Appendix S1

List of Supporting Items

- Table S1: Design overview (schematic, colored)
- Table S2: Summary of insect orders and guilds, including information regarding specialized ID literature, guild assignment
- Table S3: Hyp1 Results for predators, “others” and larval chewers
- Table S4: Hyp2 Results for predators, “others” and larval chewers
- Table S5: Phylogenetic distances per tree genus
- Table S6: Summary for rare types of leaf damage
- Fig S1: Hyp1 and Hyp2 results for larval chewers
- References in Appendix S1

Table S1: Schematic overview of tree species mixtures in IDENT-Auclair and IDENT-Freiburg. Values in parentheses below species acronyms are the number of plots for each mixture (first number in Auclair + second number in Freiburg). At each site the experiment consists of four identical blocks (except for a few additional plots in Freiburg, indicated by *). The full design of IDENT-Freiburg also contains 216 plots with different fertilizer treatments and 24 unfertilized plots with 4-species mixtures, but these treatments only contain native species and were not included in the present study.

species richness:	1		2		6			
	EU	NA	EU	NA	EU-NA	EU-NA	EU-NA	
	ACPL (4+4)	ACSA (4+4)	ACPL-BEPE (4+4)	ACSA-BEPA (4+4)	ACPL-BEPA (4+4)	LADE-QURO (4+4)	ACSA-ACPL (4+1*) (4+4)	6 EU (4+4)
	BEPE (4+4)	BEPA (4+4)	ACPL-PIAB (4+4)	ACSA-PIGL (4+4)	ACPL-QURU (4+4)	LALA-PISY (4+5*)	LALA-BEPE (4+0) (4+4)	6 NA (4+4)
	LADE (4+4)	LALA (4+4)	BEPE-PISY (4+4)	BEPA-PIST (4+4)	ACSA-PIAB (4+4)	PIAB-PIGL (4+4)	PIGL-LADE (4+0) (4+4)	6 angio (4+4)
	PIAB (4+4)	PIGL (4+4)	BEPE-QURO (4+4)	BEPA-QURU (4+5*)	ACSA-QURO (4+5*)	PIAB-PIST (4+4)	PIGL-PIST (4+0) (4+4)	6 gymno (4+4)

	QURO (4+4)	QURU (4+4)	PIAB-PISY (4+4)	LALA-QURU (4+4)	LADE-LALA (4+4)	PIST-PISY (4+4)	QURO-QURU (4+0) (4+4)	EUangioNAgymno (4+4)
number of plots:	48 in Auclair +48 in Freiburg		120+100		24+24		192+172 = 364	

Species acronyms:

angio = Angiosperms: ACPL = *Acer platanoides* L., ACSA = *A. saccharum* Marshall, BEPE = *Betula pendula* Roth, BEPA = *B. papyrifera* Marshall, QURO = *Quercus robur* L., QURU = *Q. rubra* L.

gymno = Gymnosperms: LADE = *Larix decidua* Mill., LALA = *L. laricina* (Du Roi) K. Koch, PIAB = *Picea abies* (L.) H. Karst., PIGL = *P. glauca* (Moench) Voss [in Freiburg, *Picea pungens* var. *glauca* Engelm. was erroneously supplied by the nursery and thus planted instead], PISY = *Pinus sylvestris* L. and PIST = *P. strobus* L.

EU = European species, NA = North American species

Table S2: Arthropod abundance per arthropod taxon (order, plus relevant sub-taxa) and site

Taxon ^{1,2}	Auclair	Freiburg	feeding guild
Arachnida	394	1006	
- Araneae	337	613	predator
- Acari	43	366	other
- Opiliones	14	26	predator
Coleoptera	826	697	
- Curculionidae	701	165	herbivore (adult leaf-chewer)
- Chrysomelidae	-	42	herbivore (adult leaf-chewer)
- Coccinellidae	3	72	predator
- Latridiidae	74	249	other
Dermaptera	-	44	Predator
Diptera	203	399	other
Hemiptera	603	6482	
- Auchenorrhyncha	37	371	herbivore (sap-sucker)
- Heteroptera	43	858	
○	24	397	herbivore (sap-sucker)
○	13	17	predator
- Sternorrhyncha	516	5244	herbivore (sap-sucker)
Hymenoptera	172	444	
- Symphyta (larvae)	1	3	herbivore (larval leaf-chewer)
- (all others)	171	431	other
Lepidoptera	123	106	
- (larvae) ³	114	88	herbivore (larval leaf-chewer)
Neuroptera	12	18	predator
Orthoptera ⁴	-	22	other
(other arthropod orders)	157	1536	other
total arthropod abundance	2490	10754	

¹The following literature and online resources were used for identification and guild assignments: Biedermann and Niedringhaus (2004), Bright and Bouchard (2008), Hassler and Rheinheimer (2010), Schaefer (2009), <http://www.aphidsonworldsplants.info>, <http://coleonet.de/>, among others (various field guides).

²In addition, selected specimens were identified using DNA-Barcoding, based on matching COI-barcode sequences to BOLD (<http://www.boldsystems.org/>) and other databases (contract work by AIM - Advanced Identification Methods GmbH, Leipzig, Germany).

³most common species was *Coleophora laricella*, a European species also introduced to Canada

⁴The few orthopterans found here contained at least some carnivorous species (*Meconema* sp.) and were thus not included in the herbivore guild

Table S3: Hypothesis 1 results for predators, “others” and larval chewers

predictor	model predator abundance			"others" abundance			larval chewer abundance		
	df	Chisq	<i>p</i>	df	Chisq	<i>p</i>	df	Chisq	<i>p</i>
(Intercept)	1	45.75	< 0.001	1	18.82	< 0.001	1	32.90	< 0.001
site	1	1.19	0.274	1	44.82	< 0.001	1	0.21	0.644

status exotic * log(SR)	0.18	0.11	1.64	0.100	0.04	0.14	0.30	0.763	0.13	0.35	0.38	0.702

Table S5: Intrageneric phylogenetic distance (PD) based on a dated phylogenetic tree for all tree species in IDENT (Christophe 2020). Due to a planting error in Freiburg, intrageneric PD for *Picea* differs between sites. For reference: the phylogenetic distance between angiosperms and gymnosperms has a value of 650.

genus	intrageneric PD (Auclair)	intrageneric PD (Freiburg)
<i>Acer</i>	18	18
<i>Betula</i>	35	35
<i>Quercus</i>	31	31
<i>Larix</i>	35	35
<i>Picea</i>	113	88
<i>Pinus</i>	72	72

Table S6: Number of leaves with rare and likely specialized leaf damage classes. Tree species exotic at a given site are marked in grey

genus	Auclair			Freiburg		
	Miners	Gallers	Rollers	Miners	Gallers	Rollers
<i>Acer platanoides</i>				24		2
<i>A. saccharum</i>					5	1
<i>Betula pendula</i>						
<i>B. papyrifera</i>						
<i>Quercus robur</i>				5	11	3
<i>Q. rubra</i>	3					
<i>Larix decidua</i>						
<i>L. laricina</i>						
<i>Picea abies</i>					5	
<i>P. glauca*</i>						
<i>Pinus sylvestris</i>						
<i>P. strobus</i>						

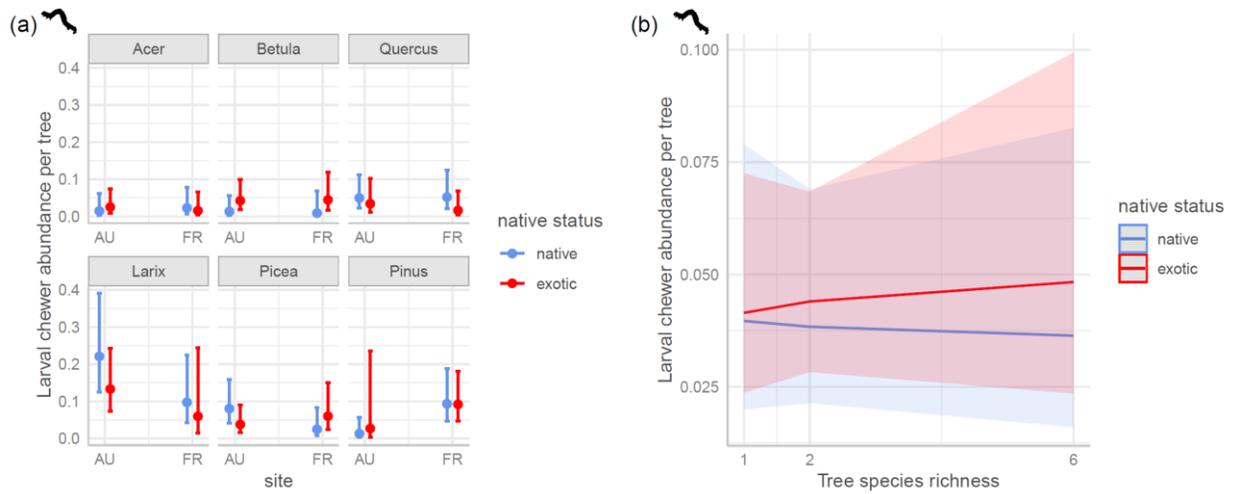

Figure S1: results for herbivore guild “larval leaf chewers”. Marginal effect plots are shown. a) is based on the “Hypothesis 1 model structure” and equivalent to Fig. 1 in the main text. b) is based on the “Hypothesis 2 model structure” and equivalent to Fig. 3 in the main text. 74
