Cyberculture(?)

Themes & Topics...

Should we still talk about this?

Is it something different anymore, or is it part of “everyday life”?

Is “cyberculture” now a meaningless term, now that everything “interpenetrates”?

New forms of sociability

A replacement of the “one to many” content model by a “many to many”?

A new “cyborg body”?

Interpenetration

Technical side

OS & TCP/IP interoperability: almost done, thanks to XML and widely-adopted proprietary standards

Cross-system more difficult

PCs, cell phones, PDAs, cameras, watches, embedded systems?

Cross-System Issues

Far different genealogies and business models

Windows, Mac, and Linux were hard enough...

Cell phones on an “old,” lock-in subscription model—“pay to get to another system”

Example: phone photos to a PC?

Bluetooth?—please!

Elusive “Convergence”

The fictions of “plug-and-play”

Some are OK: USB2, PCI, ATA, etc.,
thanks to standards committees

DRM protections prevent movement of
content and time / space shifting

Overreaching: how many people want X10
to control their shower from their PC?

“Ubiquity”? So What?

Defined (in theory): everything
interconnects, everywhere, wirelessly

How? WiFi... Bluetooth... GSM... G3...
Java... AJAX... [perl... python...]

How to get integration across TCP/IP,
POTS, and mobiles—SIP isn't enough

WiFi, voice-over-IP (VoIP) and the promise
of disintermediating all conversation?

Disintermediation... Ever?!

Cell phones without towers or providers:
“meshing” [a cousin to “mashing”?]

Municipal WiFi and the politics of connectivity

Lock-ins prevent freedom and flexibility

political lock-ins

content lock-ins: recording contracts, etc....

device lock-ins: SIM cards, DRM, etc....

So... Cyberculture?

The technology is still in the “kludge” stage, as we’ve seen

But we work with what we have to enhance sociability

Pre-built infrastructures: GSM / G3, social networking sites, PVRs, embedded devices, quasi-legal file sharing / reading

“Guerilla” adaptations and work-arounds: p2p, thumb drives, hacks

A New Phase of the Web?

Phase 1: making the virtual

MUDs, IRC, email, listservs

Phase 2: moving the real into the virtual

IM, Java, ERP / CRM, email as a norm

Phase 3: integrating the virtual and the real

SMS (text-messaging), locational tech,
ubiquity [and the danger of outlaws]

Games?

[caveat thin expertise here on bob frost's part]

The “game experience” as an example of interpenetration of the virtual and the real

oldest: Space Invaders (stand-alone), MUDS (networked)

new: massively networked games in parallel, yet connected worlds Everquest, WoW)

newest: networked sex / adult gaming

Relevant signs: exchange rates & outsourcing

Transforming Sociability

Extending the notion of “small things loosely connected” (from Granovetter, 1983: “The Strength of Weak Ties”—social capital)

“Proximate sociability”

[see Mimi Ito...]

Presence awareness: not “here” but aware and connected

SMS, Skype, IM, Crackberry...

New dynamics of attention, “placeness,” caring & connecting

The Barriers...

The usual digital-divide parameters

cost, accessibility

knowledge capital and extant social & knowledge networks

Cognitive

mode- and context-switching

attention-slicing: “If your job is to never think one thought for more than 59 seconds, then yes, the blackberry is a productivity blessing.”—

Wellington Grey, Slashdot, 2006-04-08

Networks, Mapped...

Product recommendation network

- Purchase after a recommendation
- Customer product recommendation
- Customer not buying a recommended product

3. Election:

←

Developed
School In
in America," *AJS* 107, 6/9-7/16 (2001).

Thanks to Lada Adamic...

Exploiting Networks...

Viral marketing: leveraging social networks to sell stuff

Solves the inefficiency / cost-ineffectiveness of “blast ‘em”

Incentives to recommend [SunRocket]

Should we mix business and pleasure?

Do (and should) incentive models explain everything? 6° of sales?

BEYOND BUSINESS\$

- Simple social networks: MySpace, facebook, and Friendster (is there “niching” here?)
- Networks of interest and action
- “Yellow Arrow” networks of found places
- Bottom-up mashups and politicst; alternatives views of culture
- Share vibrations (how legal is this?)
- Personal erotica (from ifilm)

...and ourselves

Do we exist simultaneously and seamlessly in the real and virtual worlds?

Cognitively, perhaps... but then, do we assume the “mind-body” fracture?

avatars and doppelgängers; alone & lonely at the screen

Is “seeing” the same as “doing”?; virtual sex—what about fidelity?

Information is active: go beyond notion of “filtering” (passive) to the notion of constructing information.

Information doesn't happen, it is made, and it makes meanings

Handling information can be empowering!

Work

Play

Learn

Transform the World!
