8

9 Abstract:

10 On behalf of the journal, AGU, and the scientific community, the Editors would like to sincerely thank
11 those who reviewed manuscripts for Geophysical Research Letters in 2018. The hours reading and
12 commenting on manuscripts not only improves the manuscripts but also increases the scientific rigor of
13 future research in the field. We particularly appreciate the timely reviews, in light of the demands
14 imposed by the rapid review process at Geophysical Research Letters. With the revival of the “major
15 revisions” decisions, we appreciate the reviewers' efforts on multiple versions of some manuscripts.
16 With the advent of AGU's data policy, many reviewers have helped immensely to evaluate the
17 accessibility and availability of data associated with the papers they have reviewed, and many have
18 provided insightful comments that helped to improve the data presentation and quality. We greatly
19 appreciate the assistance of the reviewers in advancing open science, which is a key objective of AGU's
20 data policy. Many of those listed below went beyond and reviewed three or more manuscripts for our
21 journal, and those are indicated in italics.

22 In total, 4647 referees contributed to 7841 individual reviews in journal. Thank you again. We look
23 forward to the coming year of exciting advances in the field and communicating those advances to our
24 community and to the broader public.
