

Supplementary Figure 2. Study of surface markers expression by USCs (Representative sample)

Co-stimulatory molecule, CD40, MFI expression on B cells (CD19⁺) following 24 hours of USC co-culture (2695±205 vs 1735±461 MFI),

Values are presented as mean±SEM. P values were determined by paired t-test, *p<0.05.
