Appendix S3. Loci shared among individuals, where the size of the square correlates to the proportion shared (from 0 to 1, out of 41 615 total SNP loci) either between individuals (off-diagonal cells) or successfully amplified within an individual (diagonal cells). Values range from 1.2% loci shared between *C. adelostoma* and *C. vaginata* to 37.2% loci shared between *C. nova* and *C. nelsonii*.
