Meet the team

Ethan Davis

ML/Computer Vision Lead

B.S.E. EECS '22

Marcela Lebrija

Design and Manufacturing Lead

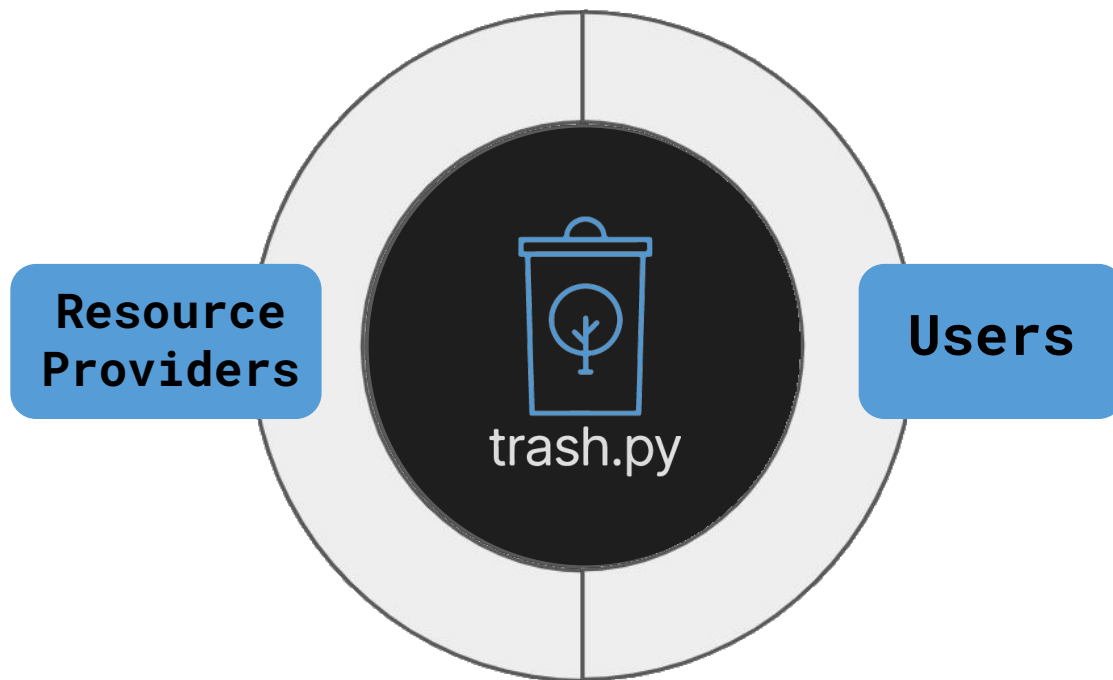

B.S.E. Mechanical Engineering '22

Did you know?

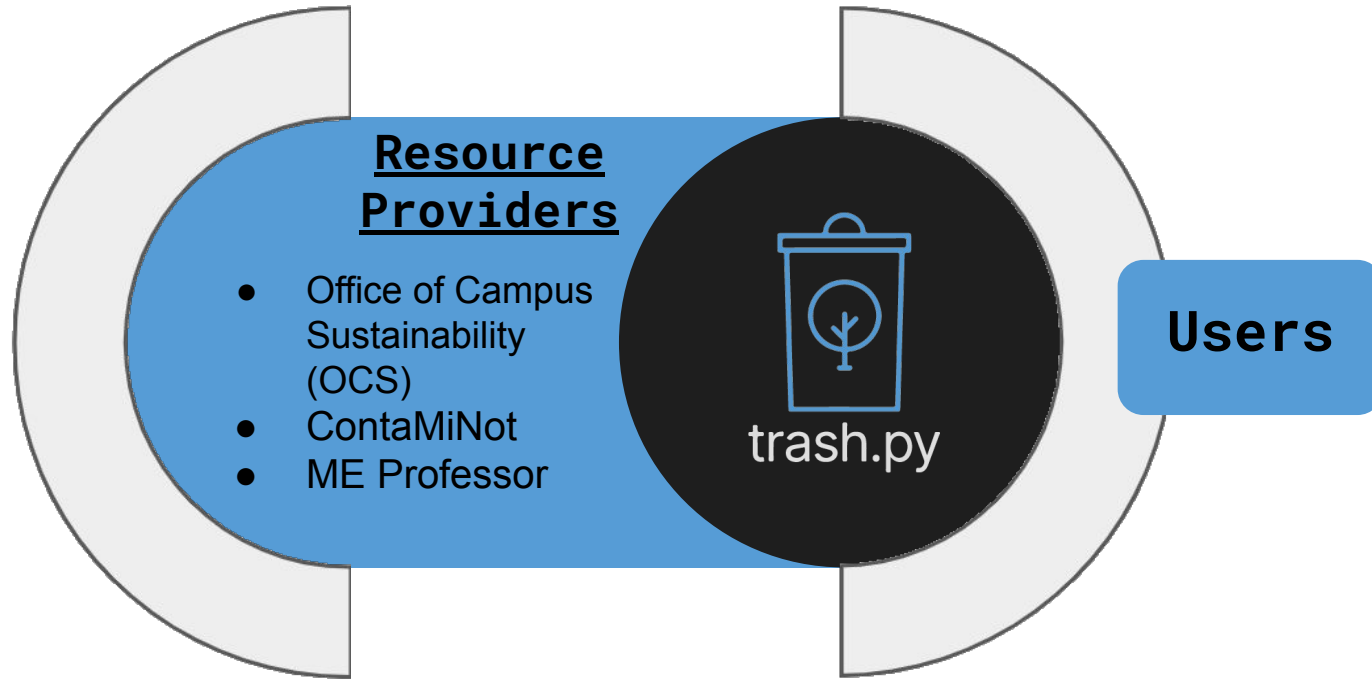

91%

of plastic **doesn't get recycled** and just sit in landfills annually

Stakeholders

Stakeholders

Pain Points

1. Dirty Recycling
2. Lost Recyclables
3. Decision anxiety
4. System breakdowns

Analysis from OCS Data

40%

of recyclables are **contaminated** on campus

Analysis from OCS Data

Contaminants by Type

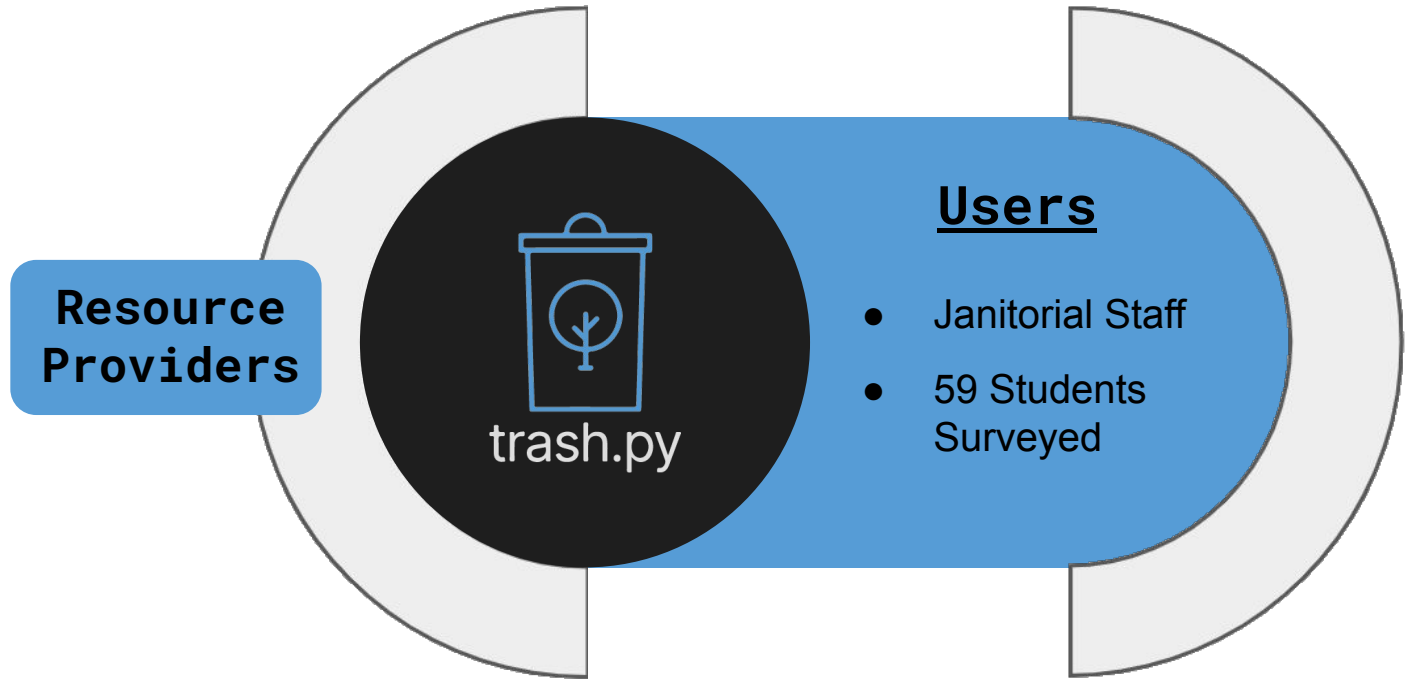

- Coffee Cups
- Plastic Bags
- Paper Towels/Tissue
- Unacceptable Food Packages

Stakeholders

Stakeholders

Of students surveyed...

10%

feel **strongly confident** that they dispose waste in
correct receptacles

Of students surveyed...

62%

say they use **other bin** if recyclable or landfill is overfull

Of students surveyed...

60%

are happy if they are **not expected to make any decisions**
while disposing of waste

This is a
problem

The Solution:

trash.py

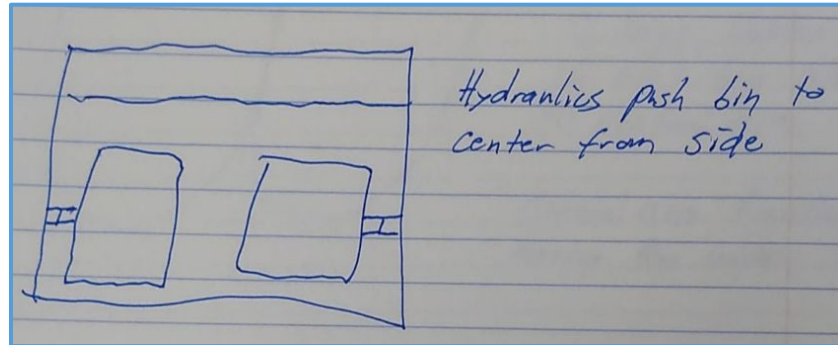

Brainstorming Design

Example concept #1

Brainstorming step	# ideas
Group/Individual Brainstorming:	44
Final Filter:	10

Example concept #2

Our Design:

Current michigan
plastic bins
Staging Area

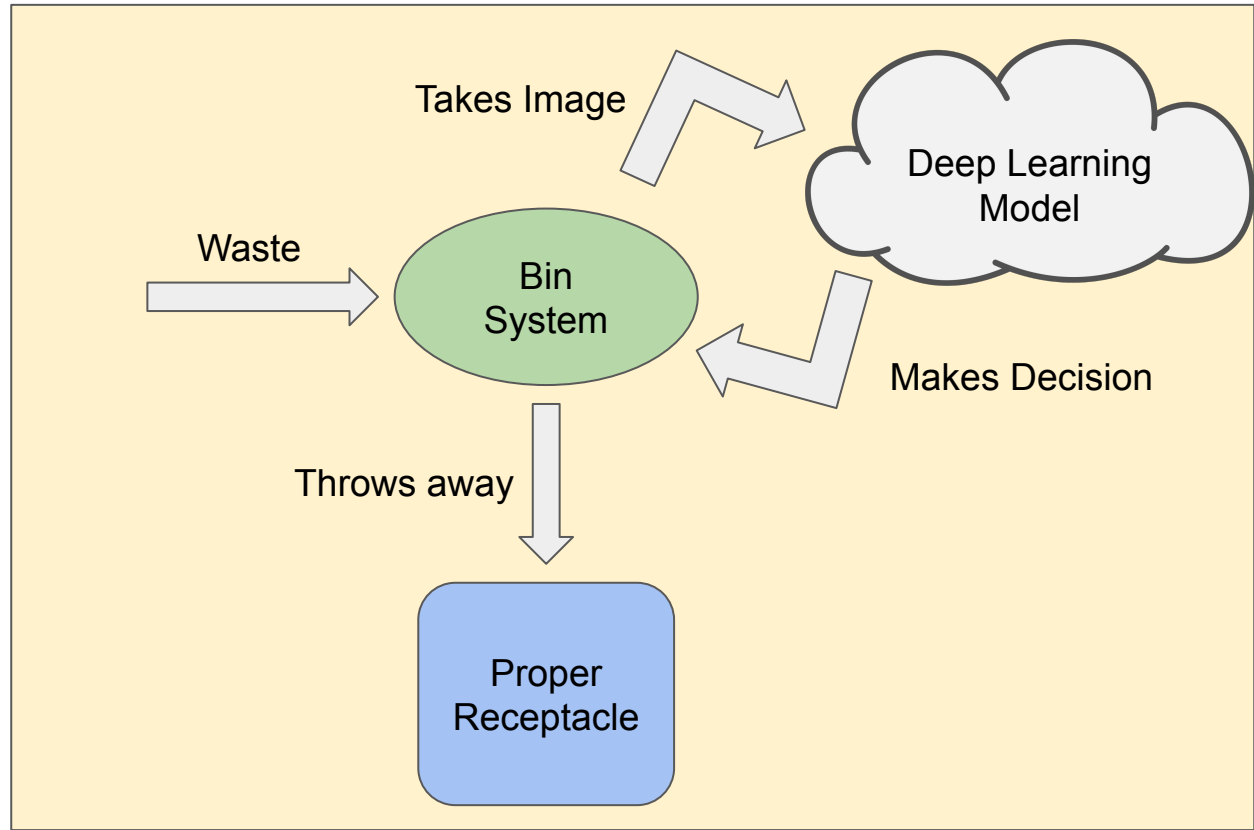

Case 1: Recycling

Case 2: Trash

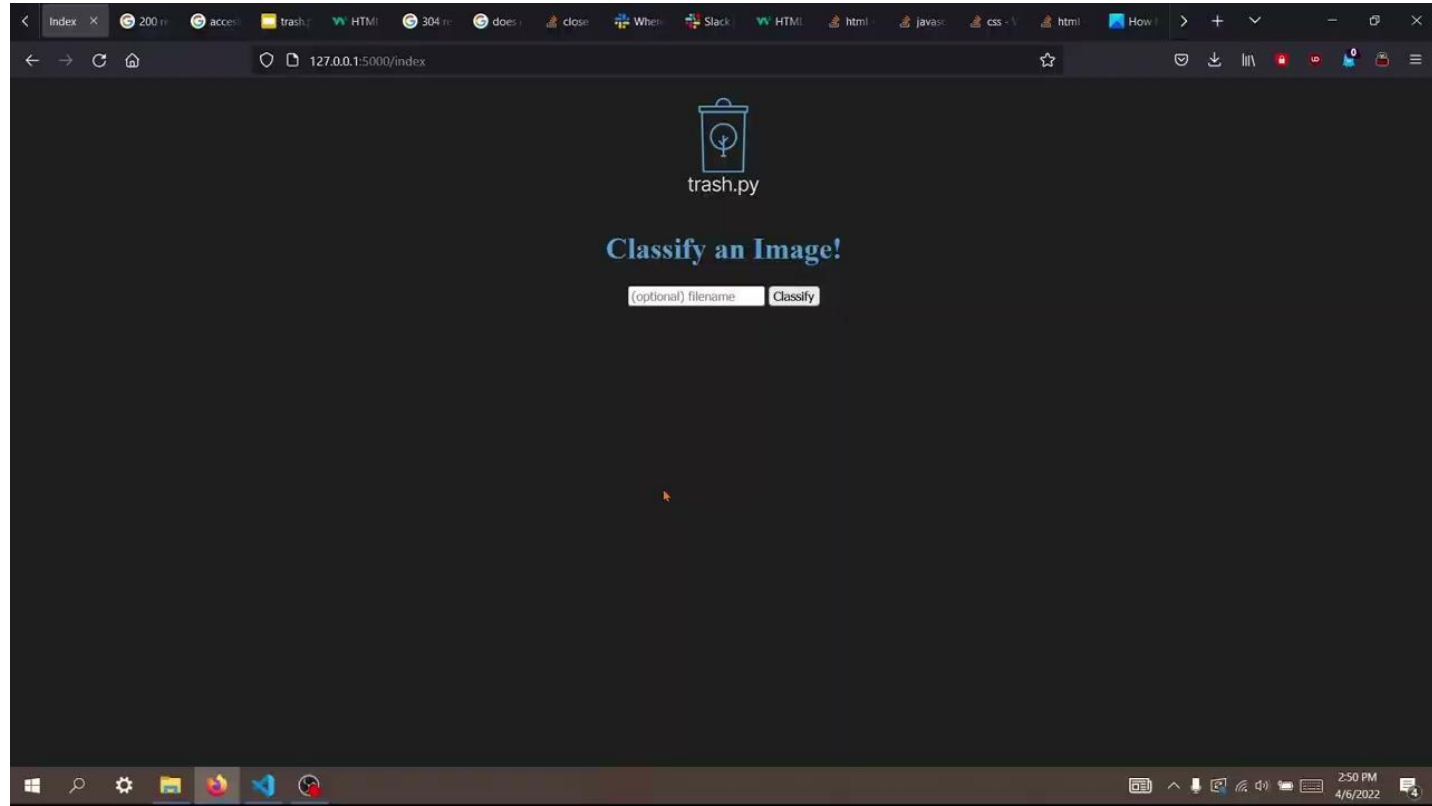

System Map

Lo-fi Prototype

System Demonstration

The Data Set

- TrashNet Dataset
- Similar problem to ours
- Close images on white background
- Many recycling categories, only one trash category
- Results in class-imbalance

Challenges of Class-Imbalanced Data

Class-Imbalance

Trash Images
5.4%

Recycling Images
94.6%

The model can cheat!

Solution: Create copies of trash data to increase percentage

Pros: Better distribution, more data

Cons: Much longer training time

The Solution: Features

The Solution: Features

LED lights on corner of bin

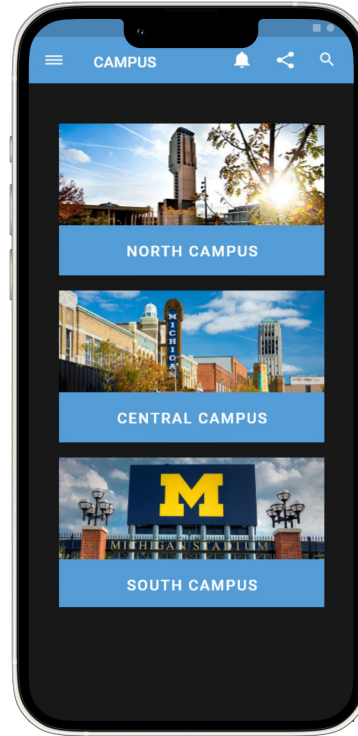

- Green: Working properly
- Orange: Full bin
- Red: Not working / need Maintenance

Weight Sensor:

Detects when respective bin is full

The Solution: Features

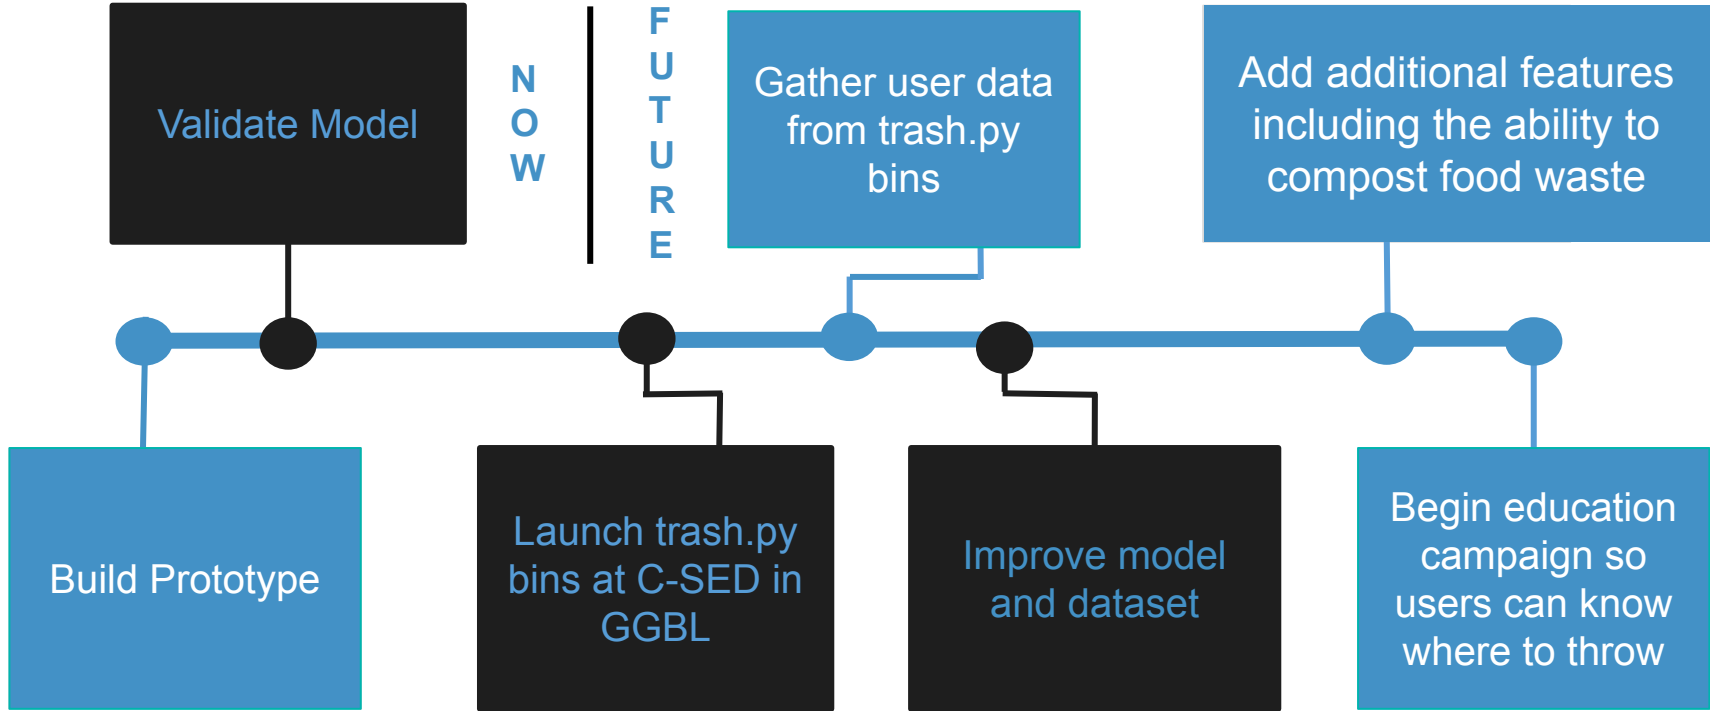

The Solution: Features

Current Market

				
Reduced Contamination				
Reduced Decisions				
Small Physical Footprint				
Easy adoption for UofM				

Project Timeline

Thank You

Key sustainability drivers

Reducing lost
recyclables

Improving user's
experience

Reduce MRF
strain

Key Partnerships

trash.py

Classifying Image

Classification: Trash

Confidence:

Trash: 89.43%

Recycling: 10.57%

Classifying Image

Classification: Recycling

Confidence:

Trash: 5.51%

Recycling: 94.49%

Future Ideas

- Compost
- Education
- Game
- Expansion outside university

Value Proposition

Reduce Waste

Build positive
environmental
impact
