Identification of Responsive Cells in the Developing Somite Supports a Role for β-Catenin-Dependent Wnt Signaling in Maintaining the DML Myogenic Progenitor Pool

Ian Brauner,1 Douglas B. Spicer,2 Catherine E. Krull,3 and Judith M. Venuti1*

Erratum accepted 6 December 2011

The original article to which this Erratum refers was published in Developmental Dynamics 239:222–236.

In the original published version of this article, the authors omitted part of their grant information. Please find it provided below.

ACKNOWLEDGMENT
Additional support was provided by the Maine Medical Center Research Institute Histopathology Core Facility as supported by NIH P20RR18789 (D.M. Wojchowski, PI).
