Fig. S3 (a) Levels of 19S6b and 11S α regulatory subunits were unchanged in lumbar spinal cord of P45 and P75 SOD1G93A transgenic mice compared to their nontransgenic littermates (GLm). Shown are Western blots of data presented in Fig. 1 c,d). (b) There was no significant difference in levels of any subunit tested in extracts of thoracic spinal cord from SOD1G93A (shown are Western blots of data presented in Fig. 1 e,f).
