

*INOCERAMUS COBBANI*, NEW NAME FOR *INOCERAMUS RADIATUS*  
KELLUM, 1962

LEWIS B. KELLUM

Museum of Paleontology, University of Michigan, Ann Arbor, Mich.

*Inoceramus radiatus* Kellum 1962 (p. 57, pl. III, fig. 17) is a junior homonym, being preoccupied by *I. radiatus* Heine 1929 (p. 105, pl. 18, figs. 68, 69). This was called to the writer's attention by Dr. W. A. Cobban, Paleontology and Stratigraphy Branch, U. S. Geological Survey, Denver Laboratory, Denver, Colorado. A new name *I. cobbani* Kellum is therefore proposed for *I. radiatus* Kellum 1962. The species occurs in the late Upper Cretaceous Fox Hills formation of eastern Wyoming.
