Abstract:

On behalf of the journal, AGU, and the scientific community, the Editors would like to sincerely thank those who reviewed manuscripts for *Geophysical Research Letters* in 2018. The hours reading and commenting on manuscripts not only improves the manuscripts but increases the scientific rigor of future research in the field. We particularly appreciate the timely reviews, in light of the demands imposed by the rapid review process at *Geophysical Research Letters*. With the revival of the "major revisions" decisions, we appreciate the reviewers' efforts on multiple versions of some manuscripts. Many of those listed below went beyond and reviewed three or more manuscripts for our journal, and those are indicated in italics. In total, 4484 referees contributed to 7557 individual reviews in journal. Thank you again. We look forward to the coming year of exciting advances in the field and communicating those advances to our community and to the broader public.

Referees for 2018

Individuals in italics provided three or more reviews for Geophysical Research Letters during the year.
