16. Abstract <p>This document presents aggregate statistics on trucks involved in traffic accidents in 2008. The statistics are derived from the Trucks Involved in Fatal Accidents (TIFA) file, compiled by the University of Michigan Transportation Research Institute. The TIFA database provides coverage of all medium and heavy trucks recorded in the Fatality Analysis Reporting System (FARS) file. TIFA combines vehicle, accident, and occupant records from FARS with information about the physical configuration and operating authority of the truck from the TIFA survey.</p>

(Revised September 1993)

Acknowledgments

The data documented in this report are the product of the dedicated efforts of many people. The project originated under the direction of Ken Campbell. Daniel Blower directs the current project. Leslie Pettis, Daniel Hershberger, Robert Allen, Robert Pichler, and many interviewers made the accuracy of the data a matter of personal pride. The project would not have been possible without the willing cooperation of thousands of truck owners, operators, and police officers across the country.

The TIFA Survey is conducted by the Center for National Truck and Bus Statistics at the University of Michigan Transportation Research Institute with support from the Federal Motor Carrier Safety Administration. The National Highway Traffic Safety Administration's National Center for Statistics and Analysis and FARS analysts in the states provided assistance in acquiring police reports from the respective states. We are sincerely grateful for their efforts.

Introduction

This report, *Trucks Involved in Fatal Accidents Factbook, 2008*, provides descriptive statistics about medium and heavy trucks involved in fatal accidents. The data come from the Trucks Involved in Fatal Accidents (TIFA) survey program of the Center for National Truck and Bus Statistics (CNTBS) at the University of Michigan Transportation Research Institute (UMTRI). All records in the TIFA file are for trucks with a Gross Vehicle Weight Rating (GVWR) over 10,000 pounds.

The TIFA file is produced annually from a survey of truck records extracted from the Fatality Analysis Reporting System (FARS) file, compiled by the National Center for Statistics and Analysis at the National Highway Traffic Safety Administration. Accident, vehicle, and driver records that appear to involve a medium or heavy truck are selected from the FARS file. Police reports for each accident represented are requested from the appropriate states. The 2008 TIFA file is a census file, meaning there is one record for each of the 4,352 medium and heavy trucks involved in a fatal accident that year.

Trained and experienced interviewers contact individuals knowledgeable about the truck, including drivers, safety officers, police officers, emergency personnel, and witnesses. The interviewers verify that the vehicle is a truck and then collect information about the truck, truck driver, and the motor carrier that operated the truck. The interview produces a detailed description of the physical configuration of the truck, the operating authority of the truck, and the trip the truck was on at the time of the accident. Editors review each case to ensure accuracy and consistency.

The TIFA file combines the detailed physical description of the vehicle from the TIFA survey with matching accident, driver, and vehicle data from the FARS file. Almost all variables in FARS describing the accident, vehicle, and driver are included in the TIFA file. No FARS data are altered or corrected. The TIFA variables supplement the FARS data with extensive detail on the truck, including cab style; axle counts for each unit in the truck configuration; cargo body and cargo type for each unit; truck operating authority; type of trip; hours driving; and the truck's role in the accident. The methodology, as well as a complete list of variables and data in the TIFA survey, is fully documented in *Trucks Involved in Fatal Accidents Codebook, 2008*.

Report overview

This report consists of six sections. The “Trends” section provides data on fatalities and fatal accident involvements from 2004 through 2008. The “Accident conditions” section provides information about the accidents the trucks were involved in, including distributions of truck fatal involvements across states, and information about the weather, road type, and roadway condition at the time of the accident. The “Vehicle” section includes information about truck configuration, cargo body type and cargo carried, and axle counts of the trucks. The “Driver” section includes information about truck driver injury, licensing, type of

compensation, previous driving record, age, sex, and other driver characteristics. The “Straight trucks” section focuses on the characteristics of straight trucks, providing more detail about truck configuration, accident environment, and the truck’s role in the accident. Finally, the “Tractors” section provides similar data on tractor combinations involved in fatal accidents.

Virtually all tables present counts of involvements; that is, counts of the trucks involved in a fatal accident by various factors and conditions of interest.

Trends, 2004-2008

This section contains tables displaying trends in truck involvements in fatal traffic accidents and in the number of persons killed in those accidents. The trends are presented by truck configuration, state, and person type. The truck configurations include straight trucks with no trailers, straight trucks pulling a single trailer, bobtails (tractors with no trailers), tractors with one semitrailer, tractors with two trailers (doubles), and all other truck configurations. The “other combinations” includes both straight truck and tractor configurations that do not fit into any of the previous categories.

- An average of about 5,061 trucks are involved in a fatal traffic accident each year.
- Tractors pulling one semitrailer are the most common truck configuration involved, accounting for about 59% of all trucks involved in a fatal accident.
- Texas, California, and Florida had the greatest number of truck involvements over the period 2004 to 2008.
- The number of persons killed in accidents involving a truck decreased from 5,663 in 2004 to 4,508 in 2008.
- The number of truck drivers killed in traffic accidents decreased from 700 in 2004 to 639 in 2008.
- An average of 362 pedestrians and 87 cyclists (bicycles, unicycles, tricycles) are killed each year in traffic accidents involving trucks.

Annual fatal involvements

Figure 1-2
Fatalities in Truck Involvements by Year and Person Type

Accident conditions

This section provides statistics that describe conditions at the scene of fatal traffic accidents involving trucks. Tables present various accident characteristics, including the geographic distribution of truck involvements, temporal and environmental conditions, as well as distributions of collision type and the truck's role in the accident. Though the tables focus on accident-level characteristics, all tables show counts of trucks involved in fatal accidents, rather than counts of accidents. Some fatal traffic accidents include more than one truck.

- February had the greatest number of fatal involvements with 402, while March had the fewest with 297.
- Almost two-thirds of fatal accident involvements occur in rural areas, and in daylight.
- 80.9% of fatal accident involvements occur on dry roads.
- 84.7% of fatal accident involvements occur in “normal” (i.e., no precipitation) weather conditions.
- 29.4% of fatal involvements occur on state highways, 23.8% on U.S. highways, and 27.1% on Interstate highways.
- In 11.0% of fatal involvements, the other vehicle crossed the center line of the road and struck the truck head on.

Vehicle

This section provides statistics that describe the physical configuration of trucks involved in a fatal accident in 2008. The tables cover truck configuration, cargo body and cargo type, cab style, truck model year, rollover occurrence, presence of collision avoidance systems, hazardous materials, and the type of carrier that operated the truck. Of the 4,352 trucks involved in a fatal accident in 2008, there were 2,547 tractor-semitrailers, 1,315 straight trucks with no trailer, 193 straight trucks pulling a trailer, 79 bobtail tractors, and 136 tractors pulling two trailers.

- Straight trucks with no trailer represented 30.2% of all trucks involved in a fatal accident.
- Tractor-semitrailers accounted for 58.5% of the trucks.
- Over half of the tractor-semitrailers pulled a van trailer - either a dry box van or a refrigerated van.
- 19.5% of the straight trucks had dump bodies. The next most common straight truck cargo body was a van body, with 17.5%.
- 30.7% of the trucks were empty, 20.1% were carrying general freight, and 13.3% were carrying solids in bulk (gravel, soil, etc.) at the time of the accident.
- 72.9% of the trucks involved in a fatal accident were Class 8, the heaviest Gross Vehicle Weight Rating (GVWR) class.
- 47.5% of the trucks were operated by interstate for-hire carriers, 16.0% by interstate private carriers, and 13.1% by intrastate private carriers.
- 36.0% of the trucks were on local trips (within 50 miles of base) when involved in the fatal accident.
- 39.9% of tractor-semitrailers and 41.9% of tractors with two trailers (doubles) had a speed limiter installed.
- 58 tractor-semitrailers and 15 straight trucks involved in a fatal accident were carrying flammable liquids at the time of the crash.
- 9.5% of tractor-semitrailers with a tank body style rolled over as the first event in the fatal crash, and 15.5% rolled as a subsequent event.

Fatal Truck Involvements by Rollover Status and Year

Note: Data from Trucks Involved in Fatal Accidents, 1989-2008

Driver

This section provides statistics on the drivers of trucks involved in fatal traffic accidents. Tables cover driver age, sex, alcohol or drug use, safety belt use, driver injury, compensation, hours driven, licensing, previous driving record, and driver factors related to the accident.

- 3.1% of truck drivers involved in a fatal traffic accident had been drinking.
- Drug use was reported for 1.2% of truck drivers in a fatal crash.
- 95.4% of truck drivers involved in a fatal accident were male.
- 639 truck drivers were fatally injured in a traffic accident.
- 1.6% of truck drivers involved in a fatal accident were recorded as drowsy or asleep.
- Failure to stay in lane was the most common driver factor recorded (10.9%), followed by inattentive (6.1%), driving too fast for conditions (4.8%), and failure to yield (4.0%). Cellular phone in use was cited for 0.3% of drivers.
- 62.1% of truck drivers had no driver factors recorded.
- 44.8% of straight truck drivers are paid by the hour, compared with 13.7% of tractor-semitrailer drivers. Drivers of tractor-semitrailers are most commonly paid by the mile (24.4%), compared to 0.6% of straight truck drivers. However, method of compensation could not be determined in 40.1% of involvements.
- Drivers of government-owned and private company trucks are predominately paid by the hour, 82.0% and 47.8%, respectively.
- Drivers of 25.2% of Intrastate trucks and 15.0% of Interstate trucks had been driving one hour or less at the time of the accident.

Injuries are classified according to severity under the following levels:

Severity category	Definition
K	Fatal injury
A	Incapacitating injury
B	Evident but not incapacitating
C	Complaint of pain
O	No injury

Straight trucks

This section provides descriptive statistics on straight trucks involved in a fatal traffic accident in 2008. All truck configurations in which the power unit was a straight truck are included in this section. A straight truck is a truck power unit with a permanently attached cargo body. Straight truck configurations include trucks pulling no trailers, trucks pulling a full or other trailer, and wreckers towing cars or other straight trucks.

- Truck configurations with a straight-truck power unit accounted for 34.8% of all trucks involved in a fatal traffic accident in 2008.
- 36.7% of straight trucks were Class 8 (over 33,000 lbs.) Gross Vehicle Weight Rating (GVWR), and 24.2% were Class 3 (10,001-14,000 lbs.).
- 37.0% of straight trucks were empty at the time of the accident; while solids in bulk was the most frequent cargo type, accounting for 20.2%.
- 55.8% of straight truck configurations involved in a fatal traffic accident had two axles, 25.9% had three axles (including the trailer), and one straight truck combination had six axles on the power unit and five axles on the trailer.
- 27.6% of straight trucks were operated by a private, intrastate carrier; 23.4% by a private, interstate carrier; and only 10.0% by a for-hire, interstate carrier.
- 61.9% of straight trucks were on a local trip (within 50 miles of base) at the time of the accident.
- 246 straight truck drivers were fatally injured in a traffic accident; 49.6% occurred in ran-off-road crashes, 9.3% were the result of an untripped rollover, and in 6.1% of cases the truck struck the rear-end of another vehicle.

Note: 238 straight trucks had “other” cargo bodies, bodies that did not fall into any named cargo body type. Most of these were utility bodies or some other working body type such as wreckers, concrete pumps, or boom trucks.

Configuration

Table 5-1
Fatal Truck Involvements by Truck Configuration

Configuration	N	%
<i>Straight truck only</i>	1315	86.7
<i>Straight truck, 1 trailer</i>		
Straight + full trailer	38	2.5
Straight + other	104	6.9
Straight + other, gooseneck hitch	50	3.3

Tractors

This section provides descriptive statistics on tractor combinations involved in a fatal traffic accident in 2008. All truck configurations in which the power unit is a truck-tractor are included in this section. A tractor is a truck power unit with a fifth-wheel designed to pull semitrailers. Tractor configurations include tractors pulling no trailers (bobtail), tractors pulling one or more semitrailers, and other configurations with supplementary units such as jeeps that permit hauling very heavy loads or configurations in which the tractor towed other tractors by means of saddlemounts. Most tables cover all tractor combinations, but some are limited to tractor-semitrailers and some are limited to tractors with two trailers (doubles).

- Truck configurations in which the power unit was a tractor accounted for 2,776 of the 4,352 trucks (63.8%) involved in a fatal accident in 2008.
- 94.2% of the power units in tractor combinations were Class 8 (over 33,000 lbs.) Gross Vehicle Weight Rating (GVWR).
- 28.0% of tractor combinations were empty at the time of the accident; while the most common cargo was general freight with 27.1% of tractor involvements.
- 89.0% of tractor-semitrailer configurations consisted of a three-axle tractor pulling a two-axle trailer. 49.3% of doubles (two trailers) consisted of a two-axle tractor with a one-axle first trailer and a two-axle second trailer.
- 68.9% of tractor combinations were operated by for-hire, interstate carriers; 12.4% of tractors were operated by private, interstate carriers.
- 22.6% of tractor combinations were on a local trip (within 50 miles of base) at the time of the accident; 18.8% were on a trip over 500 miles.
- 387 tractor drivers were fatally injured in a traffic accident; 56.3% of the fatalities occurred in single vehicle crashes; 4.9% involved hitting an object in the road, while 51.4% were ran-off-road crashes.

Configuration

Table 6-1
Fatal Truck Involvements by Tractor Configuration

Configuration	N	%
<i>Tractor, no trailers</i>		
Bobtail tractor	68	2.4
Tractor carrying cargo	11	0.4
<i>Subtotal</i>	<i>79</i>	<i>2.8</i>
<i>Tractor, 1 trailer</i>		
Tractor and semitrailer	2547	91.8
Tractor + other (nonsemitrailer)	8	0.3
<i>Subtotal</i>	<i>2555</i>	<i>92.0</i>
<i>Tractor, 2 trailers</i>		
Double with A dolly	89	3.2
Double, B train	2	0.1
Double with unknown dolly	4	0.1
Tractor + semitrailer + full trailer	38	1.4
Tractor + semitrailer + unknown	3	0.1
<i>Subtotal</i>	<i>136</i>	<i>4.9</i>
<i>Tractor, 3 trailers</i>		
Triple with A dollies	1	0.0
<i>Subtotal</i>	<i>1</i>	<i>0.0</i>
<i>Other tractor combinations</i>		
Tractor + jeep + semitrailer + other	1	0.0
Tractor + semitrailer + jeep	1	0.0
Tractor + saddlemount tractor	2	0.1
Tractor + 3 saddlemount tractors	1	0.0
<i>Subtotal</i>	<i>5</i>	<i>0.2</i>
<i>Total tractors</i>	<i>2776</i>	<i>100.0</i>

Glossary and abbreviations

Glossary

A- dolly

An auxiliary axle assembly that attaches to a semitrailer by means of a pintle hitch at a single point. This allows the semitrailer to be used as a full trailer.

Bobtail

A tractor operating without a trailer. May also refer to a straight truck without a trailer.

B- train

A B-train is a doubles combination with a rear platform on the first trailer on which is mounted a fifth wheel to which another semitrailer may be attached.

C- dolly

A converter dolly with two drawbars that attach at two connection points to the first trailer in a doubles combination. These dollies can have one or more axles.

Cabover

A vehicle with a substantial part of its engine located under the driver's cab, so that the windshield is at the front of the vehicle. Thus, the cab sits over the engine.

CDL

Commercial Driver's License

CNTBS

Center for National Truck and Bus Statistics at the University of Michigan Transportation Research Institute (UMTRI)

Combination vehicle

A vehicle consisting of a power unit (truck or truck tractor) and one or more trailing units (such as a semitrailer).

Conventional cab

A conventional cab vehicle has the engine in front of the driver's cab.

Dolly (converter dolly)

An auxiliary axle assembly having a fifth wheel, used for the purpose of converting a semitrailer to a full trailer.

Double

A combination vehicle consisting of a tractor pulling two trailers.

Ejection

Refers to occupants being totally or partially thrown from the vehicle as a result of an impact or rollover.

Empty combination weight

The weight of the power unit and unloaded weight of the trailer(s).

FARS file

Fatality Analysis Reporting System file, compiled by the National Center for Statistics and Analysis at the National Highway Traffic Safety Administration.

Fatal involvement

The involvement of a truck in a fatal crash. The fatality does not necessarily occur in the truck.

Fifth wheel

The hitch used to attach a tractor to a semitrailer. It usually consists of a plate and latching mechanism mounted on the truck tractor (or converter dolly), into which fits a kingpin assembly mounted on the trailer.

For-hire carrier

A company that transports goods for compensation; i.e. the load-carrying capacity of the truck is for hire.

Full trailer

A trailer with axles at the front and at the rear, or along its entire length.

Gooseneck

A hitch resembling the neck of a goose; can be a fifth wheel or ball hitch attachment. Both straight trucks and tractor-trailer rigs can use gooseneck hitches.

Gross combination weight

The sum of the weight of all units of the vehicle (power unit and any trailers) and the weight of any cargo carried.

Gross vehicle weight rating (GVWR)

The maximum rated capacity of a vehicle, including the weight of the base vehicle, all added equipment, driver and cargo.

Hopper bottom

A cargo body capable of discharging its load through a bottom opening without tilting.

Injury severity

Injuries are classified according to the following categories:

K = a fatal injury

A = an incapacitating injury, other than fatal, that prevents a person from walking, driving, or normally performing the activities the person was capable of before the injury.

B = a non-capacitating injury that is visible or evident to observers at the scene of the crash.

C = a possible injury that is reported as complaint of pain, but which is neither incapacitating nor evident to observers at the scene of the crash.

O = no injury

Interstate carrier

A carrier that transports goods across state lines.

Intrastate carrier

A carrier that operates entirely within the state, and does not transport goods across state lines.

Involvement

Represents a truck involved in a fatal accident; an accident may consist of one or more truck involvements.

Jackknife

The skidding of an articulated vehicle, resulting in rotation at the articulation point so that the tractor is rotated against the trailer in a manner similar to the closing of a jackknife.

Jeep

A trailing piece of equipment similar to a dolly with its own axles, typically found in heavy haul operations. It is used to increase the cargo-carrying capacity of a combination, as well as affect weight distribution by transferring the load weight through a greater number of axles.

License endorsements

Authorizations to an individual's commercial driver's license (CDL) required to permit the individual to operate certain types of commercial motor vehicles.

Lowboy

A flatbed trailer with a low floor used for hauling heavy equipment. The deck is typically 12" off the ground.

Open top

A cargo body with sides but without a permanent top.

Other trailer

Any trailer that does not fit into the semi or full trailer type categories. Examples are tag-along equipment such as bush chippers, or trailers with axle placement in any fashion besides the traditional front and rear configuration of the full trailer.

Over-the-road

Travel from one city to another, typically greater than fifty miles, as distinct from travel in and around the vehicle's base.

Piggyback

Refers to the way empty log trailers are carried on the bed of a tractor such that no axles touch the road. Also may refer to vehicles carried on the rear of a power unit in a manner that axles do contact the road.

Power unit

A truck, or the part of a combination that houses the engine.

Private carrier

A company which maintains its own trucks to transport its own freight.

Saddlemount tractor

A configuration consisting of a truck or tractor towing one or more trucks or tractors, where the towed unit is attached to the vehicle in front of it, utilizing a saddle that is attached to the frame or fifth wheel of the leading unit. The saddle mechanism is attached to the front axle of the towed vehicle.

Semitrailer

A trailer whose front rests on the back of a tractor, coupled to the tractor by a fifth wheel and kingpin. It has no front axle.

Straight truck

A truck power unit with a permanently attached cargo body. It may or may not pull a trailer.

TIFA file

Trucks Involved in Fatal Accidents is an annual survey of medium and heavy trucks involved in a fatal accident, conducted by the Center for National Truck and Bus Statistics at the University of Michigan's Transportation Research Institute.

Tractor

A vehicle designed to pull a semitrailer, generally with no cargo capacity. It has a circular fifth wheel plate for coupling to the semitrailer at its kingpin.

Trailer

A vehicle with or without motive power, designed for carrying persons or property and for being drawn by another motor vehicle. Examples are semitrailers, full trailers and other trailers (see separate definitions).

Triple

A combination vehicle consisting of a tractor pulling three trailers.

Table of Abbreviations

Abbreviation	Definition
CDL	Commercial driver's license
Combs/oth combs	Combinations/other combinations
Convs	Convictions
Dist	Distance
Eject	Ejection
Equip	Equipment
LCV	Longer combination vehicle
Misc	Miscellaneous
Occ	Occupant
Opp	Opposite
Piggybk	Piggyback
Prev	Previous
Req	Required
Semi	Semitrailer
STAA	Surface Transportation Assistance Act
Stat	Statutory
Strt	Straight truck
Trac	Tractor
Trlrs	Trailers
Unk	Unknown
Veh	Vehicle
Viol	Violation
Wt	Weight
WO	Without
Injuries are classified according to severity under the following levels:	
K	Fatal injury
A	Incapacitating injury
B	Evident but not incapacitating
C	Complaint of pain
O	No injury
