

## **PREFACE**

This volume contains papers presented at the Fourth International Conference on Modulated Semiconductor Structures which was held at The University of Michigan in Ann Arbor, USA, July 17–21, 1989. The conference was attended by over 200 participants from 20 countries. The theme of focus was quantum heterostructures with a coverage of both materials and physics, in common with the earlier conferences held in Montpellier, France in 1987, Kyoto, Japan in 1985, and in Pasadena, USA in 1982.

We are grateful to our sponsors whose financial support made this conference possible, and to the members of the Organizing Committee, Program Committee and International Advisory Committee for their support and advice. The names of the sponsors and committee members are listed on the following pages.

Finally, we would like to express our special thanks to the staff of The University of Michigan Extension Service, Department of Conferences and Institutes, in particular, Ruth Curtis, David Frankel and Glenda Radine. Their professional dedication made the conference both efficient and pleasant.
