This dissertation project would not have been possible without the support and guidance from numerous friends, family members and mentors. First and foremost, I would like to thank my advisor and committee chair, Arline Geronimus, who has been a constant source of inspiration and encouragement throughout my graduate career. I thank Arline for her patient and thoughtful guidance throughout the conceptualization and completion of this dissertation project. I am also incredibly grateful for having had the opportunity to work with Arline on other projects, experiences that were instrumental to my methodological and theoretical training. I would also like to thank other members of my committee who each supported this project in a unique way. Mary Corcoran's vast expertise in the field of social-welfare policy has been a tremendous asset to this dissertation. I am grateful for having had the opportunity to participate in her seminar on poverty which provided important background for this project. I also thank Mary for her astute advice that contributed to the development of my second dissertation paper. I thank Sandro Galea for generously finding time to meet with me repeatedly during the early stages of this project. His key methodological insight has pushed me to strengthen and clarify my empirical arguments in important ways. Finally, I am incredibly grateful to Mark Padilla for encouraging me to pursue the qualitative portion of this dissertation and for providing methodological and theoretical guidance that were instrumental to this

endeavor. I also thank Mark for his enthusiastic support which has been invaluable over the last few years.

I am very grateful to have had the opportunity to be affiliated with University of Michigan's Population Studies Center (PSC), an interdisciplinary community that has provided a tremendous amount of support and assistance throughout my time at Michigan. In particular, I would like to thank Lisa Nidert who *very* patiently showed me the ropes of programming and data analysis when I first arrived at PSC and continues to provide an open door and an open ear for questions. I thank professor Rachel Snow for all of the advice, encouragement and mind-clearing cross-country ski workouts that played an important role in helping me get through the dissertation process. Thanks to David Harding for volunteering his time for this dissertation defense and for agreeing to serve as a mentor during the next phase of my research career. I would also like to thank my fabulous office-mate Annie Ro for our very productive "work meetings" and many engaging office conversations. Thank you to fellow PSC students, Maggie, Lisa, Erin, Kristen, Jay, and Ben for so many words of wisdom and for making bay 2080 such an enjoyable place to spend inordinate amounts of time. Special thanks to PSC alum Cindy Colen who has continued to provide valuable support and guidance from a distance. Finally, I thank the Population Studies Center's Eva Mueller Fund for funding the qualitative portion of this dissertation project.

I am grateful to many other individuals and organizations on the University of Michigan Campus. In particular, thank you to several faculty and students in the department of Health Behavior and Health Education for supporting my public health education in so many ways. Thank you to the Center for Statistical Consulting and, in

particular, Brady West for superb statistical support. I also thank the Center for Educating Women and Rackham Graduate School for providing additional funding for this dissertation project.

I would like to thank many people in Iowa who made the qualitative portion of my dissertation possible. At University of Iowa, thanks to Salome Raheim for her important insights and encouraging support. I also thank Steven Rackis for graciously, sharing his thoughts and taking the time to introduce me to many key individuals when I first arrived in Iowa. Special thanks to Tara Shochet and Loren Glass for welcoming me into their home. Thank you to Karen Cantonwine for providing the original seed of an idea that led to this research endeavor. Finally, and most importantly, thank you to the men and women whose stories and experiences define this project.

I was fortunate to have tremendous support from many friends and family members throughout my graduate studies and there is not enough space here to name them all. I am particularly grateful to my colleague Rahwa Haile who began the doctoral program with me and has been a constant source of intellectual and moral support. Thank you to Tim Connallon and Akane Uesugi for all of the good times (and of course good eats) at the “Chapin St Commune”. I will be forever grateful to David Cantonwine who has done so much to support me in reaching my goals and is always there to offer encouragement and a fresh perspective. I offer many thanks to the entire Atkins- Crockin-Gottlieb-Shapiro clan for all of your love and support. Finally, to my family, Art, Maura, Alex and Eli, I couldn't have done it without you.

Table of Contents
