

Supplementary Figure 1: Dependency of IL-27 production on MyD88 and TRIF. IL-27(p28) release by BMDM from Wt mice, MyD88^{-/-} mice or TRIF^{-/-} mice. BMDM were stimulated with LPS (1 μ g/ml) for the indicated time periods and IL-27p28 quantified in supernatants by ELISA. Concentrations of IL-27p28 were significantly higher in supernatants from BMDM derived from Wt mice as compared to BMDM derived from MyD88^{-/-} or TRIF^{-/-} mice. ***P<0.001, one-way ANOVA.
