PROJECT HISTORY

Exploring Open Access Ebook Usage

Hawkins, K.. and O'Leary, B,

<http://dx.doi.org/10.17613/8rty-5628>

2020-2021 PROJECT OBJECTIVES

- ❑ Develop & pilot Data Trust infrastructure
 - Personas and use cases
 - Open-source technologies
- ❑ Document OA eBook supply chain
- ❑ Model sustainability, governance, and policy
- ❑ Engage global OA monograph publishing community

Principal Investigator:

Kevin Hawkins (University of North Texas)

Co-Principal Investigators:

Lucy Montgomery (Curtin University)
Cameron Neylon (Curtin University)
Brian O'Leary (Book Industry Study Group)
Katherine Skinner (Educopia Institute)
Rebecca Welzenbach (University of Michigan)

Staff:

Data Trust Program Officer
Christina Drummond (Educopia Institute)

2020-2021

Developing a Pilot Data Trust for Open Access Ebook Usage

Exploring Open Access eBook Usage (OAeBU)

This two-year project acts upon the recommendations that resulted from five years of planning, as documented within the "[Exploring Open Access Ebook Usage](#)" white paper published by the Book Industry Study Group in 2019. Through December 2021, this pilot project will develop and test infrastructure, policy and governance models to support a diverse, global data trust for usage data on open access (OA) monographs. As an international cooperative managed by the community of stakeholders in scholarly communications and operating a secure data repository and member dashboards, this data trust will be designed to align with the priorities of authors and institutions while respecting emerging ethical norms in the use of metrics. More information about the project is available within [the grant narrative](#) and [Data Management Plan](#).

Help Build It | Call for Community Engagement

[Join](#) the project's discussion forums and working groups listed below to share your perspective and provide input directly to the project team and its advisors.

Stakeholder Discussion Forums

Open, public user communities for peers to discuss and inform issues relating to the project.

DATA STEWARDSHIP MECHANISMS

Technical controls

- Access
- Privacy
- Cybersecurity

Policy i.e. ethical guidelines

- Data aggregation
- Data visualization
- Scholar-specific analytics

Contractual terms

- Common clauses re: usage data transfer and data (re)use

UNDERSTAND DATA ISSUES & ECOSYSTEM

OA BOOK USAGE DATA ECOSYSTEM, SUPPLY CHAIN, AND DATA FLOWS

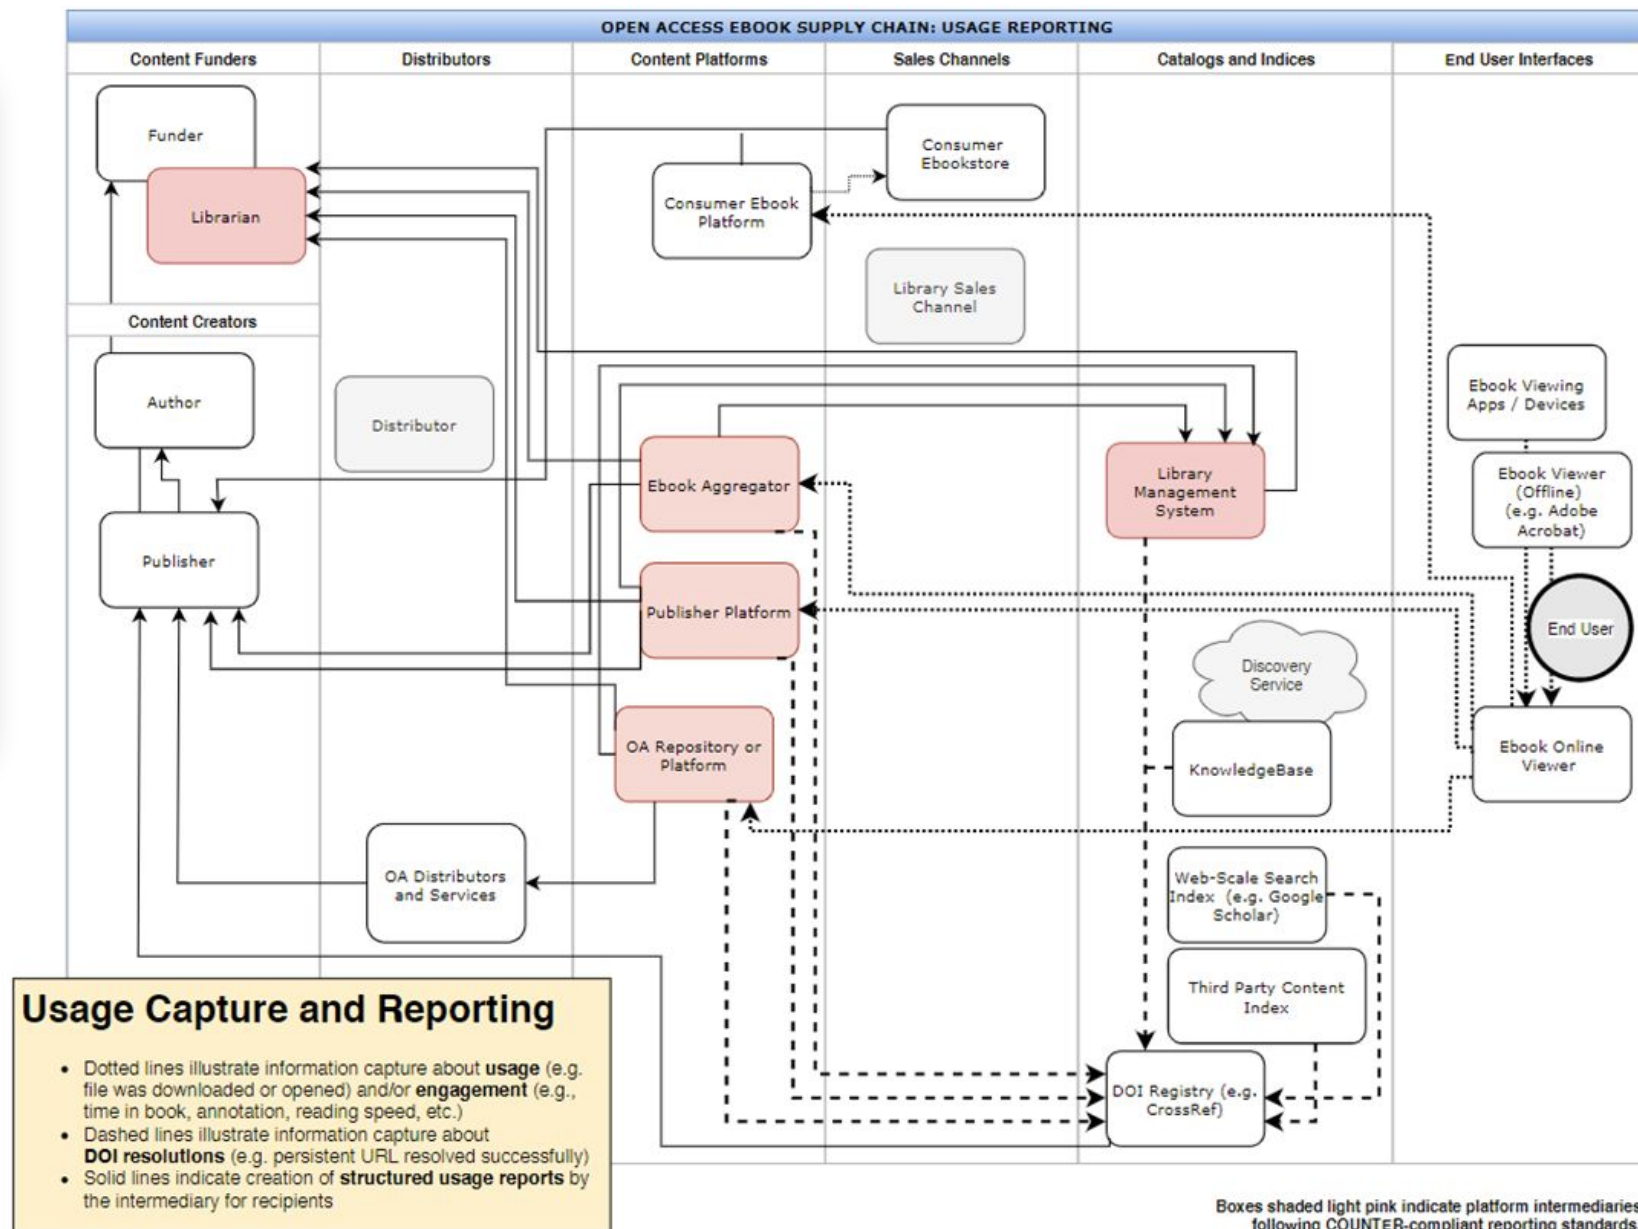

Open Access eBook Supply Chain: Usage Reporting

Clarke M. and Ricci L., *Open Access eBook Supply Chain Maps for Distribution and Usage Reporting*

<https://doi.org/10.5281/zenodo.4681870>

Developing a Pilot Data Trust
for Open Access Ebook Usage

Lessons learned from the supply-chain study

- ❑ Journal-based standards and models are a poor fit for OA books
- ❑ The supply chain is built for paid access and incentives are aligned for paid access – not necessarily for OA
- ❑ Distribution processes are complex and do not easily handle updates, including changes to a title's OA status
- ❑ The large and growing number of platforms that deliver OA books to end users creates challenges for usage reporting
- ❑ Existing metadata standards and practices are not yet firmly implemented for OA monographs, and some are insufficient

DIFFICULTIES VISUALIZING OA EBOOK USAGE

Finding the “right” settings: between an unsatisfactory reality and an imaginary solution

Many separate data streams & sources (undesirable state)

“Everything” “Completely”
“Aggregated” (imaginary state)

Private, mediated, interpretation needed (undesirable state)

“Completely” “Transparent,”
“Publicly” “Accessible” (imaginary state)

One canned report for everyone (undesirable state....?)

Completely customizable, query by query, user by user (imaginary state)

“...potential for achieving economies of scale and for taking advantage of network effects, to address resource challenges facing individual stakeholders and allow comparison and benchmarking to benefit all stakeholders”

OA EBOOK USAGE DATA TRUST
SUPPORTING COMMUNITY-GOVERNED SHARING OF QUALITY, INTEROPERABLE OA BOOK USAGE DATA

MISSION
Champion strategies for improved publication and management of open-access books by exchanging reliable usage data in a trusted, equitable, and community-governed way

IMPACTS
Reduced overhead: Less OA usage data aggregation and processing burden across the scholarly communications ecosystem through:

- **More efficient** data sharing and processing agreements and workflows
- **Trusted usage data processing** that is accountable, certified, and transparent

Cleaner, extensible, richer and more granular OA usage data accessible from diverse data sources

Better decision making is enabled for diverse publishing stakeholders through

SERVICES
Streamlined data exchange among critical mass of platforms and publishers including:

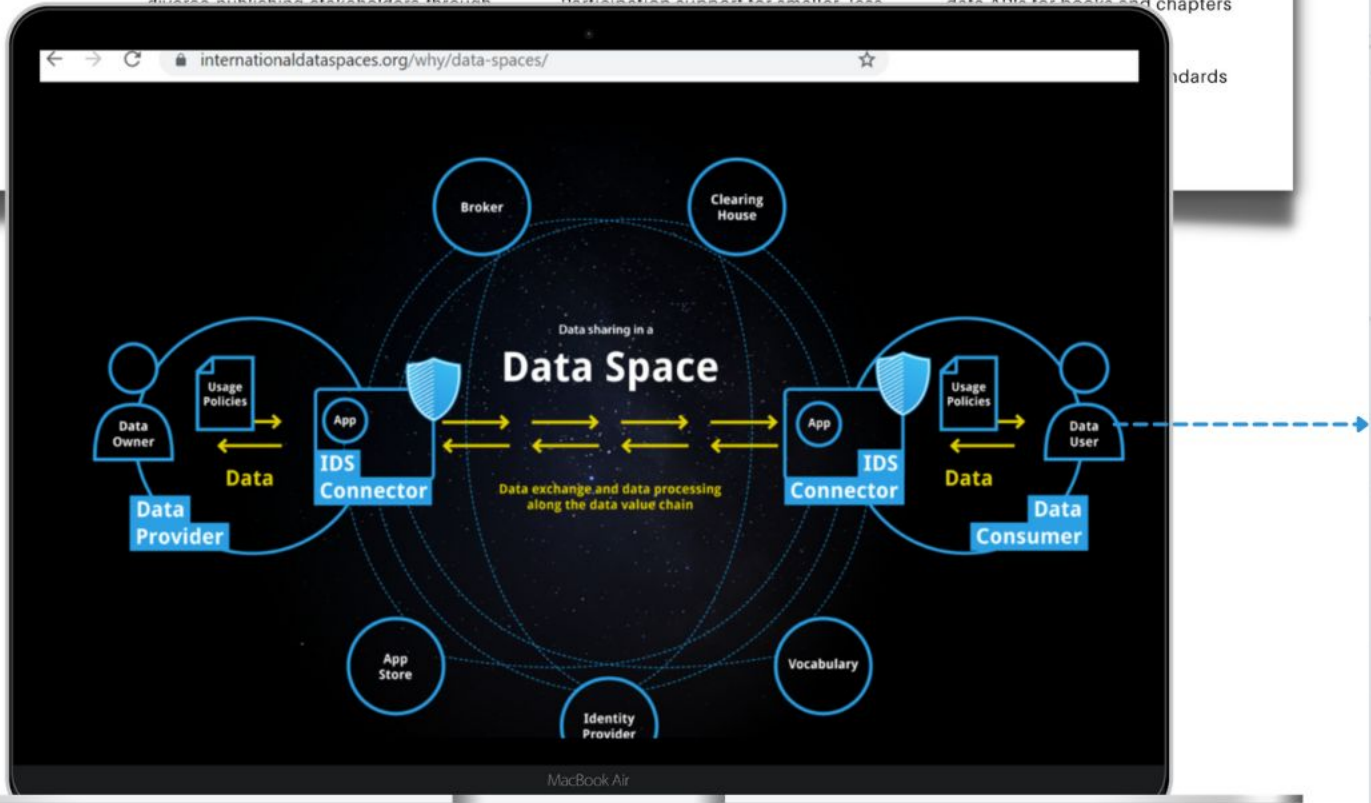

- Development and governance of multi-party data agreements addressing data sharing, processing and use
- Standardized data processing, curation, and linking according to extensible community standards
- Cleaner, consistent provision of multi-platform usage data via APIs and COUNTER reports

Transparent accountability mechanisms to ensure data quality and trust

Participation support for smaller publishers

PROJECT OUTPUTS

- "Rule Book" addressing data sharing, processing, security, and use for data trust participants
- Community standard for contractual clauses for usage Data Sharing Agreements (DSAs)
- Industry-trusted data-controlling systems and processes
- Process for certifying and auditing agreement adherence by data exchange, data providers and data users
- Published data processing algorithms
- Published exchange data inventory
- Data on ROI of exchange participation
- Multi-platform aggregated usage data APIs for books and chapters

MISSION
Providing trusted, easy-to-use OA ebook usage analytics to the publishing community to accelerate OA program strategy development and support operations.

IMPACT
A diversity of publishers have equitable access to OA eBook usage analytics and reporting

SERVICES
A well designed dashboard/analytics system with community validated defaults that can be adapted by publishers to address the most immediate stakeholder needs that they want to serve.

The Minimum Viable Product (MVP) at launch would include:

Publisher Analytics & Visualizations that

- connect usage data to other internal publisher data to surface the impacts of strategy, marketing, etc.
- span across the publisher corpus (including closed books)

Author Reporting Support

- Author-facing self-service dashboard that displays aggregate usage as well as usage broken out by platform/service and by discrete subject areas

Institutional Reporting Support

- Self-service dashboards with downloadable graphics that report impacts and usage to:
 - university administrations
 - libraries
 - sponsors / funders

Responsible Benchmarking:

- Ensuring benchmark comparisons are fair, transparent, responsible, and made with clear context
