Research Design

Contributors
Sonia A. Duffy, PhD, RN
Lisa Kane Low, PhD, CNM, FACNM
Huey-Ming Tzeng, PhD, RN
Design Characteristics

- Maximizes control over factors to increase the validity of the findings
- Guides the researcher in planning and implementing a study
Level of Control: Quantitative Research

- Descriptive
- Correlational
- Quasi-experimental
- Experimental

Increased Control with Design
Concepts Relevant to Research Design (1)

**Causality**

- A: Pressure
- B: Ulcer

**Multicausality**

- Years smoking
- High fat diet
- Limited exercise
  - Heart disease
• Probability: Likelihood of an outcome
• Bias: Slanting findings
• Manipulation: Treatment
• Control: All phases of design
Design Validity

- Measure of accuracy of a study

- Examined with critique of the following dimensions:
  - Statistical conclusion validity
  - Internal validity
  - Construct validity
  - External validity
Elements of a Strong Research Design (1)

- Controlling the environment of the study setting

- Levels of controlling:
  - Natural setting
  - Partially controlled setting: e.g., clinics
  - Highly controlled setting: e.g., laboratory
Elements of a Strong Research Design (2)

- Controlling the equivalence of subjects and groups
  - Random subject selection
  - Random assignment to groups
Elements of a Strong Research Design (3)

- Controlling the treatment
  - Choose a treatment based on research and practice
  - Develop a protocol for implementation
  - Document the implemented treatment
  - Use a check-list to determine the extent of completeness to which the treatment was implemented
  - Evaluate the treatment during the study
Elements of a Strong Research Design (4)

- Controlling measurement
  - Reliability
  - Validity
  - Number of measurement methods
  - Types of instruments
Elements of a Strong Research Design (5)

- Controlling extraneous variables
  - Identify and eliminate extraneous variables via sample criteria, choice of settings, or research design
  - Random sampling
  - Sample: Heterogenous, homogeneous, or matching
  - Statistical control
Problems with Study Designs

- Inappropriate for the study purpose or the research framework
- Poorly developed designs
- The research methods were poorly implemented
- Inadequate treatment, sample, or measurement methods
Selecting a Design

Is there a treatment?
- No
- Yes
  Is the treatment tightly controlled by the researcher?
  - No
  - Yes
    Will a randomly assigned control group be used?
    - Yes
    - No
      Is the original sample randomly selected?
      - Yes
      - No

Is the primary purpose examination of relationships?
- No
- Yes
  Will the sample be studied as a single group?
  - No
  - Yes
    Correlational Design

Descriptive Design
Selecting a Descriptive Design

Examining sequences across time?
- No
  - One Group?
    - No
      - Comparative Descriptive Design
    - Yes
      - Descriptive Design

- Yes
  - Following same subjects across time?
    - No
      - Cross-sectional design
    - Yes
      - Data collected across time
        - No
          - Trend Analysis
        - Yes
          - Studying events partitioned across time?
            - No
              - Repeated measures of each subject
            - Yes
              - Longitudinal Study

- Single unit of study
  - No
    - Longitudinal design with treatment partitioning
  - Yes
    - Case Study
A Typical Descriptive Design

**Clarification** ➔ **Measurement** ➔ **Description** ➔ **Interpretation**

**Phenomenon of Interest**

- Variable 1
- Description of Variable 1

- Variable 2
- Description of Variable 2

- Variable 3
- Description of Variable 3

- Variable 4
- Description of Variable 4

**Interpretation of Meaning** ➔ **Development of Hypotheses**
A Comparative Descriptive Design

Group I
{variables measured}

Group II
{variables measured}

Describe

Comparison of Groups on Selected Variables

Interpretation of Meaning

Development of Hypotheses
Selecting the Type of Correlational Design

Describe relationships between/among variables?
- Descriptive correlational design

Predict relationships between/among variables?
- Predictive correlational design

Test theoretically proposed Relationships?
- Model testing design
A Descriptive Correlational Design

Measurement

Research Variable 1

Description of variable

Examination of Relationship

Interpretation of Meaning

Development of Hypotheses

Research Variable 2

Description of variable
A Predictive Design

Value of Intercept + Value of Independent Variable 1 + Value of Independent Variable 2 = Predicted Value of Dependent Variable
Selecting The Type of Quasi-Experimental Design

Control Group?

No

Pretest?

No

One-group post-test only design

Comparison with population values?

No

Repeated Measures?

No

Strategy for Comparison

No

Suggest Reevaluating design

Yes

Compare treatment & control conditions?

One group pretest/post-test design

Yes

Pretest?

No

Repeated Measures?
Selecting The Type of Experimental Design

Pretest

Yes

Repeated Measurements?

No
Examine effects of confounding variables?

No
Multiple sites?

Pretest/post-test control group design

No
Randomized clinical trials

No
Comparison of multiple levels of treatment

No
Examination of complex relationships among variables in relation to treatment

Yes
Blocking?

Yes
Repeated measures design

Yes
Randomized Block Design

Yes
Nested Designs
## Pretest-Post Test, Control Group Designs

<table>

Advantages of Experimental Designs

- More controls in design and conducting a study
- Increased internally validity
  - Decreased threats to design validity
- Fewer rival hypotheses
Advantages of Quasi-Experimental Designs

- More practical
  - Ease of implementation
- More feasible
  - Resources, subjects, time, setting
- More generalizable
  - Comparable to practice
Developing the Design Section of Your Proposal

- Identify the design
  - Name it specifically
- Provide a map of the design
- Discuss your rationale for using this design
- Describe threats to the validity of the chosen design
