Logistics

- We're in the Hatcher Library Gallery Lab
- Restrooms down the ramp and into the hall—women's on this floor, men's downstairs
- This workshop goes until 5 p.m. For the first half (or so), we'll mostly be learning about EPUB by looking at examples. In the second half, I hope you'll experiment—with my files, or your own
- Materials are available at <http://www.lib.umich.edu/digital-publishing-production/workshops>
- We'll leave about 5-10 minutes at the end to fill out an evaluation. Access the evaluation at <http://tinyurl.com/myES2011>

Goals for today:

- Understanding of EPUB ebook format, how it fits into the landscape of digital publishing, and how the format works
- Awareness of EPUB conversion tools and how to use them as a starting point for generating EPUB
- Confidence to inspect, edit, and create EPUB of your own
- Awareness of self publishing channels that provide support for the creation and distribution of ebooks

Important caveat!

This workshop is meant help you do cool things with:

- Your own work to which you retain the rights
- Works in the public domain
- Works that you are otherwise licensed to copy, edit, and/or distribute.

Questions about copyright? Contact the library's Copyright Office: copyright@umich.edu

First things first....

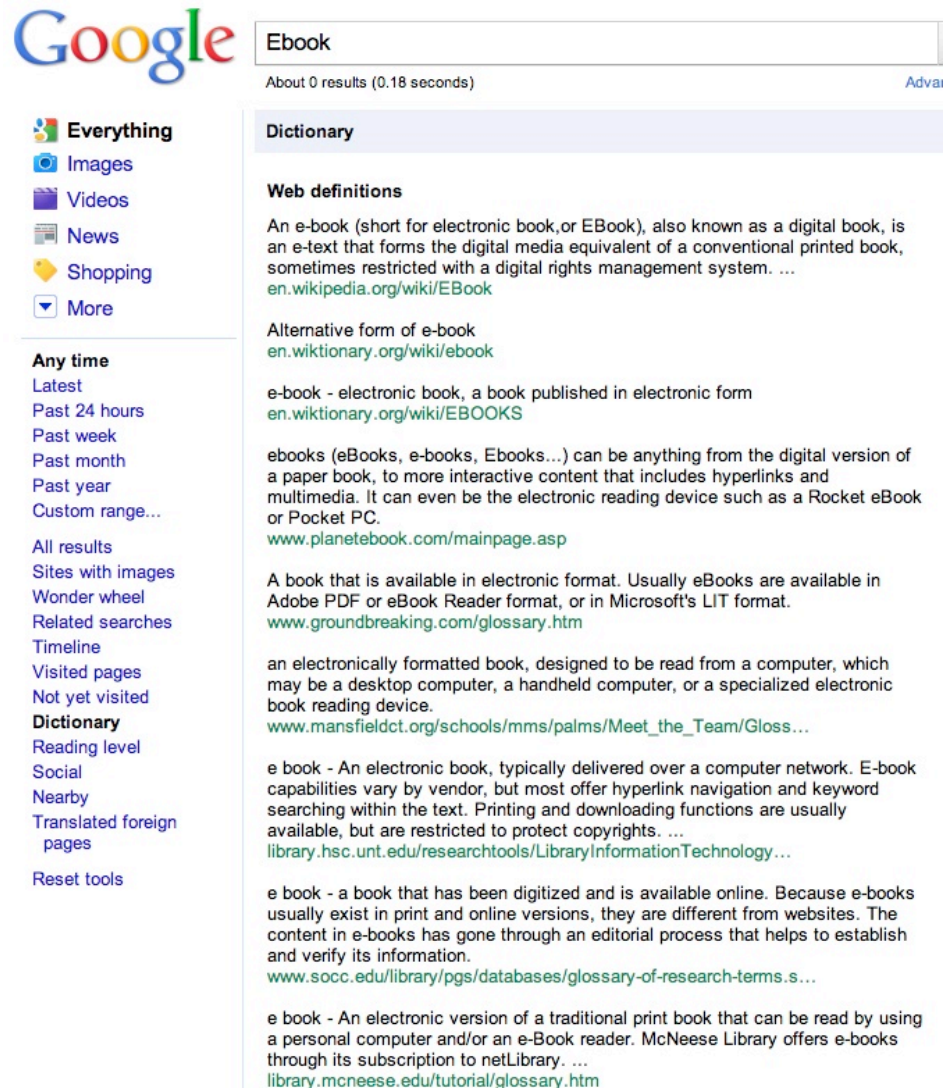

Do those who are interested have....

- An EPUB reader? (try: <http://ibisreader.com/>)
- Text Editor? (Try Text Edit or Notepad, one of which is probably bundled in with your OS)

...or, look on with a neighbor and work together

What is an ebook?

Traditionally, a) might be thought of as the library approach, while b) might be thought of as the publisher approach. But these lines are now crossing, blurring, and disappearing altogether

What formats are out there?

There are more than 30 ebook formats described at http://en.wikipedia.org/wiki/Comparison_of_e-book_formats

Big players include:

PDF (.pdf)

- Developed by Adobe systems
- Originally intended to reproduce the fixed appearance of a printed page; still typically used for this purpose
- Readable on many devices and platforms

• Kindle (.azw)

- Proprietary ebook format used by Amazon.
- Based on the open Mobipocket format.
- Reflowable text

• EPUB

- Reflowable text format
- Open standard used by many devices.
- Works by combining common formats like .html and .zip in specified ways

EPUB Overview

- Open standard created by the International Digital Publishing Forum (<http://idpf.org/>)
- Many publishers and vendors offer EPUB for sale or free download (Google Books, Internet Archive, Project Gutenberg, Barnes & Noble...)
- Many devices and apps read it (Nook, Sony Reader, Kobo, iBook, other mobile apps, web browsers with appropriate plug-ins....)
- EPUB 2.0.1 is the latest stable release—from September 2010. EPUB 3.0—with many new features—is under development and expected to be released in 2011

EPUB Overview (continued)

- The EPUB specification relies on three other standards:
 - Open Publication Structure (OPS) : Defines how content is encoded
http://idpf.org/epub/20/spec/OPS_2.0.1_draft.htm
 - Open Packaging Format (OPF): Defines how all files and metadata are packaged together and relate to one another
http://idpf.org/epub/20/spec/OPF_2.0.1_draft.htm
 - Open Container Format (OCF): Defines how all files are bundled together
http://www.idpf.org/doc_library/epub/OCF_2.0.1_draft.doc

The result—EPUB—is a renamed .zip file containing XML and XHTML files (and some other files, like images), that point to one another in standard ways.

Anyone who understands the structure can create or edit EPUB—no proprietary tools or software are required.

The anatomy of EPUB

1. Go to <http://www.archive.org/details/luluslibrary00alco> and download the EPUB of the book LuLu's Library.
2. EPUB is nothing more than a renamed ZIP archive containing various files. Unzip the EPUB to get at what's inside. If you're having trouble unzipping the file, raise your hand—we'll pass around a set of files already unzipped
3. Once you have a directory named `luluslibrary00alco`, containing directories called `META-INF` and `OEBPS`, we're ready to move on

4. If you're waiting for others, you might also go ahead and upload the EPUB (the zipped package) to a reader of your choice

The anatomy of EPUB

An EPUB file contains the following subdirectories and files:

- `mimetype` - tells software that tries to open the file what it is
- `META-INF` directory
 - contains, at minimum, the `container.xml` file, which tells the ereader software where to find the book content.
- `OEBPS` directory - Recommended location for the book's content. It contains:
 - `images` folder - images go here
 - `Content.opf` - XML file that serves as a manifest, or list, of what's here
 - `toc.ncx` - table of contents that allows navigation through the book
 - `.html` files - actual content of your book!

The anatomy of EPUB: `mimetype`

This file is just a plain ASCII text file that contains the line:

```
application/EPUB+zip
```

The software can look at this file to figure out that this is EPUB.

Try looking at it in a text editor:

The anatomy of EPUB: META-INF

This directory contains the file `container.xml`, which tells the software where to look for a full listing of the content of the book.

```
...<?xml version='1.0' encoding='utf-8'?>
<container xmlns="urn:oasis:names:tc:opendocument:xmlns:container" version="1.0">
  <rootfiles>
    <rootfile media-type="application/oebps-package+xml" full-path="OEBPS/content.opf"/>
  </rootfiles>
</container>
...
```

The anatomy of EPUB: OEBPS

• IDPF specification recommends (but doesn't require) that your book content goes in OEBPS. Most ereaders expect this. This directory contains the following files and subdirectories:

- `images` All image files in the book go in this directory
- `Content.opf` This is an xml file containing Dublin Core metadata about the book and a manifest of all the files contained in the book
- `toc.ncx` Table of contents for the book
- `xhtml files` The actual content of the book!
- `css file` Controls how the book content appears

Adapted from <http://www.jedisaber.com/eBooks/tutorial.asp>

Used with the permission of the author

The anatomy of EPUB: OEBPS/content.opf

Has three parts:

1. <metadata> lists information about the book (author, title, publisher, etc.) using the Dublin Core standard
2. <manifest> lists all of the files in book and provides a link to each
3. <spine> lists only the text content of the book—the XHTML files—in their proper reading order

LULU'S LIBRARY

Instead of dying in her cell, the fairy had made it beautiful. - PAGE 13.

I.

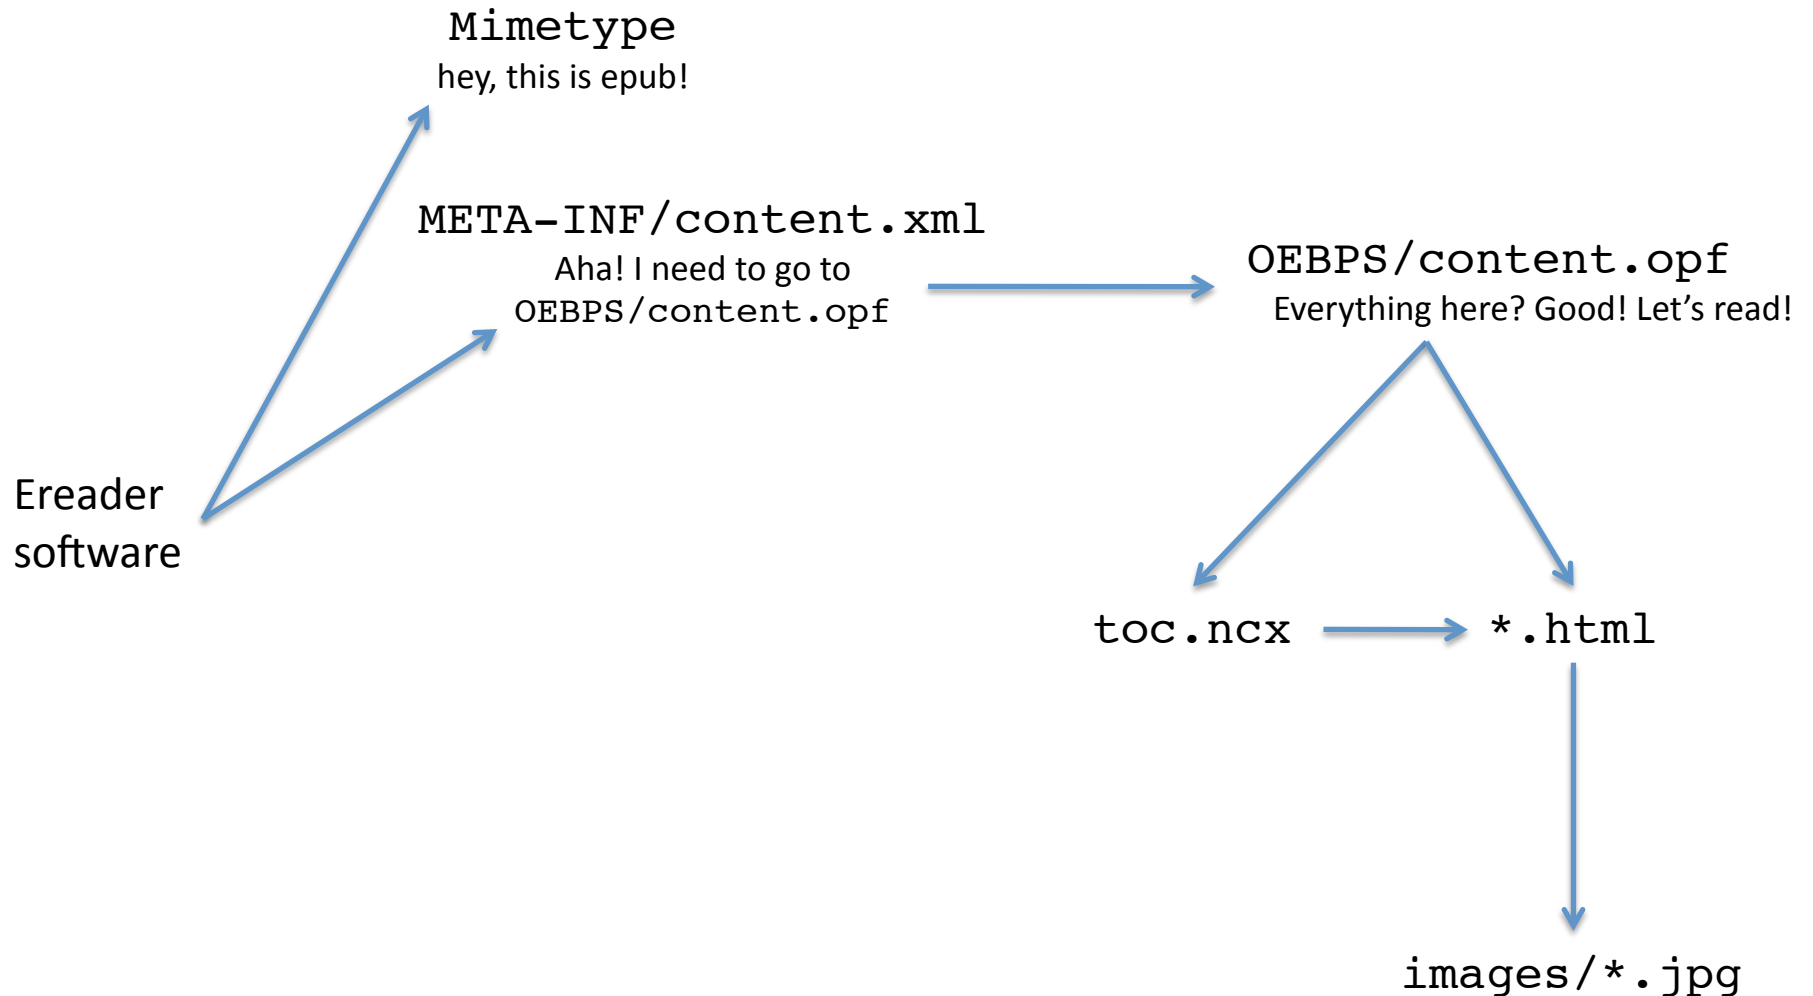

THE FROST KING AND HOW THE FAIRIES CONQUERED HIM.

r I ^HE Queen sat upon her throne, and all the fairies from the four kingdoms were gathered for a grand council. A very important question was to be decided, and the bravest, wisest elves were met to see what could be done.

The Frost King made war upon the flowers; and it was a great grief to Queen Blossom and her subjects to see their darlings die year after year, instead of enjoying one long summer, as they might have done but for him. She had sent messengers with splendid gifts, and had begged him to stop this dreadful war, which made autumn so sad and left the fields strewn with dead flowers. But he sent back the gifts, sternly refused her prayers, and went on with his cruel work; because he was a tyrant, and loved to destroy innocent things.

" My subjects, we will try once more," said the Queen, " if any one can propose a plan that will touch his hard heart and make him kind to the dear flowers."

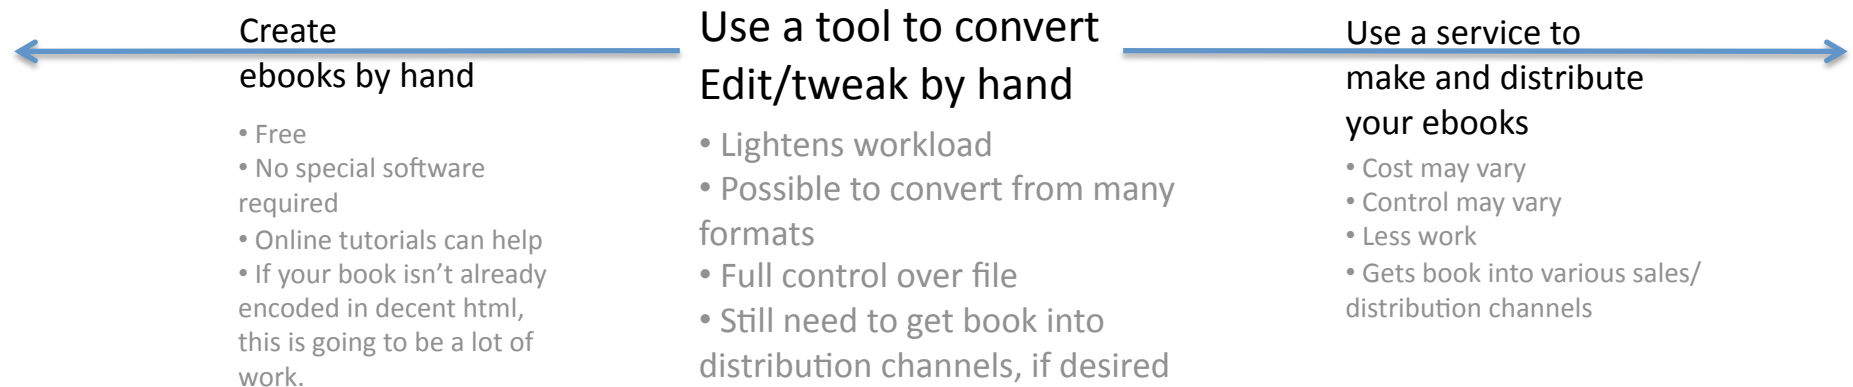

The Anatomy of EPUB: Putting it All Together

But how do I *make* EPUB from my own work?

On making EPUB

You don't have to do it alone!

Full service ebook conversion, distribution

- Services such as LuLu [<http://www.lulu.com/>] (which feeds into the Apple iBookstore) and PubIt! [<http://pubit.barnesandnoble.com/>] (Barnes & Noble sales channels) can provide help with converting your work to EPUB and make it available for sale
- Amazon's Kindle Direct Self Publishing [<http://kdp.amazon.com/>] does the same for the Kindle format and the Amazon sales stream

Tools to convert

Many free tools automatically create EPUB from other file formats

OxGarage [<http://www.tei-c.org/ege-webclient/>]

2EPUB [<http://www.2epub.com/>]

Calibre [<http://calibre-ebook.com/>]

...and many more!

But automated conversion will only get you so far...

Try it! (1)

1. Download our guinea pig files: my undergraduate senior thesis (as .doc, .pdf, or both) [<http://www.lib.umich.edu/digital-publishing-production/care-and-keeping-of-ebooks-may-4-2011>]
2. Try converting to EPUB using one or more of these tools. Do at least two different conversions
3. Upload the resulting EPUBs to a reader. Differences between the two are to be expected—each tool will map the source file to EPUB a bit differently, and the PDF and Word doc will each produce different results.
4. What changes would you like to see for this ebook to correctly represent the original paper? What parts of the EPUB package need to be edited?
5. Challenge: Unzip the EPUB and use your text editor to look at the files. Try to pinpoint places where changes need to be made, such as to the `toc.ncx`, the metadata, or to formatting in the `.html` files. (You don't need to know how to make the changes!)

Try it! (2)

Two ways to change the EPUB:

- Unzip the EPUB and edit it directly. This way, you'll know exactly what you've changed and have more control over the output
- Experiment with formatting in the Word document, run it through the conversion again, and look at the EPUB output in a reader. Does the output change if you apply styles to section headings? If you insert a dynamic Table of Contents in the Word document?
- Try it with your own documents; try converting from other formats like .html

Zippping up your EPUB

If you edit the EPUB directly, you'll need to re-zip the files before you upload them to a reader. There's a specific way this needs to be done so that the mimetype file doesn't get compressed and appears in the right place. Tips below come from Aaron DeMott:

Windows:

- Create an empty .zip file with whatever name you like (See notes below for creating the container in OS X)
- Copy the mimetype file into the zip file (don't use compression on this file)
- Copy the rest of the files and folders into the zip file
- Re-name the .zip extension to .epub
- NB: the EPUB specification requires the mimetype file to be the first file in the container. If you are using a GUI zip program, make a blank ZIP file, then copy just the mimetype file into the zip file, followed by the rest of the files. If you are using a command line zip utility, then either add the mimetype file first, or if your zip program of choice supports adding multiple files/folders at a time, make sure the mimetype file is the first one in the list.

Mac OS X

- Prepare your content like normal
- Right-click the folder the files are in (ensure they are in their own file first) and click "Compress Folder"
- Change the "zip" extension to "epub"
- The problem with this method is that the mimetype file isn't necessarily added to the zip folder first. A user at the mobileread forums has created an Applescript that will do the zipping for you, in the right order. You can get it here: <http://www.mobileread.com/forums/showthread.php?t=55681>

Take Aways?

- EPUB is not a “black box.” It’s a structured set of files that you can control (barring DRM)
- You can build EPUB yourself from the ground up, get a service to do it for you, or something in between
- Many tools are available to package your text into EPUB—but some manual editing, requiring familiarity with EPUB and HTML, will be needed for the book to look right.
- Formatting makes a difference! Submitting highly consistent, structured electronic text to the conversion tool will help your EPUB output from the get-go
