This is the author manuscript accepted for publication and has undergone full peer review but has not been through the copyediting, typesetting, pagination and proofreading process, which may lead to differences between this version and the [Version of Record](#). Please cite this article as doi: [10.1029/2018GL078303](https://doi.org/10.1029/2018GL078303)

On behalf of the journal, AGU, and the scientific community, the editors would like to sincerely thank those who reviewed manuscripts for *Geophysical Research Letters* in 2017. The hours reading and commenting on manuscripts not only improves the manuscripts, but increases the scientific rigor of future research in the field. Many of those listed below went beyond and reviewed three or more manuscripts for our journal, and those are indicated in italics. The refereeing contributions they made contributed to 6553 individual reviews of 2782 manuscripts. Thank you again. We look forward to the coming year of exciting advances in the field and communicating those advances to our community and to the broader public.
