Deliverables

M-Planner Figma Model
The final deliverable of this project was a figma model, created in accordance with the rest of the deliverables below. It ties in much of the grievances and advice of the interviewed student population, while also remaining faithful to the style of other Michigan-based websites, such as Wolverine Access.

M-Planner FigJam
This deliverable serves as a guide for the creation of the final product. It has many of the initial ideas, as well as some that were updated along the way. Additionally, it shows how they were meant to connect, making the creation of the Figma model easier in the long run.

M-Planner Project Proposal
This proposal takes the data and findings from the user interviews and forms them, as well as my own personal ideas, into a proposal for the shape of the eventual prototype. This document served as a guide for the creation of future deliverables and demarcated where discovery started to end and creation began.

User Interview Findings
In this document, the raw data from the user interview surveys was extrapolated to the problem that I had ideated.

User Interview Responses
This Google Sheet houses all responses to the initial survey that potential users answered.

User Interview Survey
This deliverable was the survey provided to those who might be affected by the given problem statement.
References
My major reference for the entrepreneurship aspect of this project was the knowledge gained from
Entrepreneurship 430, presented Fall 2022 by Adjunct Lecturer Grace Hsia Haberl. Nothing was quoted
directly from her class, but many of the ideas spring from her teaching.

Additionally, many of the images in both my poster and the deliverable came from stock image sites
including:

- PNG Tree
