We will share these slides on our [website announcements page](#).

Types of Data

Primary

Data you or people you collaborate with directly design, collect and administer to address a specific topic of interest.

Secondary

Data collected and processed without your direct control but used by you to address a specific research interest or project. Secondary data can also be data you or people you collaborate with directly design, collected but used for research that is independent from its original intent.

Why Use Secondary Data?

Efficiency-The collection of primary data, both qualitative and quantitative is time consuming and expensive. Good secondary data should come in a format that facilitates research.

Variety-The quantity of secondary data has grown tremendously. Many if not most research questions can be explored with some existing data set.

Theory Testing-Secondary data allows for the controlled testing of research framework and theories in a manner that allows for replication and validation of results.

Generalizability-Because the best secondary data takes advantage of sampling distributions it allows for results to be generalized to a broader population than many qualitative studies. It allows for the testing of small study results on a broader population.

NACDA Program on Aging

The NACDA data archive has spent the past 40 years identifying, gathering and organizing data on aging and the aging life course so we can share these resources with the research community.

NACDA is part of ICPSR.

Where do I get Data?

Secondary data is increasingly available from a dizzying array of suppliers.

The internet has greatly facilitated the spread of these resources and allowed them to be offered for little and increasingly no cost:

Federal Resources: Federal websites such as Census, NCHS, CMS, and NIH offer access to vast storehouses of data.

University Resource: Most universities maintain private collections of research data from various sources. Many faculty and funded research centers offer their research data as a public good (i.e. HRS at Michigan, Family Life Studies at Rand).

Data Archives: Organizations that *specialize* in the preservation, enhancement and distribution of research data.

The National Archive of Computerized Data on Aging is one such organization...

About NACDA

Data on Aging

Deposit - Share - Preserve

Download - Analyze - Cite

Began as a **research concept** in 1978/79 by the Administration on Aging

Funded in **1984** by the National Institute on Aging

28 public use datasets first offered on the internet in **1992**

Now **over 13,000 datasets** are available!

Thousands of
Free
Datasets

Accessible
Anytime

nacda-aging.org

Who Are NACDA's Users?

- **Students** looking for a thesis topic
- **Instructors** looking for research material to using classroom teaching
- **Researchers** looking for new opportunities
- **Non-Academic professionals** (journalists, etc.)
- **Member Institution Affiliates** (Data Librarians, Funders, etc.)

Data Available From NACDA

- Biomeasures
- Cognitive abilities
- Social behaviors
- Relationships
- Physical health

Search for Data

- By Variable

- [All studies in the variables database](#)

Statistics

[1,549 studies](#)[1,031,509 variables](#)[23,435 publications](#)

How to Search Effectively

- Search by keyword:
`dementia, "retirement planning"`
or by entering a research question:
`how many people are caregivers?`
- Use quotes for phrase searches; use the minus sign to remove items from results:
`"leisure activities" -"sporting events"`
- A Boolean "and" is inferred for multiple search terms.
- [Stemming](#) is automatic; do not use an asterisk.
- Search is not case-sensitive.

Search for Specific Variables

The Social Science Variables Database enables users to search for variables across datasets, compare results, and download data.

CRELES: Costa Rican Longevity and Healthy Aging Study (Costa Rica Estudio de Longevidad y Envejecimiento Saludable) Series

The Costa Rican Longevity and Healthy Aging Study (CRELES, or "Costa Rica Estudio de Longevidad y Envejecimiento Saludable") is a set of nationally representative longitudinal surveys of health and lifecourse experiences of older Costa Ricans. CRELES was conducted by the University of Costa Rica's Centro Centroamericano de Población and Instituto de Investigaciones en Salud, in collaboration with the University of California at Berkeley.

Baseline CRELES household interviews were conducted primarily in 2005, with 2-year follow-up interviews in 2007 and 2009. The sample was drawn from Costa Rican residents in the 2000 population census who were born in 1945 or before, with an over-sample of the oldest-old (ages 95 and over). The main study objective was to determine the length and quality of life, and its contributing factors in the elderly of Costa Rica.

The series includes data on a broad range of topics including self-reported physical health, psychological health, living conditions, health behaviors, health care utilization, social support, and socioeconomic status. The data also include measured (biomarkers) and observed health indicators as well as mortality information provided by surviving family members.

The sampling weights specific for each wave (variables "ponde_r2" and "ponde_r3") must be used when computing population estimates for 2007 with wave 2 or 2009 with wave 3 data. In prospective longitudinal analyses, however, is advisable to use the sampling weights provided for the baseline or wave 1 survey. The sampling weights are available in the tracking data file named "TrackCRELES".

Each data set can be linked with the identifier variable CASEID.

ICPSR maintains the CRELES Pre-1945 data, the CRELES 1945-1955 Retirement Cohort (RC) can be accessed by visiting the [CRELES project website](#).

Project Description

Summary

As a refinement to MIDLIFE IN THE UNITED STATES (MIDUS II), 2004-2006 (ICPSR 4652), a sample of African Americans from Milwaukee was included to examine health issues in minority populations. Areas of the city of Milwaukee, Wisconsin, were stratified according to the proportion of the population that were African American. Those areas with high concentrations were sampled at higher rates than areas with lower concentrations. Area probability sampling methods were used along with population counts from the 2000 United States Census to identify potential respondents. Field interviewers screened households to determine if they contained any African American adults. There was additional screening to achieve an appropriate age/gender distribution in a manner similar to what was done for the original MIDUS sample (NATIONAL SURVEY OF MIDLIFE DEVELOPMENT IN THE UNITED STATES (MIDUS), 1995-1996 [ICPSR 2760]). Milwaukee respondents were interviewed in their homes using a Computer Assisted Personal Interview (CAPI) protocol and afterwards asked to complete a Self-Administered Questionnaire (SAQ). All measures paralleled those used in the larger MIDUS I and II samples. After successful completion of the Project 1 survey, some participants were eligible to participate in other MIDUS projects (2

Welcome to the NACDA-ICPSR Colectica Portal!

The NACDA-ICPSR Portal facilitates efficient comparisons of **longitudinal data**, focusing on data on aging populations. The Portal is based on the [DDI metadata standard](#) and is powered by [Colectica software](#).

The NACDA-ICPSR Portal is supported by the **National Institute on Aging** U24AG056918, and is managed by NACDA staff. The [National Archive of Computerized Data on Aging \(NACDA\)](#) is part of ICPSR; find out more and discover thousands of **FREE** data resources by visiting our sites!

Discover more [Longitudinal Data Portals](#), such as for the [Midlife in the United States Study \(MIDUS\)](#) by visiting the Colectica website.

Please note that the credentials required below are independent from your ICPSR MyData credentials.

Please contact us at icpsr-nacda@umich.edu for questions about the Portal.

Share Data Using NACDA

Deposit Data - NACDA welcomes and encourages deposits of digital data on aging.

Deposits are made using a secure form to describe the data collection and upload content. Users must have or [create a MyData](#), Facebook, or Google account to sign in to the deposit form.

NACDA has two options for sharing your data!

NACDA offers curation services as staff obtain, process, preserve, and disseminate electronic data to researchers for secondary analysis in aging research. After a data collection is deposited with NACDA, the data and documentation will be reviewed, enhanced, and made available in several widely used formats, including ASCII, tab-delimited (for use with Excel), SAS, SPSS, and Stata. Documentation is provided as PDF.

Deposit to NACDA

The NACDA-Open Aging Repository (NACDA-OAR) offers free self-publishing options for gerontological researchers to share their research projects. Data collections published in NACDA-OAR are immediately distributed as-is for research use in the same condition and format submitted by the depositor.

Deposit to NACDA-OAR

Tips for Preparing Data for Deposit at NACDA

Providing a Complete Deposit

What Happens After Depositing

Data Management Plans Resources

The main idea is to provide **complete** data, documentation, and metadata (study level and variable level) so that your data can be easily reused and replicated. Preparing your data will help reduce the time it takes to fully curate it, increase secondary usage, ensure consistency in use across statistical packages, and ultimately stand the test of time against changes in technology and software. **How do you ensure your materials are "complete"? What should your deposit include?** Review our [Data Sharing Best Practices for NIA Funded Research](#).

Need help assessing how to prepare your materials or address data confidentiality? Please [contact us](#).

Review our [Depositor Agreement](#) and [Depositor Checklist](#) (based on best practices) for more details.

For deposits that involve physical materials, please email deposit@icpsr.umich.edu.

Sharing Data Using NACDA – 2 Options

Curated NACDA Deposits - Prepare to provide:

- Title
- PI
- Description
- Data Files
- Codebook
- Questionnaire
- Merging and Weighting Syntax
- Methodology Info
- User Guide

Self-Published NACDA-OAR Deposits - Prepare to provide:

- Title
- PI
- Description
- Data Files (request permission for replication data)
- Codebook
- Questionnaire
- **Replication Syntax**
- Methodology Info
- User Guide

NACDA (Curated) Data Sharing

- The NACDA team reviews the materials to assess **quality and priority**
- We reach out to depositors about any questions we have to **ensure the materials are complete**
- Then we send the materials to the **Curation Team**, where a Data Curator uses the data and documentation to build a study description, enhance, convert, and quality-check the data, approve the data collection for distribution on the ICPSR website, and archive the data for **long-term preservation**
- The curation process timeframe varies based on our priorities and resources, as well as the condition of the materials
- The **National Institute on Aging (NIA)** funds our project; therefore NIA funded research is prioritized.

About the NACDA - Open Aging Repository

The NACDA - Open Aging Repository (NACDA-OAR) from the National Archive of Computerized Data on Aging (NACDA) offers free self-publishing options for gerontological researchers to share their research projects. Data collections published in the NACDA-OAR are immediately distributed as-is for immediate research use. NACDA-OAR services are primarily meant to be a resource for NIA-funded projects, although all aging-related data may use the service.

NACDA-OAR self-publications should include all data, annotated program code, command files, and documentation that are needed to replicate research findings. For general instructions for publishing data, see the [NACDA-OAR Deposit Instructions](#). For best practice in preparing data for sharing, please refer to [ICPSR's Guide to Social Science Data Preparation and Archiving](#).

[Start Your Deposit](#)

NACDA's Role

NACDA does not alter datasets deposited in NACDA-OAR in any way. Data are distributed in the same condition and format submitted by the depositor.

NACDA-OAR is one of many services provided by the [NACDA Program on Aging](#) to archive and promote gerontological research, aging health and a better understanding of the life course. Please contact NACDA at icpsr-nacda@umich.edu with any questions you might have about your data and archiving options.

NACDA staff may review data deposited and published to the NACDA - Open Aging Repository at random. If any issues are found during these random reviews, NACDA will contact depositors to remediate the concerns. In the event any data contain direct identifiers or pose a risk to respondent anonymity, NACDA reserves the right to make the data unavailable.

Confidentiality and Copyright

Researchers publishing data in NACDA-OAR are entirely responsible for ensuring the confidentiality of their research subjects. Self-publishers are also required to affirm that they have the right to publish this material. NACDA-OAR requires written permission for distribution of data, but copyright remains with the author.

Why Self Publish with NACDA-OAR?

- You control the content
- Version control
- Quick availability and DOI
- Discoverable through ICPSR and NACDA site searches
- Great for code sharing and replication data

About Us

The National Archive of Computerized Data on Aging (NACDA), located within ICPSR, is funded by the National Institute on Aging. NACDA's mission is to advance research on aging by helping researchers to profit from the under-exploited potential of a broad range of datasets.

NACDA acquires and preserves data relevant to gerontological research, processing as needed to promote effective research use, disseminates them to researchers, and facilitates their use. By preserving and making available the largest library of electronic data on aging in the United States, NACDA offers opportunities for secondary analysis on major issues of scientific and policy relevance.

The NACDA staff represents a team of professional researchers, archivists and technicians who work together to obtain, process, distribute, and promote data relevant to aging research.
