STRUCTURAL AND FUNCTIONAL CORRELATIONS OF THE THYROID HORMONE RECEPTOR

by

Yi Chen

A dissertation submitted in partial fulfillment
of the requirements for the degree of
Doctor of Philosophy
(Biophysics)
in The University of Michigan
2010

Doctoral Committee:

Assistant Professor Matthew A. Young, Chair
Professor Gordon M. Crippen
Professor Ronald J. Koenig
Professor Richard R. Neubig
Associate Professor Zhaohui Xu

ACKNOWLEDGEMENTS

The task of writing this dissertation and performing the research could not been accomplished without several people and organizations to whom I owe a debt of gratitude. First I would like to thank Professor Young for his mentoring and support. Professor Young have taught me many important things in the scientific research – from experimental and computation techniques to critical thinking, academic writing, and scientific presentation. Additionally, I would like to thank the current and former members of the Young group: Annie Bao, Douglas Jacobson, Cherisse Loucks, Owen Darr, and Jeremiah Nummela, for their many wonderful scientific (and non-scientific) conversations, their help and their support. Additional thanks go to my committee members, Professor Ronald Koenig, Professors Gordon Crippen, Professor Richard Neubig, and Professor Zhaohui Xu, for their patience, assistance, encouragement, and scientific insights. The departments of Biophysics, Biological Chemistry and Bioinformatics have all been very supportive during my Ph.D. study here. I would like to thank my family members and friends for their support. And I would also extend an additional thank you to Patricia Gold for her help during the writing of this work.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS ii

LIST OF FIGURES vi

CHAPTER

I. Introduction 1

1.1 Biological Background 1

1.1.1 Thyroid hormones function and diseases 1

1.1.2 Thyroid hormone synthesis 3

1.1.3 Thyroid hormone receptors: isoforms, domain organization 5

1.1.4 Functional domains 8

1.1.5 Molecular Mechanism of thyroid hormone receptor action 12

1.2 Experimental and Computational Techniques 15

1.2.1 Fluorescence anisotropy 15

1.2.2 Homology modeling 16

1.2.3 Molecular dynamics 17

1.2.3 Free energy calculation 18

1.3 Specific Aims 20

II. Structure of the Thyroid Hormone Receptor DNA Binding Domain on the Inverted Palindrome Response Elements 34

2.1 Abstract 34

2.2 Introduction 35

2.3 Results 39

2.3.1 Overall architecture 39

2.3.2 The homodimer TR DBD assembly on F2 TRE 43
2.3.3 Recognition of the DNA sequence 48
2.3.4 Conformation flexibility of the CTE helix 51
2.3.5 Affinity and stoichiometry of the F2 TRE binding 55
2.4 Discussion 62
2.5 Methods 67
2.5.1 Protein and DNA Purification 67
2.5.2 Crystallization and Data Collection 68
2.5.3 Structure Determination 69
2.5.4 Native Gel-shift Assay 70
2.5.5 Fluorescence Anisotropy Assay..... 71

III. Structural Characteristics of the Thyroid Hormone Receptor Ligand Binding Domain in the Ligand-free state 80
3.1 Abstract 80
3.2 Introduction 81
3.3 Results 86
3.3.1 Overall structures 86
3.3.2 Stability Analysis of the *apo* LBD models 90
3.3.3 Clustering of *apo* TR LBD model structures 93
3.3.4 Regional fluctuations and dynamics 95
3.4 Discussion 99
3.5 Methods 101
3.5.1 Deriving *apo* TR homology models 101
3.5.2 Molecular dynamics simulation 102
3.5.3 Free energy calculation 102

IV. Corepressor Recruitment by the Thyroid Hormone Receptor Ligand Binding Domain 107
4.1 Abstract 107
4.2 Introduction 108

4.3 Results 114
4.3.1 Corepressor binding to TR LBD 114
4.3.2 Computational homology model of corepressor binding 118
4.3.3 Corepressor binding interface 121
4.3.4 Characterization of the distinct nuclear receptor interaction domains 127
4.3.5 Corepressor induced conformational alterations 132
4.3.6 Ligand induced effect on corepressor binding 133
4.4 Discussion 136
4.5 Methods 138
4.5.1 Protein expression and purification 138
4.5.2 Homology modeling 139
4.5.3 Molecular dynamics simulations 140

V. Conclusions and Perspectives 146

LIST OF FIGURES

Figure

1.1 Chemical structure of thyroid hormones and domain organizations of the TR isoforms 4

1.2 Molecular mechanism diagram of nuclear receptor function 13

2.1 Three types of TRE and schematic diagram of the TR DBD construct 40

2.2 Overall structure of the TR DBD homodimer on the F2 TRE, and summary diagram of the protein-DNA interactions 42

2.3 Electron density map of different regions in the TR DBD - F2 TRE complex, zoomed-in view of TR DBD and DNA half-site interactions, and molecule packing in the crystal 47

2.4 CTE helix displacement and zoomed-in view of the T-box region 50

2.5 Native gel shift assays of the wild-type TR DBD with different TREs and mutant TR DBD with F2 TRE, and intensity quantification chart 54

2.6 Structure models of the TR DBD homodimer with various TREs 57

2.7 Fluorescence anisotropy measurements 60

2.8 Model of TR DBD-LBD homodimer on an F2 TRE 65

3.1 Crystal structures of *apo* PPAR and *apo* RXR in dimeric and tetrameric states 84

3.2 Sequence alignments of TR, RXR, and PPAR; T3-bound TR LBD and *apo* TR LBD homology models 88

3.3 2-dimensional rmsd map of *apo* TR LBD homology models, and free energy calculation for both homology models 92

3.4 Representative structures of clusters of two homology model trajectories and the percentage of occurrence of each cluster 94

3.5 B-factor plot of *apo* TR LBD models 97

3.6 Regional rmsd charts of two homology model trajectories 98

4.1 Schematic diagrams of domain organizations of NR corepressors, and amino acid sequences of the NR interaction boxes of the coactivator protein SRC-1 and corepressor proteins 110

4. 2 Co-expression and purification of the TR LBD-NCoRsh complex 115

4. 3 Crystal structures of the TR LBD-coactivator complex, a homology model of TR LBD-SMRT S2 complex, and T3-bound TR LBD 117

4. 4 Overlay of three homology models of TR LBD-SMRT S2 peptide models generated by different alignment protocols, and rmsd plot of simulations on each model 119

4. 5 Three homology models of TR LBD-NCoR peptide complexes, and zoomed-in views at the binding interfaces 122

4.6 Rmsd plot of TR LBD-NCoR peptide homology models, and representative structures of clusters generated from three homology model trajectories of TR LBD-NCoR peptide complexes 124

4.7 Alignments of amino acid sequences of NR interaction boxes of NCoR and SMRT in different organisms, and conservation of each residue 126

4.8 Distances between corepressor peptides and TR LBD and the distribution of the values 128

4.9 B-factor plot of TR LBD-NCoR peptide complex models and b-factor plot of *apo* TR LBD-NCoR N2 and *holo* TR LBD-NCoR N2 131

4.10 Representative structures of clusters of the homology model trajectories of *apo* TR LBD-NCoR N2 and *holo* TR LBD-NCoR N2, and distances between corepressor peptides and TR LBD 134
