

DEDICATION

This dissertation is dedicated to all of my former students in Detroit. Although you called me teacher, I was the one who was learning. Thank you!

I also dedicate this work to my mother and father, Joyce and Jim Stockdill, who first taught me the value of education and critical thought.

ACKNOWLEDGEMENTS

They say it takes a village to raise a child... I have come to the conclusion that, at least in my case, it took a village to write a dissertation. My wife Carla and my sons Andres and Emiliano were by my side during this long journey and always supported me with great encouragement. Importantly, they also made sure I never forgot to take a break from writing when I needed to have some fun. My brother Brett provided invaluable advice and consistent encouragement, as well as insightful editing assistance in the final stretch. My parents kept me moving forward at all times and set me on this journey early on in life, although I didn't know it then. My in-laws Pilar and Atilio kept me fed and helped out in ways too numerous to mention; their support made the final months of work possible. Lots of other family members including the Mackenzies and the extended Garay Marroquin family provided much needed encouragement as well.

My committee members provided amazing feedback and support during this process and helped me see what I was really trying to argue. Carla O'Connor and Jesse Hoffnung-Garskof asked the right questions at the right times and their insight was incredibly valuable. Bob Bain provided detailed and thought-provoking feedback, and he has been a great mentor and guide for me during graduate study. I greatly appreciate his support and assistance throughout my time at Michigan. My advisor and committee chair, Elizabeth Moje, has been an amazing teacher and mentor to me as well, and I am extremely grateful for her support and guidance. Her ongoing feedback, support, and

guidance – as well as consistent pushing of my thinking – challenged me in all the right ways.

I am also grateful for the support of the National Academy of Education and the Carnegie Corporation through the NAE Adolescent Literacy Predoctoral Fellowship which provided much needed support, mentoring, and networking during this entire study. In particular, I want to thank the scholars who mentored the predoctoral fellows, especially Catherine Snow, Mark Conley, Luis Moll, Susan Goldman, and Dick Anderson, all of whom provided helpful feedback. I also have to thank the 2009 cohort of fellows for their support and suggestions.

In addition, I have been fortunate to be part of a great community of graduate students at Michigan's School of Education, especially the participants in the Sopranos study group who listened to me many times and provided me with lots of great insight from the very beginnings of the project until the very end. My colleagues in Cohort 1 also provided friendship and encouragement, as did my ALD colleagues. I thank you all!

My teaching colleague John Boutros helped out by providing me a space in which to work ... I owe him a great debt. I want to thank other former colleagues as well, including Alec, Linnette, Eva, Juan S. and others who helped remind me why this work was important. I owe a great deal to the participants in this study as well, and I hope they learned as much as I did in this experience.

Finally...I want to thank all of those people who, once upon a time, were my teachers and who helped me begin this long journey. Their names are too numerous to mention, but many of them inspired me to continue learning and sharing with others.

ABSTRACT

Disjuncture, Design, and Disruption: Bridging the gap between students' everyday and academic knowledge through historical inquiry

by

Darin B. Stockdill

Chair: Elizabeth B. Moje

This dissertation presents my findings from the design study, Teen Empowerment through Reading, Research, and Action. In this study, I designed and implemented both an after-school and in-class historical research program on a local problem with students in one high school in a Midwestern city during the 2009-2010 school year. I used Constant Comparative Analysis with a range of data sources including field notes, student work, surveys, and student achievement data from the school, to explore the following research questions:

- What decisions were made during the process of designing this program and what principles drove my design process?
- What decisions and changes were made in the process of implementing this instructional design and why were they made?

- What were the affordances and challenges provided by this particular instructional design and what did I learn from them?

Analyzing data from the development and enactment of the design, I found that the instructional design introduced a different cultural model of learning into the classroom, one that did not always align with, and even disrupted, students' deeply ingrained patterns of classroom learning. As a result, and despite the fact that I had considered factors such as student interest, student skill and knowledge, and text complexity, I still faced a range of instructional dilemmas during implementation. To resolve emerging problems, I made a range of interactive decisions which attempted to shift the structure of learning activities. These choices often targeted the interactive space between readers, texts, activity, and context (Rumelhart, 1984; Snow, 2002) and attempted to reframe their interaction.

In particular, the instructional design challenged students at times with texts and activities which came into conflict with their past experiences of, and expectations for, history learning. Nevertheless, the design also offered students many important opportunities to engage with texts in a process of inquiry they found interesting and engaging. Through this analysis, I discuss the types of choices and dilemmas experienced teachers face when implementing innovative curricula and argue that new designs must actively seek to disrupt pre-existing cultural models and practices of learning with which they do not align.
