Why do college presidents suffer through so many crises, go to so many breakfast meetings, force themselves to give so many speeches, ...and consider themselves luck to serve as presidents?

Why do professors in research universities report that they enjoy their work more than members of almost any other occupation?

Why do college years evoke such energy and enthusiasm from undergraduates and linger so long in their memories?

Because no other institution offers such freedom to think and write as one chooses, to enjoy such a wealth of stimulating people and engrossing activities, to be creative and independent, yet have the satisfaction of serving others in important ways.

Yet, there are dangers that may prove especially to universities in the years ahead.

Education and research are the primary functions of a university and its principal contributions to society.

When universities act in ways inconsistent with the pursuit of education and research, they do not merely compromise their mission; they threaten reservoirs of confidence and trust on which their welfare ultimately depends.

Achieving the highest quality of education and research requires respect for several basic principles:

i) choose professors because of their ability as teachers and scholars...not for role models or diversity

ii) chose students based on their ability to learn

A genuine commitment to education and research also means that universities accept a common set of standards in evaluating the academic work of faculty and students.

New ideas must be tested, insofar as possible, by accepted standards of logic, internal consistency, clarity of expression, and correspondence to known facts.

Students and scholars must be able to do their work in an atmosphere of tolerance. Scholarship will flourish only if members of the academic community do their best to remain open to new or opposing ideas and to evaluate them on their merits.

The principal work of presidents, provosts, and deans is to maintain an environment that fosters learning and discovery.

This task demands a constant readiness to resist all pressures that threaten to undermine the tolerance and the commitment to high intellectual standards so essential to education and research.

Every compromise with the academic mission threatens, at least in some small degree, the integrity of the university, the commitment of faculty and students, and the confidence of the public.

The Politicized University

The first temptation is to embroil the university in political conflicts that divide, distract, and ultimately weaken the institution.
Now that universities have grown in influence, more and more organizations and groups are tempted to use them to achieve some purpose in the larger world.

In the past quarter century, attempts to use the university to achieve political ends have come increasingly not from government officials but from groups within the campus. Various groups have repeatedly urged universities to divest shares or boycott products.

It is important to note that universities are not very good at passing collective judgments on political issues in the outside world. Their decisions often reflect the strong convictions of strategically placed minorities—whether they be trustees or activist groups—rather than the informed judgment of the entire community.

If university officials tried to act consistently and fairly in taking sides in social controversies, they would have to spend an inordinate amount of time and effort on the task.

Perhaps the greatest danger in exerting political pressure, however, is the risk of sacrificing academic independence. Universities can hardly claim the right to be free from external pressure if they insist on launching campaigns to force outside organizations to behave as their students and faculties think best. Generations of effort to secure autonomy will have been placed in jeopardy.

As individuals we should all feel an obligation to speak and work for causes we believe in. But the university has a more limited role, since it is not an individual but an academic institution charged with the special mission of promoting education and research.

When we stray from our academic pursuits, however, and try to exert institutional pressure for political ends, we abandon our proper mission and take up tasks for which we are not well equipped.

Universities must resist deliberate, overt attempts to impose orthodoxy and suppress dissent.

In recent years the threat of orthodoxy has come primarily from within rather than outside the university. Angered by prejudice in the larger world, many students and faculty have been vocal in criticizing bigotry, opposing war, attacking discrimination and oppression, and urging that the curricula be opened to underrepresented authors and neglected points of view.

But zealous proponents have sometimes gone further to assemble a daunting list of ideas, words, and phrases—some of them quite familiar and seemingly innocuous—that one can utter only at the risk of being labeled racist, sexist, hegemonic, patriarchal, gynophobic,…or worse.

It is likewise doubtful, however, that the tactics of "political correctness" have cramped the thoughts of students any more than the orthodoxies of prior periods. On the contrary, conservative views are clearly more prominent on campus now than they were 20 years ago.

Political zealotry also carries a risk of undermining academic standards.

Left wing professors may trumpet an intent "to transform the hegemonic cultural forms of the wider society and the academy into a social movement of intellectuals intent on reclaiming and reconstructing democratic values."

Conservatives claim that "behind the transformations contemplated by the proponents of feminism, deconstruction, and the rest is a blueprint for a
radical social transformation that would revolutionize every aspect of social and political life."
The media are quick to report these outburts and to garnish them with accounts of the same oft-told episodes of intolerance and ideological warfare that have cropped up on various campuses. The ultimate risk in these overheated struggles is that they will undermine confidence in the academic enterprise. The only feasible defense is to have university leaders strong enough to make it clear that academic standards and intellectual freedom will be preserved despite the battles that periodically erupt on their campuses.

The Overextended University

There are lots of pressures for additional missions:

i) The desire for further education and training at later stages in life
ii) The global preeminence of America’s universities
iii) Increasing appetite for expert advice

Bok believes there will be multiplication of

o development of educational institutions abroad
o help for public schools
o mounting interest in ecology
o provision of legal services to poor
o executive and continuing education
o study abroad
o urban problems

Yet this profusion of new opportunities raises genuine risks for the university. The most obvious is the possibility of diverting the energies of the faculty from more important educational programs and scholarly pursuits.

New opportunities can also burden the administration with the weight of supervising more and more activities. In an overextended organization, the effort to maintain standards grows steadily more difficult...the attention span of top administrators is only so great.

Of course we cannot turn back the clock by restricting the university’s activities only to the most traditional.

Can universities muster the self-discipline to avoid new service programs that are not uniquely suited to an academic institution?

Key tests:

1) New programs should have potential to achieve a special quality not attainable in another institutional setting.
2) Proposed initiative should have capacity to benefit the university by contributing in some important way to education and research.

Will universities summon the will to review existing programs and service activities and to abandon those that are not of high quality or no longer serve a pressing need? In hindsight successful efforts to trim unnecessary programs always seem worthwhile.

Must also exert control over outside activities of faculty.

Bok has come to view that deans should collect enough information that they will know about faculty’s outside activities.

Finally, can universities develop new organizational forms that will allow students and faculty to render useful services on a controlled basis without unduly burdening the administration? Uses the model of the teaching hospitals as most appropriate.

Believes that we should form similar types of independent
organizations to handle service activities...with own board and administrative staff that would negotiate with the faculties over the involvement of students and professors and the appointment of professional staff.

The Commercialized University

Efforts to turn university activities into money can easily distract the institution and cause it to sacrifice its most essential values.

A glaring example is big-time athletics. Universities attract the loyalty of faculty and alumni and the respect of the public precisely because they act for reasons other than money and will not compromise certain values simply to gain immediate monetary rewards.

He believes this is the most serious challenge.

Summary

We who preside over universities almost always turn to the external forces--financial, regulatory, demographic--that hamper out activities and limit our ambitions.

But perhaps our deepest, most vexing dilemmas may lie within our institutions.

All of these internal challenges force us to renew and redefine the values most essential to the academic enterprise and to the confidence of those on whom it depends.

Ironically, it is the very success, the visibility, the mounting influence of our universities that have brought about these pressures and made them so strong.

HTS: Academic Freedom

The relationship between the modern university and society is very complex and fragile because of the university's dual role as society's servant and as society's critic.

Society's support for this dual concept has been ultimately sustained by faith in rationalism, faith in knowledge and science, and the resulting notion of human progress. Perhaps one of the most distinctive ideas of Western civilization is that nature, by itself, cannot achieve its full potential. Rather what is needed is a mutually beneficial interaction among nature, science, and humankind. The university plays an increasingly central role in this process.

Society must continue to preserve the university's essential freedom to remain a critic of existing arrangements--whether in science or society. Our future depends even more on freedom preserved than on full funding retained.

We should not lose sight of the fact that at times academic freedom is threatened not only by forces external to the university, but by our colleagues among the students and faculty with little respect for views other than their own.

Distinctively American traditions in higher education

1) faculties and students are responsible to some external community, whether public or private
2) American higher education is decentralized and diverse
3) Educational and research programs of American colleges serve an unusually wide spectrum of society's needs for highly trained personnel and the knowledge underlying this training
4) American universities serve a dual role as both society's servant and society's critic
5) Emergence of the tradition of academic freedom during this century shifted power and independence from the central administration and external trustees to the faculty
6) America's colleges are extraordinarily accessible to
the nation’s pool of appropriately qualified and moti

Openness in an Academic Community

The openness of heart and mind is an essential ingredient of
university research and teaching programs and a prerequisite of
our intellectual credibility.

Indeed, the primary role of the university should be to foster
an environment of intellectually disciplined free inquiry and
exchange of ideas.

In this environment, each faculty member and student must act as
trustee for the value of intellectual openness and the
unimpeded exchange of ideas, disciplined only by that
careful scrutiny necessary to ensure honesty, completeness,
and the use of appropriately rigorous analysis.

Universities are frequently exhorted by various interest groups
to take official positions on issues such as military research.
Often the groups making such demands are perplexed by the
resistance they meet, since they believe their particular
perspective promotes the long-term best interest of the
human community and, therefore, the university community
as well.

The work of the academic community is undeniably related to
and supported by a particular set of values, including the value of
knowledge, the benefit of fair and open inquiry, the respect for
other points of view, and the possibility of human progress.

We must, however, be extremely cautious to adding to this list.
Without a means of distinguishing ideas from ideologies, we
may undermine the environment that supports our principal
commitments and responsibilities. Returning to an earlier model
of moral, political, and scientific orthodoxy would undercut
academic freedom and open discourse, transforming the characteristic
of higher education and impairing the university’s capacity to serve
society.

It seems ironic that so many different segments of the political
spectrum, including both the left and the right, now want to
constrain academic freedom and openness.

A university remains a creative part of society only as long as it
remains an intellectually open community and not the ally of
a particular point of view.

Tenure

Tenure is one of the chief means by which the academic freedom
of individual faculty members, and more broadly, of the
university itself is protected. Academic freedom, in turn,
isa throught to be the essential ingredient that enables a
modern university to fulfill its function.

The public has never really understood or accepted the transformation
of the modern university into an institution with a fundamental
responsibility not only for training and research but for questioning
all of society’s current arrangements as well. In short, our concern
is and ought to be whether the public understands the role and
need for academic freedom itself.

Current notions of academic freedom and tenure arose in response to
the new and expanded role of the modern university. If that role
should again change significantly, academic freedom and tenure
would have to be reevaluated.

From the beginning, the trustees, not the faculty, constituted the
college or university in the eyes of the law.

As universities began to following the German model in the late 19th
century, the need for a setting congenial to inquiry and discovery--
led them to the idea of academic freedom. This idea coincided
with the establishment of public universities, which would take on
an expanded set of functions and responsibilities.

Thus, at American universities, we have yet to celebrate the centennial
of academic freedom and the particular institution that supports it,
academic tenure. In the sweep of history these are very recent practices indeed.

The concept of academic freedom as a defining ingredient of the modern university reflects the profoundly changed function of universities during the past century...as the belief in the redemptive power of intellectual discovery and insight, of reason and inquiry, began to replace the centuries-old trust in the redemptive power of religious faith.

Universities came to be seen as providing the appropriate setting for such scientific as well as humanistic inquiry. Tenure was designed as the guarantor of academic freedom in that it allowed the objectivity and independent necessary to new understanding, which was itself necessary for human progress.

Should inquiry and change become less central to university-based education and scholarship and other values and objectives take priority, another transformation may be in order. Academic freedom may or may not be a critical component of such a future community.

The contemporary notion of academic freedom is inextricably linked to society’s attitudes toward progress and to the role of universities and faculties within such a context.

Our first task as members of the higher education community is not periodic evaluation of tenured faculty members but an evaluation of the general teaching and research environment of the university.

Not least among the internal pressures toward conformity, even toward a kind of orthodoxy, are the rapidly escalating demands of many students and faculty members that their institutions take official positions on various issues.

Sadly, faculties are often as guilty as the public in their intolerance for alternative ideas.

We must once again commit ourselves to attaining openness, objectivity, independence, and variety in the academic setting. If we should fail in this goal, academic freedom and tenure would simply become euphemisms for job security and the status quo instead of ensuring an independent group of scholar-teachers.

Academic freedom is, of course, never absolute. It is instead one of many values that must coexist in an increasingly complex world. Moreover, the phrase “academic freedom” suggests at once too much and too little. On the one hand, it proposed the possibility that teaching and research can be free of constraints. On the other hand, it fails to acknowledge that the ever-present limits on those activities that result from other values that we hold...restrictions of time and resources, professional ethics, establishment procedures and paradigms, the scientific method itself.

Is tenure simply an artifact of the rise of the new science in the 19th century and the consequent change in the role of the university? Will tenure become unnecessary if society finds alternatives to the scientific method or devises other institutions to share the current role of our universities? Clearly, there are already places where scholars without the full benefits of academic freedom and tenure are developing important new insights in many areas.

It is clear that society’s continued commitment to progress, change, and the role of inquiry will determine both the future of tenure and the future of the university.

AAU-PC
Stan Katz

Emergence of new conservative groups aiming to accack campuses.

Changes since 1960s
i) demographic change--brought new people into university...committed to cultural identity rather than assimilation
ii) feminisms
iii) curriculum (women’s studies, afro studies)
iv) failure to replace 40s, 50s concept of general education
v) disappearance of liberalism as core of American life, general decline in faith about liberal values.
Components of PC attacks
   i) victim studies
   ii) commitment to traditional curriculum
   iii) affirmative action
   iv) philosophical absolutism--fear of relativism

Terribly important to begin to pound away on fundamental university values--to provide a rock upon which to base change.

Part of problem is that we are now enrolling groups with quite different values systems--inner city minority groups, etc--that make it far more difficult to deal with these issues.

Other side:
   i) PC is real--the left has a tendency toward intolerance
   ii) proponents of PC have a very strong ideological stance
       ...and also intolerance and regressive
   iii) the challenge is to keep the debate open
   iv) Have to face up to the fact that we have changed our campuses by making them more diverse..."preferential treatment"...rethink curriculum. Old paradigm of assimilation will not work any more. New people don't want to be melted down.
   v) need to redefine liberalism for 21st Century

Gray:
Problem is that universities are continually asked to do things which are not their first purpose. In particular, universities are asked to be ideal communities and ideal parents.

Concern that efforts of peace, compassion, the desire to build an ideal community have distracted us from the fundamental purpose of universities--we are a community of scholars, not an ideal community. We should encourage debate and disagreement.

Bok
Presidents are not perceived to be visible defenders of fundamental values against left and right. Much of concern about PC would be flunted if presidents would take a more visible stand. Presidents have become negotiators, mediators, and administrators...not leaders.

Schmidt
Very few people are articulating vision of university. The university is NOT about utility, but about understanding. Further, we must never compromise freedom of expression and freedom of thought. Finally, we should only evaluate people according to academic merit...not other issues over which we have no competence.

Vaclav Havel’s eloquent questions of Czechoslovakia are just the questions we should be asking ourselves
   "What kind of place is this?"
   "What are the principles that bind us together?"
   "What could we contribute to our community and to the world?"

America’s Decadent Puritans (The Economist)
The world views America with mixed feelings. Japanese will mention idleness and self-indulgence. Europeans mention philistinism and naivety. Others mention insensitivity, boorishness, materialism drugs, guns, crime; a television culture catering to the lowest common denominator of public taste, shocking contrasts of wealth and poverty, a moralistic and litigious approach to free expression. America attracts such bile partly because it is more self-critical than other nations. Hypocrisy is often in the eye of the beholder; how dare a European look down his nose at a country to whose universities his brightest fellow-citizens choose to flock.
To criticize America is to criticize what the future holds in store.
Nevertheless, the Economist is concerned about a phenomenon that might be called "decadent puritanism" in America...an odd combination of ducking responsibility and telling everyone else what to do.
The decadence lies in too readily blaming others for problems, rather than accepting responsibility oneself.
America’s litigiousness is virtually banishing the concept of bad luck. To allow legal redress for negligence, or to seek to rehabilitate rather than punish victims are worthy aims. But fair redress is not always appropriate; sometimes the buck must simply stop.
Just as an over-padded welfare state breeds a habit of blaming and expecting help from government, so America’s legalism breeds a habit of shifting burdens on to somebody else.
Another facet of this phenomenon is the warped idea that the problem with America’s underclass is a lack of self-esteme, ad that the answer to poor educational performance is to teach more self-esteem. Bunk.
The characteristic that in the past drove generations of immigrants from the underclass to prosperity was not self-esteem, it was self-discipline. The reason that Japanese schoolchildren—and the children of Asian immigrants in America—learn so much more than their American counterparts is discipline, not self-esteem.
There are few countries on earth in which people are generally less prejudiced about color than America. Yet there are few countries where the issue looms so large; where pressure groups are so quick to take offence at a careless remark, or where words are made to carry such a weight of meaning.
Some universities, egged on by their students, have recently imposed disgraceful restrictions on free speech rather than let bigots speak out on campus and be judged for what they are.
As for puritanism, America’s search for fairness has begun to conflict with its famous tolerance for new peoples, new ideas, and new technology. A conformist tyranny of the majority, an intolerance of any eccentricity, is creeping into America.
As Americans get even richer, they seem to grow more risk-averse, so that they become paranoid about hazardous waste in their district, obsessed with their cholesterol levels, etc.
*If we are all to enjoy the 21st century, America must lighten up a bit.*

Schmidt

The most serious problems of freedom of expression in our society today exist on our campuses. On many, freedom of thought is in danger from well-intentioned, but misguided efforts to give values of community and harmony a higher place in the university than freedom.
The public, the press, the courts, and even Congress are coming to comprehend the critical dimensions of the issue of freedom on campus, but still tend to regard the university as a place apart.
When it comes to issues of freedom in the university, many editorialists seem more inclined to the model of Mr. CHips than Oliver Wendell Holmes, indulging paternalistic views of universities as places where speech ought to be temperate and well-mannered rather than wide-open, uninhibited, and free.
Perhaps the most important lesson universities can teach their students is to think and search for truth in freedom. For most students, this
lesson is not easy. They come to universities with little or no understanding of the theory and practice of freedom of thought.

Two disturbing tendencies:

i) general anxiety in our society that is eroding our commitment to enduring principles in our national life...near miss with flag-burning as an example

ii) uncertainty and confusion that current prevails in colleges about the fundamental principles and values on which the enterprise of higher education rests, or ought to rest.

Example include the exposure of the curriculum to the crudest pressures of the volatile politics of the campus, the willingness of universities to do practically anything anybody will pay for, the flabbiness of the traditions of liberal education, and big time athletics.

What is troubling is how little academic values and principles are pushing back against these pressures in our universities.

Universities have become saturated with politics, often of a fiercely partisan kind. Universities have indeed become the anvil on which young people and old beat our their resentments at the incompleteness of life. The economic and political insecurities of universities, from within and without, have produced a style of academic leadership that tends to be highly risk-adverse, queasy about defending academic values, and inclined to negotiate and propitiate about almost anything.

Little resistance to growing pressure to suppress and to punish, rather than to answer, speech that offends notions of civility and community.

The campuses are heedless of the oldest lesson in the history of freedom of expression, which is that offensive, erroneous, and obnoxious speech is the price of freedom.

Vague and unpredictable possibilities of punishment for expression on campus not only fly in the face of the lessons of freedom, but are in addition antithetical to the idea of the university.

Why should freedom of thought be the essence of a university.

The aim of teaching and learning in the university is to light the search for knowledge with the spark of imagination, to liberate the mind from thinking that is inert, habitual, dulled by convention.

Because ideas to live, because imagination is the key to wisdom, Mill was surely right that if we suppress that which we are sure is error--even very offensive and dangerous error-we lose a benefit nearly as great as truly itself, namely, “the clearere perception and livelier impression of truth, produced by its collision with error.”

Values of civility, mutual respect, and harmony are rightly prized within the university. But these values must be fostered by teaching and by example, and defended by expression. It is both futile to seek to advance them by suppresssion and an inversion of the values that underlie the academic mission. If fear, ignorance, and bigotry exist on our campuses, it is far better that they be exposed and answered than that they be bottled up.

Two examples of problems:

Problem of disruption of unpopular and controversial speakers:

Since the Vietnam war, universities have lived with the threat of disruption whenever anyone comes to campus with a controversial message.

And yet most universities do little to stop this. Free speech and unorthodox thaining are easily intimidated.

The university should virtually never bow to threats of disruption or even violence against an unpopular speaker. The university should not encourage or connive in a withdrawal of an invitation to an unpopular speaker.

The problem in the way that universities respond to lawless disruption or threats leveled against unpopular speakers is not so much the articulation of proper principles of academic freedom, but rather the vigor which which universities choose to defend their principles.

Second, and more vexing, concerns the use of university authority to suppress freedom.
The chilling effects of vague powers to punish offensive speech are likely to be far more damaging to freedom of expression than the actual applications of such rules.

It is one thing to be offended by speech, it is another altogether to be directly threatened by words accompanied by menacing behavior.

This is why our legal tradition has recognized that to serve the interests of freedom as well as of order, threats should be punished, including what the courts have termed “fighting words”: a face-to-face insult to a specific person that is so abrasive that it threatens and threatens to provoke a violent act.

But the line between threats and fighting words and offensive speech is difficult to determine...particularly by amateurs. Yet many universities have adopted rules which empower groups of faculty and students with roving commissions to punish offensive speech.

The chilling effects on speech of the vagueness and open-ended nature of these codes are compounded by their enforcement by students and faculty who are untutored in the most rudimentary lessons of the history of freedom, and who have in many cases acted and spoken in the belief that general offensiveness and breaches of civility by means of speech should be punished, even if freedom of expression on campus is the loser.

University officials who learn of speech on their campus that does demean or denigrate minorities should lead in the effort to respond to such cruel and callous slanders. But they should not forbid it. It does not follow that because the university is committed to nondiscrimination, it should suppress any speech than can plausibly be thought to be racist. What is racial prejudice, after all, but a particularly vicious form of ignorance and fear? It is precisely the function of free expression to dispel ignorance and fear with the light of truth. A university ought to be the last place where people are inhibited by fear of punishment from expression ignorance or even hate, so long as others are left free to answer.

He has heard the argument that uninhibited freedom of speech was somehow more appropriate in the days when our universities were more homogenous, while current conditions of far greater racial, religious, and cultural diversity call for controls in the interest of harmony and community. It is precisely societies that are diverse, pluralistic, and contentious that most urgently need freedom of speech and freedom of religion.

Autonomy and the Ties Than Bind

General Themes

The integrity and autonomy of the university supported by society are, of course, always dependent on the attitudes of that society toward the importance of protecting that autonomy and integrity.

Public institutions are increasingly affected by external influences, constraints, pressures, control.

Parochialism and demands for accountability are forces leading to increased state control and decreased autonomy.

Institutional autonomy is dependent on the attitudes of the public that it being served.

Intellectual Autonomy

Not merely to accumulate and disseminate knowledge, but to assume an independent questioning and analytical stance toward popularly accepted judgments and values.

Swimming against the stream should be their best and truest form of exercise.

Liberal Education

“A liberal education will not make life easier, but it will or should help to enrich and expand its
possibilities...it will or should make intellectual integrity, respect for reasoned conclusions, and the willingness to make difficult decisions in the light of complex alternatives and relationships a goal and a responsibility that we refuse to evade. (Gray)

Intellectual change

The cumulative effect of a number of diverse lines of scholarly inquiry in this century has been to erode seriously the notion that there is any coherent core of unchallenged wisdom to which more modern learning can be attached as the spoke of a wheel to its hub.

To much of what most matters to use in modern thought challenges universal premises and subverts claims to authority. In composing a curriculum, we cannot deny the force of the theory of relativity, the uncertainty principle, psychoanalysis, cultural relativism and feminism, to cite only a few of the modes of thinking that have profoundly unsettled old assumptions about universality and authority...(Brooks)

It is the central business of universities to conduct precisely those endless forms of testing, refining, and reformulating human knowledge that all too often become the subject of partisan attacks. But we provide certain shields:

i) tenure
ii) admissions standards

Must be careful in accusing universities of failing to discover the "product" for which they have been socially chartered and supported: suitably imprinted college graduates with standardized values and useful skills.

Research universities are not merely educational establishments within the commonly used, narrow definition. They are also, even primarily, institutions for the advancement of knowledge.

No small part of the remarkable success of American university-based research is due to the unwritten "social contract" that was drawn up with the larger society in the years after WWII. Its autonomy and "creative separateness" were, in effect, underwritten by a broad consensus that must have existed at that time.

The wide-ranging grant of autonomy is unquestionably the crucial return scientists and scholars receive under this social contract.

It is the state of all disinterested research scholarship to accept controversy and a lack of consensus not only as tolerable but as a normal state. We think of solutions to problems as generating not truths but a cascading selection of new problems.

It is the freedom in principle, obviously qualified by considerations of funding and institutional setting, to work on "discovered" as opposed to "presented" problems. This substantial degree of individualized control over the direction, scale, methodology, and pace of our investigations, is a defining characteristic of the realm of basic research in universities.

Academic Freedom

There are three traditions--academic freedom, tenure, institutional autonomy--with roles so instrumental in the development of American higher education that it is not surprising to find them formalized as
doctrine and comprising a central part of the rich legal history of higher education.

Allowing for some disparity between the law and actual practice, it is fair to suspect that a certain amount of mythology is attached to each tradition.

"Academic freedom is that aspect of intellectual liberty concerned with the peculiar institutional needs of the academic community. The claim that scholars are entitled to particular immunity from ideological coercion is premised on a conception of the university as a community of scholars engaged in the pursuit of knowledge, collectively and individually, both within the classroom and without, and on the pragmatic conviction that the invaluable service rendered by the university to society can be performed only in an atmosphere entirely free from administrative, political, or ecclesiastical constraints on thought and expression."

Academic freedom can be most directly traced to late 19th century German higher education traditions of Lernfreiheit (freedom to teach) and Lehrfreiheit (freedom to learn). Tenure is thought to be traceable to the AAUP efforts beginning in 1915.

Institutional autonomy finds its antecedents in the social organization of the Middle ages. It is clear that each of these traditions reflects a common concern with possible intrusions by "outsiders" (e.g., politicians, bureaucrats, the church) into the internal and essentially academic affairs of colleges and their faculties.

Within certain limits, there may be said to be 2 worlds which often overlap, are in continual conflict with each other, and yet are highly interdependent:

i) one the academic

ii) the other, a melange composed of political, religious, governmental, economic, and general society interests.

Universities have endeavored to equate academic freedom and its attendant focus upon the classroom with "institutional autonomy", which effectively insulates virtually all decisions even remotely bearing upon the university's "educational mission".

As a general proposition, the government may concern itself with education policy, but not academic policy. This means that the government can prescribe the broad character of the curriculum for a particular institution, provide what general areas are to be emphasized or omitted. But it may not prescribe the more immediate details of course content, methods of presentation, research, and similar matters that involve questions of academic competence.

Government, through its legislative, executive, and judicial arms, has exceeded the appropriate level of involvement in institutional matters. However universities have the ability—even the responsibility—to diminish government intrusiveness by developing internal mechanisms of accountability.

It is not only governmental authorities that are exerting influence on the academic establishments. The private sector is also exerting its influence through new research ties.

In a 1957 decision, the Supreme Court defined the 4 essential freedoms of a university:
i) to determine who may teach  
ii) to determine what may be taught  
iii) to determine how it may be taught  
iv) to determine who may be admitted to study

"For society's good, political power must abstain from intrusion into this activity of freedom, except for reasons that are exigent and obviously compelling."

Governance

Because immediate and direct and partisan political control is inimical to character of university, legal responsibility has in nearly all cases been placed in a lay board of trustees or regents.

Although "public control" is one element of the publicness of the state university, it is only one element which, if divorced from others, is made relatively meaningless. For example, if all direct public support were withdrawn from the state university, it is difficult to see what essential distinction would remain between a public and private university, regardless of how the board of trustees was appointed.

Some political fatures have yielded to the temptation to "run against" the university.

In some states there is even a question as to whether there will continue to be an identifiable institution with the distinctive characteristics of "the" state university--a "capstone" of the state's educational system. There is the possibility that functions, programs, responsibilities, will be so dispersed as to arrive at a "common level" among the various institutions in the state.

Can a state maintain an institution which is distinctive in terms of the mission of exemplifying the highest quality in advanced graduate and professional education, in research, in comprehensiveness in terms of student body, programs, and statewide responsibility? Will such a university have the necessary autonomy, integrity, freedom from political interference, and bureaucratic controls?

It should be noted that in every state in which a distinctive state university did not exist--it has been found necessary and desirable to create one.

In some states it may be that the centripetal forces of poltiical and educational regionalism, the tempting but destructive urge to involve higher education in partisan politics, will prevail for a time. If so, the quality of all higher education will suffer, and the distinctive and comprehensive role of the state university may be destroyed.

Even so, in the longer run it will again be found that it is bad politics as well as bad education to play partisan politics with higher education; freedom from centralized bureaucratic and political control is the essential ingredient of true efficiency in higher education; and that a truly comprehensive state university is an essential component of a public higher education system of high quality.

The state university as a traditional standard-setter is in a particularly vulnerable position. It may be
attacked for being too elitist if it sets high admissions standards, or wasteful if it admits unqualified students.

It cannot begin to meet all the legitimate demands for the use of its unique resources. In making hard choices, it may creative hostility and ill will.

Much of the concern over academic governance in higher ed can be broken down into two major components:

i) origins and meaning of the "private" and "public" distinction among colleges

ii) legitimacy of lay or non-resident trustee control versus faculty control.

Lay boards were actually European creations. Even in Europe, faculty-run universities were either a myth or a disaster.

"Left uncontrolled by external agencies, even academics tend to lose sight of the obligations held for them by the environging society". (Crowley).

The modern university is and should be influenced by a multiplicity of groups, formal and informal, both inside and outside.

Giammatti asserts that Yale must receive public financial support, particularly from the feds, if it is to survive. It must also serve the public interest by educating students for citizenship.

If the private institution must serve the public, Giammatti makes it clear that the public must not try to regulate or control the university nor influence it in less direct ways. The private university must responsibly resist the role of the federal government while accepting, of course, its money.

"Public Authority" and the Lay Board

A mixed entity of emperors and popes, ministers of education, grants committees....

However, everywhere, regardless of the origin of the system there has come to be a public authority.

The lay board has been the distinctive American device for "public" authority in connection with universities (although the device was used in 16th century Holland).

Beyond the lay board in the state universities are the state department of finance and the legislature and the governor with a tendency toward increasingly detailed review.

Through all of these devices, public influences have been asserted in university affairs.

The idea of a lay board is a uniquely American concept. The boards traditionally have three roles:

i) they appoint the university leadership

ii) they buffer it from undue intrusion

iii) they hold the university accountable to the needs of the public.

There seems to be misunderstanding about the nature and the role of the board. There seems to be a major difference in the role of public and private boards.

Every board

i) needs to support and nurture the president

ii) needs to encourage the president to be prudent, yet to undertake essential risks

iii) needs to create the right incentives for proper
leadership
Yet few public presidents, as compared with private, indicate that these functions occur.

Problem is that public boards tend to focus on narrow forms of accountability.

i) Too much of the time they concentrate on administrative rather than policy issues

ii) Boards should focus on strategic and assessment goals

iii) Because there is not adequate trust in the board, presidents frequently direct them toward administrative trivia, an approach that over the long term, is always self-defeating.

iv) Few boards spend any significant portion of their time on the urgent questions of educational policy.

Some UM history:

When UM was created as the "Catholicism or university of Michigan" in 1817, it was run by faculty. In 1821, a board of trustees was appointed and presided over by the governor. In 1850, the constitution called for popular election of 8 Regents. Moreover, the Board was authorized to "have the general supervision of the university and the direction and control of all expenditures from university funds."

Constitutional autonomy

General Aspects

Constitutional status:
Practice of providing in state constitutions for vesting of exclusive management and control of the institution in the governing board, presumably to the exclusion of state executive and legislative officials
E.g., Michigan, Minnesota, California, Colorado,...

Statutory status:
Leaves the institution more open to intrusions by politicians
E.g., Alabama, Arizona, Missouri,...

Actually CS may not be the key. The public confidence in the university and the tradition of higher education in the state can frequently be more important that CS in securing autonomy.

A fundamental shift is taking place in public attitudes toward higher education which are effecting both CS and SS institutions. The popular press has referred to the public frame of mind as the new populism. Whatever the level, a wholesale reevaluation is going on in peoples opinions about the value of higher education. Distinctions among different types of institutions are becoming blurred.

Only part of the shift is coming from taxpayers revolt or concerns about quality. More important are suspicions that not everyone benefits from colleges and that institutions engage in self-aggrandizement.

As one governor noted: "The most threatening general thing affecting higher education is the state of mind of the voters, the people. They are dissatisfied. Politicians will prey on their dissatisfaction."
Another noted: "Higher education is a good place to cut the budget these days. You don't get all the flak you might get elsewhere."

This has been aggravated by the tendency of some universities and their representatives to appear arrogant in their relations with the public and with state government.

The arrogance of a university is not related to CS. "Most great universities tend to be arrogant anyway, and CS does not affect the coefficient of arrogance".

"Autonomy for what and for whom."

In general, CS means that those matters clearly designated by the constitutions to be within the exclusive control of the university governing board are beyond the reach of the government. It also means that those powers clearly within the prerogatives of the legislature (e.g., the power to appropriate) or the executive (e.g., the governor's budget formulation and veto powers) are exercisable against even CS universities.

CS may simply provide institutions with stronger bargaining positions. The CS university may be able to fight somewhat longer before bowing to pressure. Compromise about lesser matters as a short-run tactic to retain the freedom to act on more major ones may preserve independence. But the danger lies in such acquiescing tactics becoming a long-term mode of operations so that subsequently a court may interpret past compliance as a legal abdication of institutional autonomy.

In the long run, institutional autonomy rests primarily on the amount of trust that exists between state government and institutions of higher education. That trust colors relationships between the two sectors so much that talk of the marginal effects of legal status pale into insignificance.

The power of the university to protect itself and the academic values it is assumed to have from political and bureaucratic interference rests primarily on public trust and confidence.

The real value of CS may lie in the role it plays in giving the university time to reestablish public confidence in its substantive value to the state.

Michigan's Status

Each state constitution has reaffirmed the autonomy of the Regents, and this has been upheld by the courts.

Hence, created by the constitution, the Board was as firmly founded as the legislature, governor, judiciary, and was equal in its power over its designated field of state endeavor. It was a coordinate branch of state government, and unique among state universities.

This was reaffirmed by the courts several times, notably in 1896 when it ruled:

i) Regents and legislature derive their powers from the same supreme authority, the constitution, and therefore neither can encroach on the other.

ii) power of Board are defined by the constitution, whereas those of every other corporation provided for in constitution are said to be such as legislature shall give.

iii) Power of general supervision given Board is sufficient for their authority and excludes any subsequent directions for running the University from the legislature.

This was reaffirmed in 1908 and 1963.

The constitution directed the Board to elect a president of
the University who should preside, without vote, at all their meetings. Since he was obviously the executive officer of the University, the Regents were slyly relieved of administration; they needed only to determine policy. And, once again, it is our constitutional status which, in the end, protects us from the slings and arrows of outrageous fortune in Lansing -- or better put, opportunistic legislators. How do we maintain our valuable autonomy when the purse strings are held ever more tightly by state and federal government? Critical to preserve our freedom to serve as a critic of society... this is more important than full funding "Constitutional" universities held by the courts to have equal legal autonomy with the legislative and judicial branches of government face the problem of the balance between wise and necessary cooperation in planning and coordination, and legal resistance to gross erosion of their cherished and hard-won status.

An Historical Perspective "By 1851 the University had experienced all the troubles that were to occur again and again, until it seems as though they must be endogenous to the nature of a university: i) political meddling by the state legislature ii) financial squeezing until a crisis is reached iii) intrusion of the Board of Regents into educational operations that are of faculty concern iv) factionalism among the faculty v) rowdy or lawless student behavior outside of class vi) irritations between town and gown Almost nothing new can be added to this list of recurrent maladies since that time; neither have permanent solutions been found. (H. H. Peckham, The Making of UM...)

Michigan Mandate Multiculturalism vs Particularism (Ravitch) Of course students should still study Western culture, and they should learn about the emergence of the democratic ideology and the concept of individual freedom that have been so crucial in the history of the world. But they must also learn about the cultures of Asia, Africa, and Latin America. These all represent complex civilizations, containing many cultural groups and different languages. The real issue on campus is not whether there should be multiculturalism, but what kind there is. Two versions presently compete: i) One approach reflects cultural pluralism and accepts diversity as a fact ii) The over represent particularism and demands loyalty to a particular group. The two coexist uncomfortably, because they are opposite in spirit and purpose. The pluralism approach recognized that the common American culture has been shaped by the interaction of the nation’s many diverse cultural elements. It sees American culture as the creation of many groups of immigrants, Native Americans, Africans,... yielding a culture that demonstrates the comingling of diverse cultures in one nation. Paradoxical though it may seem, the United States has a common culture that is multicultural. The particularist approach to American culture can be seen most vividly in ethnic-studies programs whose goal is to “raise the self-esteem” of students by providing role models. Particularists seek to attach their students to their ancestral homelands as the source of their personal identity and authentic culture. The pluralists promote a broader interpretation of common American culture by recognizing first that there IS a common culture, and second
that it has been created by many groups. At its most basic, our common culture is a civic culture, shaped by our Constitution, our commitment to democratic values, and our historical experience as a nation.

The cohesive element in the pluralistic approach is the clear acknowledgement that, whatever our differences, we are all human. Particularists have no interest in extending American culture; indeed, they deny that a common culture exists. They do not appeal to the common good, because their idea of community is defined along racial or ethnic lines. They espouse a version of history in which everyone is either the descendant of victims or of oppression. By doing so, ancient hatreds are fanned and recreated in each generation.

Particularism has spurred a separatist ethic in higher education. Students are taught to believe in the subject, to immerse themselves in its truths, and to champion them against skeptics. They are taught to believe, not to doubt or criticize.

The severing of such courses from established disciplines probably encourages separatism and ideological extremism.

The essential difference between pluralism and particularism is that the former actively combats ethnocentrism and the latter purposefully teaches it. Yet ethnocentrism is the spectre that has been haunting the world for centuries—causing war, injustice, and civil conflict.

The purposes of education should be not to reproduce and reinforce the prejudices of our inherited culture.
