with employees, play particularly significant roles in the risk assessment.\textsuperscript{104} This may be explained in part by the power imbalances inherent in hierarchical structures. Because higher-ups have power over subordinates’ pay, promotions, work assignments, and continued employment – employees will be particularly wary of jeopardizing relationships with them.\textsuperscript{105}

\textsuperscript{101} For a concise summary of surveys regarding employee reluctance to engage in voice and their rationale for not doing so, see Employee Voice and Silence, supra note 20, at 178. In particular, a 1991 study found that over 70% of employees surveyed felt afraid to speak up about certain issues. \textit{Id.}

\textsuperscript{102} Empirical studies in the prosocial behavior literature have identified a wide variety of dispositional and attitudinal factors as antecedents to, or moderating variables affecting, employee voice. \textit{See, e.g.}, Joel Brockner et al., \textit{The Moderating Effect of Self-Esteem in Reaction to Voice: Converging Evidence From Five studies}, 75 J. PERS. SOC. PSYCHOL. 394 (1998) (self-esteem); Fuller et al., \textit{supra} note 59 (felt obligation for constructive change); Jian Liang et al., \textit{supra} note 46, at 71 (psychological safety, felt obligation for constructive change, and organization-based self-esteem); J. Michael Crant et al., \textit{Dispositional Antecedents of Demonstration and Usefulness of Voice Behavior}, 26 J. BUS. PSYCHOL. 285 (2010) (the dimensions of personality in the Five-Factor model – openness, conscientiousness, extraversion, agreeableness, and neuroticism); Subrahmaniam Tangirala et al., \textit{Doing Right Versus Getting Ahead: The Effects of Duty and Achievement Orientations on Employees’ Voice}, 98 J. APPL. PSYCHOL. 1040 (2013) (duty and achievement orientation). Note that these studies focused primarily on these individual factors as antecedents of voice, but in most studies voice could just as easily be the predictor. Individual traits have also been linked to usage of voice mechanisms. \textit{See, e.g.}, Michael Frese et al., \textit{Helping to Improve Suggestion Systems: Predictors of Making Suggestions in Companies}, 20 J. ORGANIZATIONAL BEHAV. 1139 (1999) (self-efficacy and work initiative predictors of suggestion system usage).

\textsuperscript{103} \textit{See Employee Voice and Silence, supra} note 20, at 179.

\textsuperscript{104} \textit{See, e.g.}, Karen Harlos, \textit{If You Build a Remedial Voice Mechanism, Will They Come? Determinants of Voicing Interpersonal Misdirection at Work}, 63 HUMAN REL. 311 (2010) (finding that relative hierarchical power is one of the key determinants in deciding whether or not to use formal voice mechanisms).

Even if leaders display openness to input and willingness to address concerns, employees may hold implicit, automatically-applied beliefs about the riskiness of speaking up within a hierarchy. For example, employees may subconsciously “intuit” that one should not embarrass one’s boss in public and that challenging the status quo can have a negative impact on one’s career. These intuitions likely originate from evolutionary instincts (i.e., not offending “higher-status” individuals improves chances of survival) and socialization; i.e., many individuals may be innately predisposed to avoid behaviors that could be perceived as challenging authority. As a result, employees may be inclined to suppress voice even if supervisors are objectively approachable and open to input.

The perceived riskiness of speaking up is heightened when voice is critical; for example, when the thoughts or opinions at issue are critical of “existing or impending practices, incidents, or behaviors that may harm the organization . . .” or when they relate to perceived mistreatment. Critical voice is riskier because “pointing out dysfunction more directly implicates the failure of important stakeholders in the workplace.” Ambitious individuals may be particularly disinclined to engage in voice out of the concern that doing so would jeopardize their career. This is troubling because critical voice serves important diagnostic and preventative functions for organizational health by drawing attention to previously undetected problems and flaws in organizational initiatives. Liang and colleagues suggest that in certain settings, critical voice may be even more impactful than positive, “promotive” voice because developing and implementing new initiatives is costly and time-consuming, particularly for fast-paced organizations, whereas “prohibitive” voice may more efficiently place a stopper on losses.

Because of the risks involved in speaking up at work, employees are unlikely to engage in voice if they perceive that doing so will be ineffective. As with the safety calculus, the role of hierarchy within organizations influences the perceived efficacy of voice. When group- or organization-level beliefs emphasize the value of voice, individual use of voice is greater. An individual who perceives making constructive suggestions to be part of her prescribed work role is also more likely to engage in voice. On the other hand, employees are more likely to remain silent when there exists a shared group-level perception that speaking up is futile. Group-level attitudes toward voice also impact the use of voice mechanisms such as suggestion systems. Employees are less willing to use suggestion systems when managers are indifferent and inefficient, and more willing to do so when the organization possesses a “learning culture.” Research examining the use of formal grievance process to address perceived mistreatment has shown that employees are influenced by factors likely to affect the relative attractiveness of this form of voice over other possible responses, such as the availability of labor market alternatives, and factors that are likely to increase the cost of alternative responses.

c. Managerial Attitudes

Employees’ fears and skepticism regarding higher-ups’ receptiveness to subordinate input are not without basis. A recent series of studies focused on how managers respond to both

the act of engaging in voice and the content of the message.\textsuperscript{125} The results suggest that when voice is seen as challenging the status quo rather than supporting it, managers are more likely to regard the employee as disloyal and threatening, and as a result, they are less likely to endorse the message; further, they are more likely to rate employees who engage in “prohibitive” voice as poor performers.\textsuperscript{126} Morrison and Milliken assert that managers’ implicitly held beliefs and attitudes play a large part in shaping organizational “climates of silence.”\textsuperscript{127} People (managers in this case) often feel threatened by negative feedback and try to avoid receiving or absorbing it by employing defensive mechanisms, such as questioning the credibility of the source or dismissing the criticism as inaccurate.\textsuperscript{128} This holds even more true for managers, who may feel a strong need to avoid embarrassment, threat, and feelings of vulnerability, even if they genuinely wish to be receptive to input.\textsuperscript{129} Negative feedback from subordinates is particularly unwelcome, and is seen as less legitimate and more threatening compared to feedback from above.\textsuperscript{130} Recent studies indicate that managers may perceive employees who constantly express challenging voice as offensive, hostile, or disloyal.\textsuperscript{131}

Moreover, managers are likely to hold a number of implicit beliefs about their subordinates and themselves that make them even more inclined to discredit change-oriented input from employees.\textsuperscript{132} First, managers often assume that employees are: 1) motivated by self-interest; and 2) effort-averse, and, therefore, cannot be trusted to act in the organization’s best interests without some form of incentive or sanction.\textsuperscript{133} Second, managers may believe “management knows best,” and that “hired hands should put up or shut up.”\textsuperscript{134} Third, managers often think that consensus is healthy and dissent is unhealthy.\textsuperscript{135} The hierarchical structure of corporate organizations undergirds these beliefs; the further people progress upward within an organization, the less likely they are to identify with those below them.\textsuperscript{136} This decreased ability to identify with subordinates as one climbs the organizational hierarchy might make it easier to make generalizations about employees, and further, the "management knows best" belief may be

solidified by the need to justify one's progression. It may be natural to assume that one must know best given one's superior position in the organizational hierarchy.

As a result, if employees express concern about a proposed organizational change, management may be apt to assume that the employees are resisting the change because it is personally threatening to them or because they do not understand it, not because the employees are truly concerned that the change might be harmful to the organization.\(^{137}\) Voice that was intended to benefit the organization may easily be misinterpreted as “unacceptably challenging authority, rocking the boat, merely complaining and wasting time . . . or showing off and not being a team player.”\(^{138}\)

Next, this manuscript identifies ways in which the legal environment may also stifle voice. To this end, Part II discusses typical employment relationships in the United States followed in Part III with an analysis of whistleblowing laws.

II. The Legal Environment: Employment-at-Will

In every U.S. state, private employment is presumed to be “at will.”\(^{139}\) Generally, unless an employment contract specifies otherwise, an employee can be fired without cause. Likewise, an employee can leave a job for any reason without being subject to liability.\(^{140}\) The lack of job security created by the employment-at-will standard may serve as a systemic barrier to exercising voice in and out of the workplace.

A. Historical Underpinnings of the Employment-at-Will Doctrine

The English common law rule, and American practice in the nineteenth century, largely converged by enforcing employment contracts of a fixed duration, and disallowing premature termination without cause.\(^{141}\) The main point of departure between the United States and English rules was the treatment of employment contracts of indefinite length.

This English rule, construing a hiring of an indefinite length to be for a year,\(^{142}\) was thought to protect servants (and the communities, who under English poor laws, were

responsible for maintaining their poor) from being discharged during the lulls of the planting and harvesting season while also protecting masters from servants leaving during the busy periods.\(^{143}\)

Under the traditional view of the history of at-will employment in the United States, the states followed the substance of the English rule\(^{144}\) before a seismic shift in the late nineteenth century following the publication of the influential legal treatise, Horace G. Wood’s *Master and Servant*. After this shift, employment without a set duration was prima-facie terminable at the will of either party.\(^{145}\)

While some scholars doubt the importance of Wood’s treatise,\(^{146}\) the United States Supreme Court emphatically adopted the at-will rule in 1908. In *Adair v. United States*,\(^{147}\) the Court reviewed the constitutionality of Section 10 of the Act of Congress of June 1, 1898. Section 10, which protected an employee’s ability to join unions,\(^{148}\) was struck down on the grounds that it interfered with an employer’s personal liberty and right of property under the Fifth Amendment.\(^{149}\) Seven years later, the Supreme Court struck down a similar state statute under the 14th Amendment, explaining that the statute interferes with the right to contract, a protected property right.\(^{150}\)

Other scholars doubt the influence of Wood’s treatise in precipitating the adoption of the employment-at-will doctrine. Furthermore, historians have evidence that a number of states were not applying the English annual hiring rule long before Wood’s treatise. As early as 1853, Georgia was not applying the English rule. Henderson v. Stiles, 14 Ga. 135 (1853) (commenting that where an employment contract has no specified time, an employee may recover unpaid labor wages on a theory of quantum meruit; the annual hiring presumption of the English rule is not mentioned). New York*, 198 U.S. 45 (1905) (holding that a statute establishing maximum hours for bakers was unconstitutional under the “general right to make contract in relation to [one’s] business [which is] part of the liberty of the individual protected by the Fourteenth Amendment.”). The influence of laissez-faire economics evident in the *Lochner*-era, is often put forth as a reason for the abandonment of the English rule. *See Jacoby, supra* note 141, at 92-93. Additionally, the rise of the at-will rule coincides well with industrialization, so some legal historians posit a causal relationship. These historians reason that the more familial master-servant relationship increasingly became replaced by impersonal, commercial employment relationships, where employers no longer were expected to take on the responsibility of ensuring their employee’s job security. *See e.g.*, Feinman, *supra* note 7, at 123. There are challengers to this belief though. *See e.g.*, Morriss, *supra* note 146, at 703 (finding that the rule spread from the West and South to East and did not cover a majority of the population until the mid-1890’s, well after many of the
Beginning in the mid-1930’s, the original version of the at-will rule met its demise. Exceptions to the doctrine began to rise precipitated by the passage and subsequent judicial interpretation of the National Labor Relations Act, which gave employees the right to self-organize and join labor unions. Today, the high courts of 49 states and the District of Columbia recognize some modern variant of the at-will employment rule.

B. Application of Employment-at-Will Today

Despite “at-will” having the connotation of “for any reason,” modern American law acknowledges that even at-will employees cannot be fired for literally any reason. The at-will presumption is just that, a presumption. Laws and contracts may alter the presumption and legal rules may limit its application. Two broad categories of exceptions to the at-will doctrine exist: those based on statutes and those based on common law. These categories are discussed next.

1. Statutory Exceptions to Employment-at-Will

Numerous federal statutes limit an employer’s ability to freely discharge an employee. Some of these statutes relate to the exercise of employee rights; for example, an employer cannot discharge or take other adverse actions based on an employee’s exercise of protected concerted activities, refusal to take part in activities that are reasonably believed to be in violation of any law, exercise of rights related to wage-and-hour standards, exercise of rights secured by the Employee Retirement Income Security Act, or request for leave under the Family and Medical Leave Act. Other statutes deal with discharge related to certain characteristics of an individual employee. Employers are prohibited from discharging an employee on the basis of race, sex, color, religion, national origin, age, pregnancy, or disabilities. Federal statutes also

significant labor struggles stemming from capital and labor had taken place); id. at 682, 697, 745 (finding that the rise of the at-will rule is best correlated with the rise of elected judges; thus, the scholar hypothesized that the reason behind adoption of the rule must lie with the court as an institution, perhaps judicial desire for a simple rule or to keep decisions from going to a jury). See also Feinman, supra note 7, at 131-34 (claiming the rule was promoted by the “capitalists,” who were combatting legal challenges by an emerging professional class and wanted to shift the risk of economic downturns to employees by being able to discharge them during downturns).

151 N.L.R.B. v. Jones & Laughlin Steel Corp., 301 U.S. 1 (1937) (holding that an employer cannot use the right to discharge employees to “intimidate or coerce its employees with respect to their self-organization and representation. . . .”).

protect employees that report, or assist in investigations of, employers’ violations of federal acts such as the Sarbanes-Oxley Act, wage violations, health and safety violations, or violations under the Clean Air Act and Water Pollution Control Act. States also have their own statutes that limit at-will employment.

Finally, a number of states have enacted statutes protecting employees from discharge based on lawful activity outside of the workplace. For example, Connecticut protects employees who exercise certain federal and state constitutional rights provided the “activity does not substantially or materially interfere with the employee's bona fide job performance or the working relationship between the employee and the employer.” New York goes beyond this and protects employees who engage in legal “recreational activities,” including legal use of consumable products, provided the activities are outside work hours, off of the employer's property, and do not involve the employer's equipment or property. Most state statutes protecting employees for lawful activity outside of work contain exceptions for activity related to work or to the employer’s business interests.

2. Common Law Exceptions to Employment-at-Will

Much more complicated than the statutory exceptions to the at-will presumption are the common law exceptions. These judicially-created exceptions can be generally classified into

three categories; those based on: (a) implied contract, (b) the covenant of good faith and (c) public policy.

a. Implied in Contract Exception

The implied-in-contract exception establishes a breach of contract where an employer fires an employee when the circumstances surrounding the employment relationship dictate that the employee was not terminable at-will. This exception is commonly applied in cases involving written employer policies, such as employment manuals which can contain provisions that limit the employer’s power to discharge an employee.172

Even without express provisions, certain provisions can amount to an implied contract that limits the at-will doctrine.173 For example, in *Toussaint v. Blue Cross & Blue Shield of Michigan*,174 the Michigan Supreme Court ruled that the employer’s employee manual and guidelines, which specified that employees would only be terminated for just-cause, created an implied contract overcoming the at-will presumption.175 Some states have gone as far as to imply that an employer’s creation of an atmosphere of job security is sufficient to overcome the at-will employment presumption.176 Furthermore, oral assurances of job security may also be sufficient to overcome the presumption of employment-at-will.177 Only thirteen states do not

App. 2005) (where the court found that employees terminated without cause are entitled to damages where their employment manual stated that “the tenure of an employee with permanent status shall continue during good behavior and satisfactory performance.”); Aberle v. City of Aberdeen, 718 N.W.2d 615, 621 (S.D. 2006) (where the court stated that a policy or handbook providing exclusive grounds for employee discipline or discharge amounts to an implied contract binding the employer to a for-cause termination procedure when the language is not merely precatory or explicitly disclaims any deviation from at-will employment); Pine River State Bank v. Mettilee, 333 N.W.2d 622 (Minn. 1983) (where the general language regarding high job security of the “Job Security” section of an employee handbook was ruled “no more than a general statement of policy” but the “Disciplinary Policy” was an offer creating an implied contract overcoming the at-will presumption because it “set out indefinite language an offer of a unilateral contract for procedures to be followed in job termination).
174 408 Mich. 579 (1980) (stating that an employee’s reliance on a provision in the employee manual stating that discharge would be for just cause only established an implied contract rebutting the at-will presumption).
175 Id. at 614.
176 See, e.g., Bulman v. Safeway, Inc., 27 P.3d 1172, 1175 (Wash. 2001) (“[I]f an employer, for whatever reason, creates an atmosphere of job security and fair treatment with promises of specific treatment in specific situations and an employee is induced thereby to remain on the job and not actively seek other employment, those promises are enforceable components of the employment relationship.” (citing Thompson v. St. Regis Paper Co., 102 Wn.2d 219, 233 (Wash. 1984))).
recognize the implied-contract exception. Employers today often carefully word their handbooks and other materials given to employees and typically include disclaimers, thus largely avoiding claims of this kind.

b. Implied Covenant of Good-Faith and Fair-Dealing

Under the good-faith and fair-dealing exception, a court will read the implied covenant of good-faith and fair-dealing into every employment relationship. This exception has been interpreted to mean either: (1) that terminations motivated by malice or made in bad faith are prohibited, or (2) that employer personnel decisions are subject to a just-cause standard.

California courts were among the first to recognize the good-faith exception. In Cleary v. American Airlines, Inc., the California appellate court acknowledged a terminated employee’s eighteen years of service for the employer airline company in holding that the employee could only be fired for good cause. The court stated that the employee’s termination after such a long period of employment offended the implied covenant of good faith and fair dealing. Interestingly, the court noted the importance of reading in the implied duty in order to “ensure social stability in our society.” Delaware courts applied the covenant of good-faith and fair-dealing in an at-will employment situation with regard to an employer’s “bad faith or unfair dealing achieved by deceit or misrepresentation . . . to create fictitious grounds to terminate employment.” The covenant was first recognized in Idaho where an employer dropped an employee to part-time for using above-average sick-leave days although the employee had not used all her accrued sick leave.

United Airlines, Inc., 32 Wn. App. 722 (1982) (stating that an employee’s subjective understanding or expectations alone are not sufficient grounds to create an implied contract that overcomes the at-will presumption).

Id. at 443-44 (Del. 1996) (holding that if a jury believed that an employer mounted a false campaign to discredit an at-will employee who criticized him, such campaign resulting in the employee being fired, the termination would amount to being in bad faith).

Metcalf v. Intermountain Gas Co., 778 P.2d 744, 750 (Idaho 1989) (“[A]ny action by either party which violates, nullifies or significantly impairs any benefit of the employment contract is a violation of the implied-in-law covenant of good faith and fair dealing which we adopt today.”).
The vast majority of states reject the good-faith and fair-dealing exception to at-will employment. According to a Florida court in *Catania v. Eastern Airlines, Inc.*, inquiring into an employer’s motivation behind the termination of an employee is too great of a task for the court to undertake. Several other courts have elaborated that acknowledging a good-faith exception to the at-will presumption would essentially transform the presumption to one of for-cause. The only states to recognize the good-faith exception are Alabama, Alaska, Arizona, California, Delaware, Idaho, Massachusetts, Montana, Nevada, Utah and Wyoming.

**c. The Public Policy Exception**

Based on common law tort theories, the public policy exception is the most prevalent exception to the employment-at-will doctrine. This exception protects employees from termination that would be contrary to federal or state public policy.

---

190 *Id.* at 267.
191 *See, e.g.*, Daniel v. Magma Copper Co., 127 Ariz. 320, 324 (Ct. App. 1980) (recognizing that reading in a good-faith exception would transform an at-will contract “into a hybrid contract under which the employee cannot be discharged unless his work is unsatisfactory or his services are no longer needed.”).
192 Hoffman-La Roche, Inc. v. Campbell, 512 So.2d 725 (Ala. 1987).
Many states expand this doctrine beyond wrongful discharge to also cover wrongful demotion or other significant job-related detriment in contravention of public policy. For example, the U.S. District Court for the District of Connecticut found that a teacher, who was also the teacher’s union president, was protected from an unpaid suspension following the teacher being “quoted in a newspaper article criticizing the school district’s reimbursement of administrators’ advanced degrees.” The public policy exception has yet to be extended to a wrongful refusal to hire.

Some state courts, including Alabama, Georgia, and New York, heavily disfavor or decline to create public policy exceptions to the at-will doctrine and rather leave the creation of such exceptions to the state legislatures. Other jurisdictions recognize a judicially created public policy exception but limit it. Yet other state judiciaries apply the public policy exception comparatively broadly. Utah’s Supreme Court applied this exception to at-will employees of Wal-Mart who were discharged for exercising their right to self-defense when a confrontation with shoplifters became physical despite Wal-Mart’s policy requiring employees to withdraw from potentially violent situations. The supreme court of New Jersey similarly allowed a wrongful discharge claim against public policy when an employee, who was also a municipal council member, voted for an ordinance that was against the employer’s interest and was subsequently discharged.

Times, 790 N.E.2d 753, 759 (N.Y. 2003) (We have consistently declined to create a common-law tort of wrongful or abusive discharge . . . grounded in a conception of public policy into employment contracts . . . .”); Reilly v. Alcan Aluminum Corp., 528 S.E.2d 238, 239-40 (Ga. 2000) (“Although there can be public policy exceptions to the doctrine, judicially created exceptions are not favored, and Georgia courts thus generally defer to the legislature to create them.”); Howard v. Wolff Broad. Corp., 611 So. 2d 307, 312 (Ala. 1992) (affirming that the court, thus far, declines to recognize public policy exceptions to at-will employment, and leaves the creation of such exceptions to the legislature).

209 See, e.g., Winters V. Houston Chronicle Pub. Co., 781 S.W.2D 408, 408 (Tex. App. 1989) (where the “narrow” public policy exception was held not to apply to an employee reporting illegal act but only to employee’s who refuse to perform an illegal act).

The exceptions to the employment at will doctrine provide important opportunities for employees to be able to find their voice in organizations. In many ways though, the common law exceptions have been supplanted by a new crop of legislative attempts to encourage whistleblowing. The next part, Part III, discusses the need to provide voice for whistleblowers, the legislative initiatives to accomplish this, and recent efforts by others to stifle the voice of whistleblowers.

III. Whistleblowing

A. Efforts to Promote Whistleblowing

The widespread adoption of whistleblowing legislation and popular acceptance of the idea today is a result of a long history of legislators’ desires to get employees to speak up to help stop fraud and wrongdoing within organizations and government, to facilitate law enforcement, and to protect public health and safety.212 The first legislative enactments coincided with the beginning of the court-created exceptions to employment at will discussed above.213 These statutes, passed after some calamity, banned retaliation. The presumption was that people within the organization who knew about problems were afraid of the consequences of coming forward; if employees were statutorily protected against retaliation, they would be more willing to speak out.214 However, whistleblowers did not initially rely on the statutes because they provided no meaningful remedies. Thus, those who had lost jobs or suffered other detriment opted to sue under the common law theories, especially wrongful firing in violation of public policy, which allowed for punitive damages.215 Further, the initial presumption may be wrong; social science studies report that factors other than fear of retaliation are important in deciding whether to report.216 Some of these factors include the perceived need for strong evidence, the seriousness of the wrongdoing, the perceived likelihood that managers would listen and that the problem would be corrected, having clear reporting channels, and an organizational atmosphere of openness that encourages voice.217

Statutory protection for whistleblowers rapidly grew in the late 1980s and 1990s, especially after legislators saw the efficacy of giving large rewards for information that could help governments recover wrongfully-claimed funds, conserve law enforcement resources, and

A key occurrence spurring the widespread adoption of whistleblowing legislation was the revision of the False Claims Act (FCA) in 1986. The revised FCA allows a whistleblower to bring suit in the name of the government to recover wrongfully-claimed federal funds even if the government itself does not bring suit. If the information provided is new (unknown to the government) and leads to a recovery, the whistleblower can receive up to 30% of what is collected by the government. Since such fraud usually involves large sums, many successful whistleblowers become millionaires. Whistleblowing suits under the FCA went from an average of six per year pre-amendments, to over 450 in 1998, and thousands now. Indeed, a recent five-week period was declared to be a record period for FCA whistleblower recoveries, resulting in about $500 million recovered by the government. In fraud involving Medicare alone, the government has recovered $5.5 billion from 2007 to 2016. While the increase in reward size clearly was important in generating reports, in part because they help balance out the risks of whistleblowing, other changes also contributed to the success. These include increased certainty that an award would...

221 The fraud was estimated to be around $100 billion per year or more in the last decade. Fines are assessed and recovery amounts can be triple, which leads to the large awards. Originally, the suits tended to involve defense contracting. Now, the focus has shifted to Medicare and other health fraud. Most cases end in settlements. The success of the FCA in recovering government funds has resulted in a proliferation of reward legislation at both the federal and state levels. However, for a variety of reasons, these state and federal laws have not been as successful as the FCA.\footnote{229}{See \textit{Sox and Whistleblowing}, supra note 219, at 1764–73; Bishara et al., supra note 212, at 95.} Crises caused by financial and corporate wrongdoing led to the passage of the Sarbanes-Oxley Act in 2002\footnote{230}{Sarbanes-Oxley Act of 2002, Pub. Whistleblowing legislation covering a wide variety of areas exists outside the reward structure. Today, all states have some form of whistleblower statutory protection and many states have several statutes. Numerous measures have also been enacted on the federal level. Additionally, courts have extended whistleblower protection under statutes not specifically passed to protect whistleblowers, and federal employees are protected under the Civil Service Reform Act and its numerous revisions. Despite all the legislation, there is no general whistleblower protection, and employees can “fall through the cracks” and not be protected. Thus, new whistleblower legislation and protections are being proposed and passed.

B. Efforts to Silence Whistleblowing and Voice

While legislators, scholars, and others have recognized the importance of employee voice through whistleblowing, business has been reluctant to embrace it. This is despite that intra-organizational disclosures can benefit the organization. The problems at Volkswagen are but one current example of failed reporting in the workplace. Not only do businesses not embrace whistleblowing, they often work against it. With their outsized power in contrast to individuals or consumer groups, they are succeeding in getting anti-whistleblowing legislation enacted. Businesses also put up barriers to voice within the organization. Three examples illustrate these efforts: “ag-gag” laws, non-disclosure agreements, and unrealistic performance pressure on employees, exemplified by recent disclosures at Wells Fargo.

Internal whistleblowing can be an efficient and inexpensive source of information about organizational mistakes and can stop problems quicker than if the information has to go outside the organization. 1. Ag-Gag Laws

Perhaps the most active legislative efforts to stifle disclosure involve the food production industry. Legislators in several states have enacted “ag-gag” laws – laws that prevent employees and other people from using undercover tactics to expose cruelty to animals and pollution caused by mega livestock operations.\(^{248}\) One tactic that has been used is to get a job in order to gather evidence of objectionable procedures and practices. Exposure can lead to enforcement actions by agencies and backlash from consumers against the operators and owners.\(^{249}\) The statutes vary, but generally make it a crime to gain unauthorized access to farming operations and/or to record or film activities on a farm or agricultural operation unless they have the owner’s permission.\(^{250}\) States do not put many resources into inspection and enforcement.\(^{251}\) For example, despite reports of cruelty to pigs in Illinois’ 12 million pigs a year market, the Illinois Bureau of Animal Health and Welfare found no animal welfare violations or infractions from 2011 through 2016.\(^{252}\) Thus, the way issues have been successfully raised is by individuals taking jobs in organizations and secretly recording the conditions and abuse.\(^{253}\)

North Carolina adopted a law allowing employers to pursue civil charges against employees who, by gaining access to the nonpublic areas of the employer’s facilities to take pictures, shoot video, or copy data or documents, use this information “to breach the person’s
duty of loyalty to the employer.” If challenged, it is unlikely to be upheld. Breach of the duty of loyalty was long ago found to be trumped by the public interest in whistleblowing. However, the threat of a lawsuit and possible punitive damages of up to $5,000 per day are likely to be a deterrent to employee voice until the statute is successfully challenged.

Idaho was one of the first states to pass ag-gag legislation. The law protected large agricultural operations, such as factory farms, by criminalizing a common animal abuse and mistreatment whistleblower tactic. The law made it a crime to obtain employment with an agricultural production, use force, threat, misrepresentation or trespass to enter an agricultural production facility, and obtain records of an agricultural production, with the intent to cause economic injury to the facility’s operations. Further, it criminalized entering an agricultural production facility not open to the public and, without express consent from the facility’s owner, making an audio or video recording of the conduct of the facilities operations.

In August, 2015, the Idaho statute was struck down as violations of the Free Speech and Equal Protection Clauses. The judge found the law to “pose[s] a particularly serious threat to whistleblowers free speech rights” and circumvent established “whistleblowing statutes by punishing employees for publishing true and accurate recordings on matters of public concern.” A key determinant in the ruling was the animus shown by legislators who compared animal rights activists to “terrorists, persecutors, vigilantes, blackmailers, and invading marauders who swarm into foreign territory and destroy crops. . .”

261 Id. at 1210. Wyoming has also enacted ag-gag legislation. WYO. STAT. ANN. §40-27-101 (2015) (amended 2016). State legislators received complaints from ranchers about environmentalists who went on their land to gather water samples to give to federal and state agencies. Richey, supra note 248. The trespass statute was then amended to make it illegal to trespass on open land and/or private property with the intent to collect “resource data.” Dan Frosch, Wyoming Trespassing Laws Under Fire, WALL ST. J., FEB. 19, 2016, AT A3. It provides for consequential and economic damages as well as recovery of litigation costs. WYO. STAT. ANN. §40-27-101 (2015) (amended 2016). The statute recently survived a challenge to its constitutionality under the First Amendment right to free speech. The court stated “[T]he United States Supreme Court “has never held that a trespasser or an uninvited guest may exercise general rights of free speech on property privately owned.”” W. Watersheds Project v. Michael, No. 15-CV-00169-SWS, 2016 U.S. Dist. LEXIS 88843 (D. Wyo. 2016). Other states have taken a different approach. Colorado, for example, offers immunity for those who report animal abuse. COLO. REV. STAT. § 18-9-209 (2005).

So far, attempts to stifle employee speech and whistleblowing have had mixed success. Indeed, they have even had some negative effects. For example, a study found that ag-gag laws eroded trust in farmers and increased support for animal welfare legislation. Andrew Amelinckx, New Study Finds “Ag-Gag” Laws Erode Trust in Farmers, MODERN FARMER, MAR. 29, 2016, http://modernfarmer.com/2016/03/ag-gag-laws-erode-trust/farmers/ (stating that the reaction was as strong among the demographic category of rural, conservative omnivores as among the category of urban, liberal, vegetarians). The study also indicated a negative perception of how well farmers are
There is another precedent that can be called on to overturn such a statute. During the Civil Rights era of the 1960s and 1970s, “testers” were used to gain evidence of housing and employment discrimination. For example, in employment opportunities, a company would get two resumes that were essentially identical except for the name. When the individuals show up for an interview, one is black and the other white. If the employer consistently chooses the white person, or tells the black applicant that the job has just been filled, etc., that is used as evidence of discrimination. Most courts eventually upheld such evidence despite the argument of lack of standing because the person did not really want the job or apartment and therefore there was no injury.

2. Provisions in Employment Contracts

One tactic used by employers to stifle whistleblowing is to require applicants and employees to sign agreements requiring them to take all disputes to arbitration. Many also require employees to not join in class actions. This practice grew after the Supreme Court, in Circuit City Stores, Inc. v. Adams, upheld a mandatory arbitration clause in a case involving discrimination and tort claims. These agreements are under attack in various ways. There have been several bills introduced in Congress to overturn the City Stores, Inc. v. Adams ruling, but they have so far been unsuccessful. The NLRB has taken the position that arbitration agreements banning class actions violate federal law guaranteeing the right of workers to concerted activity. The Consumer Finance Protection Bureau is seeking to ban mandatory

taking care of the environment. An earlier study of members of the cattle industry reported that 60% of the 500 readers did not think ag-gag laws were a good idea to pursue. Id. The study was published in BEEF Magazine. Id. Environmental groups and photographers were upset by the passage of the Wyoming law, not just animal rights activists. The National Press Photographers Association, among others, joined in a suit against it. Frosch, supra note 261.

Similarly, if a white person and a black person, matched as evenly as possible, try to rent an apartment and the white person is repeatedly chosen, again, that is evidence of discrimination. Havens Realty Corp. v. Coleman, 455 U.S. 363 (1982). l.

von Bergen, supra note 266.
arbitration clauses in many types of consumer contracts. The Labor Department has issued a rule that will allow investors to file class action lawsuits if they feel financial advisors working on retirement accounts are not doing so in the best interests of their clients. In general, however, the agreements are in effect. The disadvantage to whistleblowers of mandatory arbitration is that they are unlikely to get punitive damages. This leaves many whistleblowers who suffer retaliation in essentially the same place as they were before the whistleblower protection statutes were passed. They cannot sue in tort and the remedies in arbitration are inadequate. Additionally, employers are shielded from publicity about their wrongdoing, so society also suffers; for example, by preventing the public from understanding how prevalent certain problems and practices are.

Covenants are used to stifle speech in other ways. The use of contract law to try to suppress employee speech and whistleblowing is not new. Brown & Williamson asserted a confidentiality agreement against the main tobacco whistleblower in 1995, and Food Lion used similar agreements to stop evidence of its practices. The use of such agreements grew rapidly in the 1990s, and today they are almost ubiquitous. As noted, whistleblowing protections also grew rapidly during this period, and today valid whistleblowing is generally seen as trumping the interest in keeping the information secret when litigated. This does not mean that organizations no longer try to use them to stifle speech. The threat of a lawsuit can go far in keeping someone silent. It can also keep those who are aware of the threatened lawsuit against another person silent.

Perhaps in recognition of the ultimate futility of enforcing confidentiality agreements against whistleblowers, companies are trying to bolster their protection through additional agreements. For example, some companies are trying to thwart whistleblowing by requiring employees to sign agreements to forgo government whistleblower awards in order to be eligible for severance pay or to receive a commission. The Securities and Exchange Commission (SEC), which has recently stressed the importance of whistleblower information in helping to ensure protection for the securities markets, is investigating these agreements because they create

---

a chilling effect on reporting wrongdoing. An SEC Commissioner called it an intimidation through “pre-taliation” rather than through retaliation. In one case the SEC brought an enforcement action against BlueLinx Holdings for requiring outgoing employees to sign severance agreements that said they waived their right to monetary recovery if they filed a complaint with the SEC or other federal agency. In another case, it brought action against KBR for including improperly restrictive language in confidentiality agreements. It found the company in violation of Dodd-Frank whistleblower provisions because the company required witnesses in internal investigation interviews to sign confidentiality statements warning them they could be disciplined or fired if they discussed the matters with outside parties, including the government, without prior approval of the legal department.

3. Unrealistic Pressure on Employees: The Wells Fargo Example

Wells Fargo (Wells) was the king of cross selling among banks. It was also employing a system of high pressure performance management reinforcing an aggressive sales culture. The program strongly pushed employees to sign up customers for credit card accounts, overdraft services and other types of products. The pressure was so strong that many employees created fake accounts for customers and signed them up for things they did not want in order to meet sales goals. Employees reportedly opened around 565,000 credit card accounts which customers may not have wanted.

275 SEC Press Release, SEC: Companies Cannot Stifle Whistleblowers in Confidentiality Agreements, SEC (April 1, 2015), https://www.sec.gov/news/pressrelease/2015-54.html [hereinafter Companies Cannot Stifle Whistleblowers]; 12 U.S.C. § 78 u-6 (h) (2010). Dodd-Frank established whistleblowing’s importance to detecting wrongdoing in the markets by establishing a reward structure similar to that of the FCA (but with a jurisdictional limit that the recovery yield one million USD or more) and setting up a reporting structure. See 17 C.F.R. § 240 (2011).

Only several days after widespread publicity and arranging settlements did Wells announce it was revamping its compensation model – and then not until months later.\textsuperscript{287}

Even further, the Chief Executive of Wells, John Stumpf, blamed the staff for the wrongdoing.\textsuperscript{288} Wells may have provided avenues for whistleblowing and instructed employees as to what wrongdoing the executives were most concerned with, but not changing the incentives and pushing the responsibility for the wrongdoing to the lowest levels by the CEO did nothing to build the trust necessary to encourage voice. In fact, one could argue that it did just the opposite – provided an organizationally-sanctioned incentive for silence.

The fallout from the company’s actions continues. Wells has agreed to pay a $185 million fine in settlement with the Consumer Financial Protection Bureau,\textsuperscript{289} and has also settled with Office of the Comptroller of the Currency and the City Attorney of Los Angeles.\textsuperscript{290} It is under investigation by Congress and at least three states.\textsuperscript{291} Wells stock price has fallen, the chairman and CEO has resigned,\textsuperscript{292} and customer applications for credit cards and checking accounts have fallen by 20% and 25%, respectively.\textsuperscript{293}

Misconduct, like that of Wells Fargo’s, is a “systemic risk” in the financial and banking industries. To properly mitigate this risk, companies need employees to speak up. But before they will, they have to have some investment and trust in the organization. Rather than set unrealistic goals and routinely get rid of employees who do not meet them, it would be far better to lead with buy-in from below, and encourage rather than punish.

IV. Proposals for Workplace Practices

Although measures have been taken to counteract the effect, at-will employment as well as legislative and contractual measures are external forces that disincentivize the exercise of employee voice. Because a meaningful opportunity to have voice in the workplace is important to employees, the employer and society, these external barriers should be countered. Even though there are numerous laws designed to encourage external whistleblowing, the reality is that internal incentives are often still lacking; especially considering the advantages of earlier, non-public, informal recognition of problems or wrongful actions in the workplace. Yet, there are several actions employers can take to encourage employees to speak up.

A first step in promoting employee voice is to have strong statements and support from top management encouraging raising concerns and stressing a non-retaliation policy. This should have a prominent place in materials provided to new hires, and it should also be republished annually to all employees. To bolster the company’s policy, there should be a summary of activity in that annual message, and details regarding how the issues were resolved. It should also include measures taken against those who retaliated against employees who reported. Training should include what the organization considers wrongful and how to deal with it.

Furthermore, someone high in the organization should be appointed to monitor the reporting system. There should be more than one reporting channel in case one of the designated monitors is involved in the wrongdoing. Many companies have established hot lines to

---

296 For example, this could be done by category – e.g., 250 issues were raised regarding disputes between coworkers or dissatisfaction with supervisor actions (studies have shown that these kinds of “personnel” issues are the most common kinds raised). Co-worker disputes were mediated, and X% were resolved to the parties’ satisfaction. Also, X% were still in discussion.

297 A Word to the Wise, supra note 295, at 387. There is likely to be such a system in place in larger organizations because this is an EEOC best practice for sexual harassment legal compliance. Best Practices For Employers and Human Resources/EEO Professionals, U.S. EQUAL EMPLOYMENT OPPORTUNITY COMMISSION, https://www.eeoc.gov/eeoc/initiatives/e-race/bestpractices-employers.cfm (last visited Oct. 4, 2016). SOX has also
receive reports in response to SOX. The presumed advantage of this is anonymity for the whistleblower. Investigation of complaints should be swift and thorough. To the extent possible, the identity of the reporter should be protected, if so requested. The reporter should be kept informed of what is going on, including the result of the investigation. Measures taken against a retaliator should be commensurate with the retaliation.

In addition, the employer should incentivize employees to report wrongdoing. This need not be monetary. Building incentives into the organization’s reward structure may help the employer avoid the detriments of external whistleblowing. “[O]bservers of wrongdoing consider the costs and benefits of acting, along with other factors. The simplest interpretation of motivational theory would suggest that providing valued employer rewards for internal whistleblowing would increase its frequency.” It would also emphasize the employer’s desire for the activity. For example, having stories of how an individual who helped the organization address a problem got promoted would help employees see that speaking up about problem was valued in the organization.

An organization can have the best procedures and guidelines in place but without another feature, trust, they will not be used. Employees must trust that if they report, they will be taken seriously, something will be done, and negative consequences will not follow. If managers are trained on what to do with information that could point to wrongdoing or the need to take action, formal whistleblowing may not be needed. Like all other management schemes, it is the implementation that is important.

The rethinking of raises and bonuses can also encourage voice. For example, an employee who saves the company money through reporting that leads to the uncovering of embezzlement, could be given a percentage of the savings as a bonus. Information of illegal activity that helps stop it has many benefits to the company, some intangible like avoidance of negative publicity. This is also worthy of a monetary award. This person could also be identified as a valuable employee through a monthly assessment, and cited as someone who

made the adoption of established whistleblowing mechanisms necessary for all publicly traded companies. 15 U.S.C. §78j-1.

300 While large monetary awards have resulted in an increase whistleblowing (see discussion of the False Claims Act and its progeny above), something as simple as a prime parking space with the employee’s name on it could reinforce the message.

should move forward.\textsuperscript{305} Many companies already give incentives for useful suggestions,\textsuperscript{306} and the monthly meetings may be a more regularized way of capturing the information if suggestions are solicited and rewarded.

**Conclusion**

Increased employee voice in the workplace may result in increased job satisfaction and increased employee retention. The increased sense of control associated with employee voice is also linked to other positive outcomes such as increased physical and psychological well-being. For these reasons, it is paramount that organizations facilitate voice.

To facilitate voice in the workplace, employees should feel a sense of commitment to the well-being of the organization.\textsuperscript{307} Whistleblowing incentives and mechanisms should be seamlessly integrated into the feedback process of organizations with communication going both to and from managers rather than being set up as a separate system. Employees should also be incentivized to overcome the structural and perceived risks of whistleblowing. Any attempt to increase worker voice and whistleblowing should be done carefully and thoroughly; as these changes, improperly implemented, can lead to even more silence and wrongdoing.
