

EDITORIAL

10.1029/2018JA025651

Key Points:

- The Editors of *JGR Space Physics* thank everyone that served as a manuscript reviewer in 2017; we greatly appreciate your service
- The 1,448 scientists submitted 3,511 reviews on 1,146 unique manuscripts in 2017, numbers that are slightly down from the previous year
- The average time for a reviewer to submit a report is 20.5 days, with 64% of reports submitted within the requested 3-week window

Abstract The Editors of the *Journal of Geophysical Research Space Physics* extend a sincere and heartfelt thank you to the 1,448 scientists that conducted 3,511 manuscript reviews for the journal in calendar year 2017. We deeply appreciate the time and effort that you have devoted to the research community.

1. Introduction

The Editors of the *Journal of Geophysical Research Space Physics* extend a sincere and heartfelt thank you to those that conducted manuscript reviews for the journal in calendar year 2017. The journal relies on the willingness of experts in the field to forego other activities and do this vital service. We deeply appreciate the time and effort that you have devoted to the research community.

In 2017, 1,448 people submitted manuscript reviews for *JGR Space Physics*. This is smaller than the record-setting peak in 2016. The number of reviews totaled 3,511, also down by ~10% from last year. This almost exactly matches the drop in submissions, from 1,327 in 2016 to 1,148 in 2017. The main explanation for this is the rather large drop in special sections for the journal in 2017 compared to 2016. Not only were there fewer special sections but also their average size was smaller. For instance, the Measurement Techniques in Solar and Space Physics special section had over 100 papers in it, and the special sections relating to the MAVEN and Van Allen Probes missions each had over 50 papers. While publication dates are rolling and special sections can span multiple years, these three were largely published in 2016, contributing to that year's spike in activity.

Some of the people we ask to review do not agree to conduct reviews. In fact, there were 1,089 people in this category for 2017. Most of these are in the “not needed” category, meaning that an Editor sent out more requests than the number of reviews they wanted and, after that desired number of reviewers is reached, the others are “not needed,” even though they were asked. This practice of sending out more requests than reviewer slots helps speed up the process and also leads to the large number of requests that are “not needed.”

For those that submitted a review, the average number of reviews per person is 2.4, exactly the same as last year. Among the reviewers, there were 265 that conducted four or more for this journal, a number that is 16% higher than last year. Some other numbers to mention are that the average time for review submission is 20.5 days, with 64% submitted on time. These numbers are essentially the same as last year. Our ambition is to have all reviews completed in 3 weeks. The average time from submission (after quality control is complete) to first decision is 44 days, which is tied for the third fastest among AGU journals (behind *Geophysical Research Letters* and *Space Weather*). The two longest stages are securing reviewers and evaluation by reviewers, so reducing this time to first decision would require prompt responses on review requests and on-time reviews. Another long time interval in the publication chain is between first decision and receipt of the revised manuscript. Authors take an average of 37 days to revise a *JGR Space Physics* manuscript.

A summary of reviewing statistics is presented in Table 1. There is a small amount of carryover of invitations not yet accepted or declined as of the end of each year (both at the end of 2016 and at the end of 2017) that makes some of the number not quite add up exactly as you might expect. This difference is small. The columns should be self-explanatory in Table 1, but some of the rows should be defined. Specifically, “no response” means that several requests were sent to the potential reviewer and, when they did not answer, we stopped sending requests and moved on to a different potential reviewer. The “asked but not needed” means that other potential reviewers filled the requests before this person could respond. We would

Table 1
Reviewing Statistics for JGR Space Physics in 2017

	Did one or more	Did none	Total count	Average per person
People in category	1448	1098	2546	—
Total requests to review	5648	2070	7718	3.03
Declines	834	867	1701	0.67
No response	157	277	434	0.17
Asked but not needed	1145	873	2018	0.79
Requests excluding “asked but not needed”	4503	1197	5700	2.24
Reviews completed	3511	0	3511	1.38
Reviews pending	19	9	28	0.01
Total acceptances ^a	3530	9	3539	1.39
Acceptance rate #1 ^b	62.5%	0.4%	45.8%	—
Acceptance rate #2 ^c	78.4%	0.8%	62.1%	—

^aTotal acceptances is the sum of “Reviews completed” and “reviews pending.” ^bAcceptance rate #1 is calculated as “Total acceptances” divided by “Total requests to review.” ^cAcceptance rate #2 is calculated as “Total acceptances” divided by “Requests excluding ‘asked but not needed.’”

decisions, a total of 2,432 decisions were made by the Editors, which calculates to an average of 1.1 revisions per final decision.

2. Referees for 2017

The Editors would like to individually acknowledge all of those that served as a reviewer of a manuscript for *JGR Space Physics* in 2017. Table 2 lists all of the names, with those in italics being the people that conducted four or more reviews for the journal. The list is generated from the Geophysical Electronic Manuscript Submission system, so if you have multiple accounts there, then your name is listed twice in the table below. Thank you again for all of your hard work in support of this journal.

prefer a fast “decline” rather than a “no response” de facto decline. The “no response” number is quite small, less than 10% of requests, indicating that the space physics community takes these requests seriously. Furthermore, the “decline” number is much smaller than the “total acceptances” value, indicating that space physicists often say yes to reviewing requests from this journal. Again, this willingness to serve is greatly appreciated. The category “Requests excluding ‘asked but not needed’” has several types of responses incorporated into it—acceptances, declines, no response, and those requests still pending at the end of the year. The two acceptance rates in the last two rows of Table 1 have the same numerator but different denominators, one that includes the “asked but not needed” category and another that excludes this editorial-practice-related value.

The Editors of *JGR Space Physics* made final (accept or reject) decisions on 1,146 manuscripts in 2017. Ninety percent of these, 1,037, were sent out for review. As of late April 2018, 721 were accepted, yielding an acceptance rate of 63%. This number is very slightly lower than last year’s acceptance rate. Including “revision”
