N 536 - Utilization of Nursing Research in Advanced Practice, Summer 2008

Tzeng, Huey-Ming

http://hdl.handle.net/2027.42/64943
Design Characteristics

- Maximizes control over factors to increase the validity of the findings
- Guides the researcher in planning and implementing a study
Level of Control: Quantitative Research

- Descriptive
- Correlational
- Quasi-experimental
- Experimental

Increased Control with Design
Concepts Relevant to Research Design (1)

**Causality**

A
Pressure

B
Ulcer

**Multicausality**

Years smoking

High fat diet

Limited exercise

Heart disease
Concepts Relevant to Research Design (2)

- Probability: Likelihood of an outcome
- Bias: Slanting findings
- Manipulation: Treatment
- Control: All phases of design
Design Validity

- Measure of accuracy of a study

- Examined with critique of the following dimensions:
  - Statistical conclusion validity
  - Internal validity
  - Construct validity
  - External validity
Elements of a Strong Research Design (1)

- Controlling the environment of the study setting

- Levels of controlling:
  - Natural setting
  - Partially controlled setting: e.g., clinics
  - Highly controlled setting: e.g., laboratory
Elements of a Strong Research Design (2)

- Controlling the equivalence of subjects and groups
  - Random subject selection
  - Random assignment to groups
Elements of a Strong Research Design (3)

- Controlling the treatment
  - Choose a treatment based on research and practice
  - Develop a protocol for implementation
  - Document the implemented treatment
  - Use a check-list to determine the extent of completeness to which the treatment was implemented
  - Evaluate the treatment during the study
Elements of a Strong Research Design (4)

- Controlling measurement
  - Reliability
  - Validity
  - Number of measurement methods
  - Types of instruments
Elements of a Strong Research Design (5)

- Controlling extraneous variables
  - Identify and eliminate extraneous variables via sample criteria, choice of settings, or research design
  - Random sampling
  - Sample: Heterogenous, homogeneous, or matching
  - Statistical control
Problems with Study Designs

- Inappropriate for the study purpose or the research framework
- Poorly developed designs
- The research methods were poorly implemented
- Inadequate treatment, sample, or measurement methods
Selecting a Design

Is there a treatment?

Yes

Is the treatment tightly controlled by the researcher?

Yes

Will a randomly assigned control group be used?

Yes

Is the original sample randomly selected?

Yes

Experimental Study

No

Correlational Design

No

Descriptive Design

No

Will the sample be studied as a single group?

Yes

Quasi-Experimental Study

No

Research Design
Selecting a Descriptive Design

Examining sequences across time?

- No
  - One Group?
    - Yes
      - Following same subjects across time?
        - Yes
          - Single unit of study
            - Case Study
        - No
          - Studying events partitioned across time?
            - Yes
              - Longitudinal Study
            - No
              - Trend Analysis
    - No
      - Cross-sectional design
        - Yes
          - Repeated measures of each subject
            - Yes
              - Cross-sectional design with treatment partitioning
            - No
              - Longitudinal design with treatment partitioning

- Yes
  - Descriptive Design
    - Data collected across time
      - Yes
        - Cross-sectional design with treatment partitioning
      - No
        - Longitudinal design with treatment partitioning
A Typical Descriptive Design

Clarification ➔ Measurement ➔ Description ➔ Interpretation

Phenomenon of Interest

Variable 1 ➔ Description of Variable 1
Variable 2 ➔ Description of Variable 2
Variable 3 ➔ Description of Variable 3
Variable 4 ➔ Description of Variable 4

Interpretation of Meaning ➔ Development of Hypotheses
A Comparative Descriptive Design

Group I
{variables measured}

Describe

Comparison of Groups on Selected Variables

Interpretation of Meaning

Development of Hypotheses

Group II
{variables measured}

Describe
Selecting the Type of Correlational Design

- **Describe relationships between/among variables?**
  - Descriptive correlational design

- **Predict relationships between/among variables?**
  - Predictive correlational design

- **Test theoretically proposed Relationships?**
  - Model testing design
A Descriptive Correlational Design

**Measurement**

- Research Variable 1
  - Description of variable
  - Examination of Relationship
  - Interpretation of Meaning

- Research Variable 2
  - Description of variable
  - Development of Hypotheses

Research Design
A Predictive Design

Value of Intercept + Value of Independent Variable 1 + Value of Independent Variable 2 = Predicted Value of Dependent Variable
Selecting The Type of Quasi-Experimental Design

```
Control Group?
  No
  Pretest?
  No
  One-group post-test only design
  Yes
  Pretest?
  No
  Comparison with population values?
  Yes
  Repeated Measures?
  No
  Strategy for Comparison
  Yes
  Suggest reevaluating design
  No
  Compare treatment & control conditions?
  Yes
  One group pretest/post-test design
```
Selecting The Type of Experimental Design

- **Pretest**
  - No
    - Post-test only control group design
  - Yes
    - Repeated Measurements?
      - No
        - Examine effects of confounding variables?
          - No
            - Multiple sites?
              - Pretest/post-test control group design
          - Yes
            - Blocking?
              - No
                - Randomized clinical trials
              - Yes
                - Comparison of multiple levels of treatment
                  - No
                    - Examination of complex relationships among variables in relation to treatment
                  - Yes
                    - Nested Designs

Pretest-Post Test, Control Group Designs

<table>
<thead>
<tr>
<th></th>
<th>Measurement of dependent variables</th>
<th>Manipulation of independent variables</th>
<th>Measurement of dependent variables</th>
</tr>
</thead>
<tbody>
<tr>
<td>Randomly selected</td>
<td>PRETEST</td>
<td>TREATMENT</td>
<td>POST-TEST</td>
</tr>
<tr>
<td>experimental</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>group</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Randomly selected</td>
<td>PRETEST</td>
<td></td>
<td>POST-TEST</td>
</tr>
<tr>
<td>control group</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Treatment:** Under control of researcher

**Findings:**
- Comparison of pretest and post-test scores
- Comparison of experimental and control groups
- Comparison of pretest-post-test differences between samples

**Example:** Your self (1990). The impact of group reminiscence counseling on a depressed elderly population.

**Uncontrolled threats to validity:**
- Testing
- Mortality

**Instrumentation:** Restricted generalizability as control increases
## Post-Test-Only Control Group Design

<table>
<thead>
<tr>
<th></th>
<th>Measurement of independent variables</th>
<th>Measurement of dependent variables</th>
</tr>
</thead>
<tbody>
<tr>
<td>TREATMENT</td>
<td>Randomly selected experimental group</td>
<td>POST-TEST</td>
</tr>
<tr>
<td>POST-TEST</td>
<td>Randomly selected control group</td>
<td>POST-TEST</td>
</tr>
</tbody>
</table>

- **Treatment**: Under control of researcher
- **Findings**: Comparison of experimental and control groups
- **Uncontrolled threats to validity**: Instrumentation, Mortality, Limited generalizability as control increases
## Nested Design

### Pain Control Management

<table>
<thead>
<tr>
<th></th>
<th>Primary Nursing Care</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Primary Care</strong></td>
<td>Unit A</td>
</tr>
<tr>
<td><strong>No Primary Care</strong></td>
<td></td>
</tr>
</tbody>
</table>

#### Traditional care
- Unit A
- Unit B
- Unit C
- Unit D

#### PRN Medication
- Unit E
- Unit F
- Unit G
- Unit H

#### New approach: “Around the clock” medication

**Research Design**
Advantages of Experimental Designs

- More controls in design and conducting a study
- Increased internally validity
  - Decreased threats to design validity
- Fewer rival hypotheses
Advantages of Quasi-Experimental Designs

- More practical
  - Ease of implementation

- More feasible
  - Resources, subjects, time, setting

- More generalizable
  - Comparable to practice
Developing the Design Section of Your Proposal

- Identify the design
  - Name it specifically

- Provide a map of the design
- Discuss your rationale for using this design
- Describe threats to the validity of the chosen design
