What is "Drum Stick"?

"Drum Stick", the prototype of our first iPhone OS application, turns the iPhone into a... drum stick.

The user assigns three rhythm sounds to three gestures: left, up, and down. Make a sequence of gestures to perform a rhythm.

By playing with friends, users expand beyond the auditory range of a traditional drum kit with natural and electronic sounds.

Gestures: X-Axis

① Gesture left: Sound plays in slot 1.

② Gesture right: Sound plays in slot 3.

Gestures: Y-Axis

① Gesture down: Sound plays in slot 2.

Feedback

① Visual

② Haptic

③ Audio
