This work is dedicated to my children. You have made me stronger, better and more fulfilled than I could have ever imagined. I love you to the moon and back.
ACKNOWLEDGEMENTS

I am grateful to everyone who has helped me in my struggle to achieve my dream of becoming a Ph. D. I would first like to thank Caroline Gaither, who has given much time, effort and knowledge to aid in the completion of this dissertation. She has cultivated an appreciation for teaching and mentoring students by her example. Thank you for your patience and friendship. I would also like to think Rick Bagozzi, whose wisdom and experience was greatly appreciated. My sincere thanks to Trisha Wells for her assistance with the pilot test and patient recruitment phase and for her insight regarding patient attitudes and behaviors. I will miss the many conversations that I had with Nancy Lewis regarding her experiences with her patients, these stories helped to refine and direct my current stream of research. And lastly, I would like to thank Renee Anspach, whose class I took years ago sparked an interest in identity and who has graced the committee with her enthusiasm and expertise.

Many others have been instrumental in this process. I would like to acknowledge their role in the completion of my work. I appreciate the generous assistance of Dean Frank Ascione, who aided in the funding of this project and who has inspired me throughout my career at the University of Michigan. Without the financial support of the C.R. Walgreen III Fellowship and the Henry Arbour
Scholarship, the completion of this degree would not have been possible. The faculty and staff in the Social and Administrative Sciences department and the PICO group also deserve recognition: Suzan Kucukarslan, Lynn Phanuef, and Duane Kirking for the sharing of their knowledge and expertise, camaraderie and rapport.

Many thanks go to my fellow students Anita Ou, Alvin Wu, Hsien-Chang Lin, Jongwha Chang, Isha Patel, Alla Iaconi and Justin Gatwood, who have provided friendship and support, and with whom I have shared laughter, frustration and companionship. A special thank you to Daniel Lane, our friendship will not be forgotten long after we both graduate. The best of luck to you in all of your endeavors!

I cannot begin to express my gratitude to my family for all of the love, support, encouragement and prayers they have sent my way along this journey. To my parents, thank you for being my champions throughout the past 32 years. Your unconditional love and support has meant the world to me, I hope that I have made you proud. To my siblings, the rivalry between us has pushed me to succeed. I am so proud of all of your accomplishments and share in all of the joys in your lives. To my grandparents, thank you for believing in me and for all of your help with the boys when I needed it the most. To my boys, Sam and Caleb, you are my inspiration to achieve greatness. Without you, I would not be
where I am today. And to my Ryan, thank you for being there for me at the end of the day. Your love is what has gotten me through when I wanted to give up.

Finally, I am grateful to have had the privilege of attending the prestigious University of Michigan. This experience has afforded me the opportunity to work with some of the best and brightest, and the resources for me to achieve great success. Thank you for this opportunity.
# TABLE OF CONTENTS

Dedication ............................................................................................................. ii

Acknowledgements .............................................................................................. iii

List of Tables ....................................................................................................... xii

List of Figures ...................................................................................................... xv

List of Appendices .............................................................................................. xvi

Chapter

1. **INTRODUCTION**
   - Statement of the Problem ............................................................... 1
   - Nature of the Research Project ....................................................... 5
   - Theoretical Background ................................................................. 7
   - Components of Social Identity Theory ........................................ 12
   - Study Aims ................................................................................... 13
   - Significance ................................................................................... 13
   - Hypotheses ................................................................................... 15
   - Notes to Chapter 1 ........................................................................ 16

2. **LITERATURE REVIEW** .......................................................................... 22
   - Chapter Overview ......................................................................... 22
   - The Incidence of Diabetes ......................................................... 22
Explanation of and the relationships between key study constructs .......................................................... 27
Illness identity ...................................................................................................................................... 27
Illness representations and perspectives ......................................................................................... 28
Acceptance of diagnosis and the development of illness identity .............................................. 32
Social Identity ............................................................................................................................... 36
The relationship between illness identity and social identity .......... 39
Accepting chronic illness: implications for social identity .......... 44
Illness and its impact on social relationships with others .......... 48
Support Groups ................................................................................. 52
Online Support Groups ..................................................................... 60
Relationship between social identity and support groups .......... 70
Goal Setting and Achievement ...................................................... 73
Relationship between support group participation and goals ....... 78
Conclusion ....................................................................................... 87
Notes to Chapter 2 ........................................................................... 91

3. METHODS ........................................................................................ 101
Chapter Overview ........................................................................... 101
Selection of Methodological Approach ......................................... 101
Sample Size .................................................................................... 102
Sample Selection ............................................................................ 104
Inclusion ....................................................................................... 105
Exclusion ....................................................................................... 105
Data Collection ............................................................................. 106
Pilot study ..................................................................................... 106
Pretest ........................................................................................... 108
Description of the Online Survey .............................................. 109
Measures ....................................................................................... 109
Questions for Demographic and Diabetes Information .............. 110
Illness Identity variables .............................................................. 111
Social Identity variables ................................................................. 113
Goal related variables in the study ............................................. 115
Support group identity and participation variables .................. 117
Diabetes Control and Friends and Family Support ......................... 168
Diabetes-related Emotions .......................................................... 169
Diabetes Impact on Life .............................................................. 170
Diabetes assistance and impact on relationships ......................... 171
Social Identity ............................................................................. 172
Self-esteem ............................................................................... 173
Work-life Balance ...................................................................... 174
Goal Behavior ............................................................................. 175
Evaluation of Measures ............................................................... 177
Cronbach’s \( \alpha \) ....................................................................... 177
Exploratory Factor Analysis ....................................................... 180
Confirmatory Factor Analysis .................................................... 182
Structural Models ....................................................................... 189
Hypothesis Testing ..................................................................... 191
Non-Support Group Users .......................................................... 194
Support group members ............................................................. 214
5. DISCUSSION OF RESULTS ....................................................... 217

Chapter Overview ................................................................. 217
Introduction ............................................................................. 217
Hypotheses ............................................................................... 218
Discussion of the Demographic Results ...................................... 221
Comparisons between the study groups on main study variables ........................................... 228
Diabetes variables ..................................................................... 228
Diabetes Control and Family and Friend Support ...................... 230
Goal behaviors .......................................................................... 232
Testing Aim 1 ............................................................................. 233
Testing Aim 2 ............................................................................. 241
Testing Aim 3 ........................................................................................................... 242
Testing Aim 4 ........................................................................................................... 244
Notes to Chapter 5 ................................................................................................. 250
6. CONCLUSIONS ................................................................................................. 252
Chapter Overview ................................................................................................. 252
Summary of Study Aims ......................................................................................... 253
Aim 1 ....................................................................................................................... 253
Aim 2 ....................................................................................................................... 255
Aim 3 ....................................................................................................................... 255
Aim 4 ....................................................................................................................... 256
Implications of the Results for Health Care Delivery ................................ 257
Implications of the results on the use of Social identity theory .... 259
Study Limitations ..................................................................................................... 261
Future Studies .......................................................................................................... 265
Conclusions .............................................................................................................. 267
Notes to Chapter 6 ................................................................................................... 269
Appendices .............................................................................................................. 270
Bibliography ............................................................................................................ 300
LIST OF TABLES

Table 3.1: Description of Demographic and Diabetes variables in study .......... 111
Table 3.2: Illness and Social Identity related variables in study ......................... 115
