Figures S1

Tables S1 to S4

## Introduction

This file includes the model outputs from our phase-equilibrium modeling, i.e. the pressure and temperature phase diagrams for three bulk-rock compositions, the whole-rock compositions used for the phase equilibria calculations, and all the tables with the data needed to reproduce the petrophysical properties shown in Figure 3.

**Figure S1.** Pressure–temperature ( $P$ – $T$ ) phase diagrams calculated for a (a) harzburgite, (b) lherzolite, and (c) dunite in the CaO–FeO–MgO–Al<sub>2</sub>O<sub>3</sub>–SiO<sub>2</sub>–H<sub>2</sub>O system. The grey bar shows the uncertainty associated with the phase equilibrium modeling ( $\pm 50$  °C; Powell & Holland, 2008). The black solid line shows the Moho  $P$ – $T$  path from Manea & Manea (2011), and the shaded area shows the uncertainty associated with the thermal model ( $\pm 75$  °C; Peacock, 2009)

**Table S1.** Modeled mantle bulk-rock compositions (wt.%).

	Harzburgite	Lherzolite	Dunite
SiO <sub>2</sub>	38.52	39.54	34.46
Al <sub>2</sub> O <sub>3</sub>	0.68	2.90	0.85
FeO	7.04	8.09	10.35
MgO	39.37	36.33	39.72
CaO	0.80	0.66	0.26
H <sub>2</sub> O	13.60	12.48	14.37
Total	100.00	100.00	100.00
X Mg	0.85	0.82	0.79

$$X \text{Mg} = \text{MgO}/(\text{MgO}+\text{FeO})$$

**Table S1.** Modeled mantle bulk-rock compositions (wt.%).

**Table S2.** H<sub>2</sub>O content evolution during subduction of the wet ultramafic portion of the Cocos oceanic lithospheric mantle.
