

Supplementary Index

Table S1. Association Between Hospital Admission and Patient-, Encounter-, and Facility-Level Characteristics by Emergency Care-Sensitive Condition, Overall and by Age Group

Additional analyses evaluating the impact of patient-, encounter-, and facility-level characteristics. The main findings adjusted for patient- and encounter-level characteristics. (PDF, 10 pages, 406 KB, Tables S1a-j)

Figure S1. Variation in the Risk-Standardized Admission Rates for Emergency Care-Sensitive Conditions, by Age Group

Violin plots of the distribution of RSAR for the identified ten most common ECSCs by age group. (PDF, 1 page, 147KB, Figures S1a,b)

Table S2. Variation in Emergency Care-Sensitive Condition-Specific Risk-Standardized Admission Rates and Adjusted Admission Rates (excluding transfers)

Sensitivity analysis excluding transfers from the hospital admission measure definition. (PDF, 2 pages, 81KB, Table S2)
